Curriculum problems are everywhere: alert observers with a practiced eye and educated mind will find it almost impossible to read a newspaper without discovering curricular issues. The media often report about educational reforms or even about curriculum wars with opposing parties fiercely debating the aims, content and organization of learning. Few people

analyze these trends and discussions from a curricular conceptual framework. In addition, people sometimes think that their curriculum approaches and problems are unique and context-specific. However, international experience shows us that we can learn a lot from curriculum issues elsewhere. This book aims to sharpen the eyes and minds of a broader audience in identifying, understanding, addressing and reflecting upon curriculum problems. It also aims to contribute to the increased exchange, discussion and reflection on all the current curriculum problems that form such a crucial part of learning worldwide.

learn and how to teach effectively, this important book examines the core concepts and central pedagogies that should be at the heart of any teacher education program. Stemming from the results of a commission sponsored by the National Academy of Education, *Preparing Teachers for a Changing World* recommends the creation of an informed teacher education curriculum with the common elements that represent state-of-the-art standards for the profession. Written for teacher educators in both traditional and alternative programs, university and school system leaders, teachers, staff development professionals, researchers, and educational policymakers, the book addresses the key foundational knowledge for teaching and discusses how to implement that knowledge within the classroom. *Preparing Teachers for a Changing World* recommends that, in addition to strong subject matter knowledge, all new teachers have a basic understanding of how people learn and develop, as well as how children acquire and use language, which is the currency of education. In addition, the book suggests that teaching professionals must be able to apply that knowledge in developing curriculum that attends to students' needs, the demands of the content, and the social purposes of education: in teaching specific subject matter to diverse students, in managing the classroom, assessing student performance, and using technology in the classroom.

*Handbook of Research on Science Teaching and Learning* Tsehai Publishers

Sponsored by the National Science Teachers Association, this handbook provides a uniquely comprehensive and current survey of the best research in science education compiled by the most renowned researchers. More than summaries of findings, the

content provides an assessment of the significance of research, evaluates new developments, and examines current conflicts, controversies, and issues in the major science disciplines: biology, chemistry, physics, and earth science.

This volume deals with the propagation of three-dimensional shock waves and their reflection from curved walls. It is divided into two parts. The first part presents a ray method. This is based on the expansion of fluid properties in power series at an arbitrary point on the shock front. Continuous fractions are used. Results for shock propagation in non-uniform fluids are given. The second part discusses the shock reflection from a concave body. The important shock-focusing problem is included. The work is supported by both numerical and experimental results. Many interesting features, such as formation of a jet, vortices and the appearance of disturbances on the shock front, are discussed. Besides shock waves in gases, the distinctive features of shock propagation through a weakly ionized plasma are considered.

An award-winning scientist offers his unorthodox approach to childrearing: "Parentology is brilliant, jaw-droppingly funny, and full of wisdom...bound to change your thinking about parenting and its conventions" (Amy Chua, author of *Battle Hymn of the Tiger Mother*). If you're like many parents, you might ask family and friends for advice when faced with important choices about how to raise your kids. You might turn to parenting books or simply rely on timeworn religious or cultural traditions. But when Dalton Conley, a dual-doctorate scientist and full-blown nerd, needed

childrearing advice, he turned to scientific research to make the big decisions. In *Parentology*, Conley hilariously reports the results of those experiments, from bribing his kids to do math (since studies show conditional cash transfers improved educational and health outcomes for kids) to teaching them impulse control by giving them weird names (because evidence shows kids with unique names learn not to react when their peers tease them) to getting a vasectomy (because fewer kids in a family mean smarter kids). Conley encourages parents to draw on the latest data to rear children, if only because that level of engagement with kids will produce solid and happy ones. Ultimately these experiments are very loving, and the outcomes are redemptive—even when Conley's sassy kids show him the limits of his profession. *Parentology* teaches you everything you need to know about the latest literature on parenting—with lessons that go down easy. You'll be laughing and learning at the same time.

Jenna Fischer's Hollywood journey began at the age of 22 when she moved to Los Angeles from her hometown of St. Louis. With a theater degree in hand, she was determined, she was confident, she was ready to work hard. So, what could go wrong? Uh, basically everything. The path to being a professional actor was so much more vast and competitive than she'd imagined. It would be eight long years before she landed her iconic role on *The Office*, nearly a decade of frustration, struggle, rejection and doubt. If only she'd had a handbook

for the aspiring actor. Or, better yet, someone to show her the way—an established actor who could educate her about the business, manage her expectations, and reassure her in those moments of despair. Jenna wants to be that person for you. With amusing candor and wit, Fischer spells out the nuts and bolts of getting established in the profession, based on her own memorable and hilarious experiences. She tells you how to get the right headshot, what to look for in representation, and the importance of joining forces with other like-minded artists and creating your own work—invaluable advice personally acquired from her many years of struggle. She provides helpful hints on how to be gutsy and take risks, the tricks to good auditioning and callbacks, and how not to fall for certain scams (auditions in a guy's apartment are probably not legit—or at least not for the kind of part you're looking for!). Her inspiring, helpful guidance feels like a trusted friend who's made the journey, and has now returned to walk beside you, pointing out the pitfalls as you blaze your own path towards the life of a professional actor.

Part of the Prentice Hall Series in Educational Innovation for Chemistry, this unique book is a collection of information, examples, and references on learning theory, teaching methods, and pedagogical issues related to teaching chemistry to college students. In the last several years there has been considerable

activity and research in chemical education, and the materials in this book integrate the latest developments in chemistry. Each chapter is written by a chemist who has some expertise in the specific technique discussed, has done some research on the technique, and has applied the technique in a chemistry course.

**Matter, Force and Energy** Handbook of Research on the Role of Human Factors in IT Project Management This book is intended for use in Physics laboratories as a workbook for carrying out practical physics experiments by secondary school students and first year higher institution students. The objective is to have an all-in-one workbook from which various relevant physics experiments can be performed in a manner that also prepares students for practical physics examinations especially those of the West African Senior School Certificate Examination (WASSCE) and the National Examination Council (NECO).

Olivia James has never been one to walk on the wild side, at least not until she meets Seth Marc-a-cocky, sexy fighter at her father's gym. He's infuriating, nauseatingly addictive and she just can't seem to shake him. He's only been in town a short while and his name is already on everyone's lips. He's the kind of guy moms' warn their daughters about-the kind that leaves a trail of shattered hearts behind him and he has Olivia in his sights. Olivia has never met anyone as confusing as Seth and his hot and cold attitude constantly sends her reeling. She's never wanted anyone's touch so badly in her life, but having recently come out of a long term relationship diving into another is something she'd prefer to avoid. Determined for his touch, but not to let him under her skin, Olivia embarks on the most thrilling ride of her life.

This monograph analyses and describes successful educational actions with a specific focus on vulnerable groups (i.e. youth, migrants, cultural groups e.g. Roma, women, and people with disabilities). Concrete data that shows success in school performance in subject matters such as math or language will be provided, as well as children, teachers and families accounts of the impact of this success. Alongside, there is an analysis of the relationship between these children's educational performance with their inclusion or exclusion from different areas of society (i.e. housing, health, employment, and social and political

participation). Many studies have already diagnosed and described the causes of educational and social exclusion of these vulnerable groups. This monograph, however, provides solutions, that is, actions for success identified through the INCLUD-ED project, thus providing both, contrasted data and solid theoretical background and development. Some examples of these actions are interactive groups (or heterogeneous grouping in the classroom with reorganisation of human resources), extension of the learning time, homework clubs, tutored libraries, family and community educative participation, family education, or dialogic literary gatherings. All these actions have been defined as successful educational actions, which mean that they lead to both efficiency and equity. Finally, recommendations for policy and practice are included and discussed.

The global digital economy continues to demand the need for educated and highly trained professionals, requiring higher learning institutions to provide accessible technology-driven experience to prepare future leaders effectively. However, there are challenges involved in creating a robust curriculum

and recruiting top-notch faculty all over the world while also meeting the academic criteria to offer effective academic programs and degrees to students. The Handbook of Research on Challenges and Opportunities in Launching a Technology-Driven International University is a pivotal reference source that provides empirical and theoretical research focused on the effective construction of technology-driven higher learning international universities. While highlighting topics such as accelerated and innovative curriculum, recruitment of international faculty, on-campus development, and distance learning systems, this publication explores the financial and economic impacts of launching a university, and the methods of how to identify the appropriate locale for universities and/or branch campuses that will ideally complement the local interest of business sectors within the selected location. This book is ideally designed for entrepreneurs, practitioners, academicians, administrators, government officials, researchers, and consultants.

Since test items are the building blocks of any test, learning how to develop and validate test items has always been critical to the teaching-learning process. As they grow in importance and use, testing programs increasingly supplement the use of selected-response (multiple-choice) items with constructed-response formats. This trend is

expected to continue. As a result, a new item writing book is needed, one that provides comprehensive coverage of both types of items and of the validity theory underlying them. This book is an outgrowth of the author's previous book, *Developing and Validating Multiple-Choice Test Items*, 3e (Haladyna, 2004). That book achieved distinction as the leading source of guidance on creating and validating selected-response test items. Like its predecessor, the content of this new book is based on both an extensive review of the literature and on its author's long experience in the testing field. It is very timely in this era of burgeoning testing programs, especially when these items are delivered in a computer-based environment. Key features include ...

**Comprehensive and Flexible** - No other book so thoroughly covers the field of test item development and its various applications.

**Focus on Validity** - Validity, the most important consideration in testing, is stressed throughout and is based on the *Standards for Educational and Psychological Testing*, currently under revision by AERA, APA, and NCME

**Illustrative Examples** - The book presents various selected and

---

constructed response formats and uses many examples to illustrate correct and incorrect ways of writing items. Strategies for training item writers and developing large numbers of items using algorithms and other item-generating methods are also presented. Based on Theory and Research – A comprehensive review and synthesis of existing research runs throughout the book and complements the expertise of its authors.
