The thermostat helps control the engines temperature. If your car is running too hot and there is the proper amount of coolant in the car and it is not leaking, or your car is taking a long time to warm up, there is a very good chance your thermostat is bad and needs to be replaced.

Is your engine temp coming up sufficiently, i.e is the running temp around 80 degrees. Check this first. Bearing in mind this may take a good few mins of driving If the engine is not warming up then the fault could be a suck thermostat or none functioning heater booster. Check its switched on on the instrument cluster settings.

hi maestro - sorry to hear about your trouble. i'm not a mechanic, but some basic questions

---

come to mind. did your garage pressure test your cooling system? if they did, and found unexplained leakage, then head failure will be top of the list. btw, not all head failures result in coolant leakage to oil. i had a toyota with full head failure (not just gasket) that didn't mix oil and coolant at all.
