In many areas of science a basic task is to assess the influence of several factors on a quantity of interest. If this quantity is binary logistic, regression models provide a powerful tool for this purpose. This monograph presents an account of the use of logistic regression in the case where

missing values in the variables prevent the use of standard techniques. Such situations occur frequently across a wide range of statistical applications. The emphasis of this book is on methods related to the classical maximum likelihood principle. The author reviews the essentials of logistic regression and discusses the variety of mechanisms which might cause missing values while the rest of the book covers the methods which may be used to deal with missing values and their effectiveness. Researchers across a range of disciplines and graduate students in statistics and biostatistics will find this a readable account of this.

The tumultuous years of the French Revolution left France ' s prestigious decorative arts industries poised on the brink of ruin. It was not until after the fall of the monarchy and the ascendancy of the Consulat and Empire under Napoleon that they began to recover so that by the middle of the nineteenth century they stood at the pinnacle of their achievement. This book is the first in depth study of the renowned porcelain works at Sèvres during its virtual rebirth under the 47 year direction of the scientist, teacher, and administrator Alexandre Brongniart. Some 110 working drawings from the Sèvres Archive are reproduced here for the first time in color. They celebrate the high skill of the artists whose work often documented contemporary events in France. There are table services in the 'Egyptian' and 'Etruscan' taste as well as individual pieces that recall Napoleonic military campaigns. There are also exquisite Neoclassical decorations using motifs such as birds, butterflies, and insects that reflect the century ' s early fascination with the natural sciences. The repertoire

of nineteenth century eclecticism is evident in the output of Sèvres from the revival of Gothic and renaissance motifs to the outburst of naturalism. Eleven essays by leading authorities assess this dynamic period.

More than simply a paragon of Brazilian samba, Dona (Lady) Ivone Lara's 1981 Sorriso Negro (translated to Black Smile) is an album deeply embedded in the political and social tensions of its time. Released less than two years after the Brazilian military dictatorship approved the Lei de Anistia (the "Opening" that put Brazil on a path toward democratic governance), Sorriso Negro reflects the seminal shifts occurring within Brazilian society as former exiles reinforced notions of civil rights and feminist thought in a nation under the iron hand of a military dictatorship that had been in place since 1964. By looking at one of the most important samba albums ever recorded (and one that also happened to be authored by a black woman), Mila Burns explores

the pathbreaking career of Dona Ivone Lara, tracing the ways in which she navigated the tense gender and race relations of the samba universe to ultimately conquer the masculine world of samba composers. 33 1/3 Global, a series related to but independent from 33 1/3, takes the format of the original series of short, music-based books and brings the focus to music throughout the world. With initial volumes focusing on Japanese and Brazilian music, the series will also include volumes on the popular music of Australia/Oceania, Europe, Africa, the Middle East, and more.

The supply of reliable and safe water is a key challenge for developing countries, particularly India. Community management has long been the declared model for rural water supply and is recognised to be critical for its implementation and success. Based on 20 detailed successful case studies from across India, this book outlines future rural water supply approaches for all lower-income countries as they start to follow India on the economic growth (and subsequent service levels) transition. The case studies cover state-level wealth varying from US\$2,600 to US\$10,000 GDP per person and a mix of gravity flow, single village and multi-village groundwater and surface water schemes. The research reported covers 17 states and surveys of 2,400 households. Together, they provide a spread of cases directly relevant to policy-makers in lower-income economies planning to upgrade the quality and sustainability of rural water supply to meet the Sustainable Development Goals, particularly in the context of economic growth.

Itchy, Tasty Triumph Books As the United States devotes extensive resources to health care, evaluating how successfully the U.S. system delivers high-quality, high-value care in an equitable manner is essential. At the request of Congress, the Agency for Healthcare Research and Quality (AHRQ) annually produces the National Healthcare Quality Report (NHQR) and the National Healthcare Disparities Report (NHDR). The reports have revealed areas in which health care performance has improved over time, but they also have identified major shortcomings. After five years of producing the NHQR and NHDR, AHRQ asked the IOM for

guidance on how to improve the next generation of reports. The IOM concludes that the NHQR and NHDR can be improved in ways that would make them more influential in promoting change in the health care system. In addition to being sources of data on past trends, the national healthcare reports can provide more detailed insights into current performance, establish the value of closing gaps in quality and equity, and project the time required to bridge those gaps at the current pace of improvement.
