The Challenge Built to Last, the defining management study of the nineties, showed how great companies triumph over time and how long-term sustained performance can be engineered into the DNA of an enterprise from the verybeginning. But what about the company that is not born with great DNA? How can good companies, mediocre companies, even bad companies achieve enduring greatness? The Study For years, this question preyed on the mind of Jim Collins. Are there companies that defy

gravity and convert long-term mediocrity or worse into long-term superiority? And if so, what are the universal distinguishing characteristics that cause a company to go from good to great? The Standards Using tough benchmarks, Collins and his research team identified a set of elite companies that made the leap to great results and sustained those results for at least fifteen years. How great? After the leap, the good-to-great companies generated cumulative stock returns that beat the general stock market by an average of seven times in fifteen years, better than twice the results delivered by a composite index of the world's greatest companies, including Coca-Cola, Intel, General Electric, and Merck. The Comparisons The research team contrasted the good-to-great companies with a carefully selected set of comparison companies that failed to make the leap from good to great. What was

different? Why did one set of companies become truly great performers while the other set remained only good? Over five years, the team analyzed the histories of all twenty-eight companies in the study. After sifting through mountains of data and thousands of pages of interviews, Collins and his crew discovered the key determinants of greatness -- why some companies make the leap and others don't. The Findings The findings of the Good to Great study will surprise many readers and shed light on virtually every area of management strategy and practice. The findings include: Level 5 Leaders: The research team was shocked to discover the type of leadership required to achieve greatness. The Hedgehog Concept (Simplicity within the Three Circles): To go from good to great requires transcending the curse of competence. A Culture of Discipline: When you combine a culture of discipline with an ethic of entrepreneurship, you get the magical alchemy of great results. Technology Accelerators: Good-to-great companies think differently about the role of technology. The Flywheel and the Doom Loop: Those who launch radical change programs and wrenching restructurings will almost certainly fail to make the leap. "Some of the key concepts discerned in the study," comments Jim Collins, "fly in the face of our modern business culture and will, quite frankly, upset some people."

Perhaps, but who can afford to ignore these findings?

Drug overdose, driven largely by overdose related to the use of opioids, is now the leading cause of unintentional injury death in the United States. The ongoing opioid crisis lies at the intersection of two public health challenges: reducing the burden of suffering from pain and containing the rising toll of the harms that can arise from the use of opioid medications. Chronic pain and opioid use disorder both represent complex human conditions affecting millions of Americans and causing untold disability and loss of function. In the context of the growing opioid problem, the U.S. Food and Drug Administration (FDA) launched an Opioids Action Plan in early 2016. As part of this plan, the FDA asked the National Academies of Sciences, Engineering, and Medicine to convene a committee to update the state of the science on pain research, care, and education and to identify actions the FDA and others can take to respond to the opioid epidemic, with a particular focus on informing FDA's development of a formal method for incorporating individual and societal considerations into its risk-benefit framework for opioid approval and monitoring.

investigative journey that was life-changing—and lifesaving. Or our biochemistry is changing, raising our cholesterol, making us irritable, reactive, or "foggy." These—and other, more serious medical issues, like pre-diabetes and immune complications—hide a specific problem, for which food, not drugs, is the answer. So, if you're suffering from GI issues, fatigue, out-of-whack-hormones, mood and cognition difficulties, elevated cholesterol, blood sugar control problems, or an autoimmune problem, *Fast Metabolism Food Rx* has the solution for you. With targeted eating plans, you can feed your body back to a vibrant, energetic, and thriving state.

The story of one woman's struggle to care for her seriously ill husband—and a revealing look at the role unpaid family caregivers play in a society that fails to provide them with structural support. *Already Toast* shows how all-consuming caregiving can be, how difficult it is to find support, and how the social and literary narratives that have long locked women into providing emotional labor also keep them in unpaid caregiving roles. When Kate Washington and her husband, Brad, learned that he had cancer, they were a young couple: professionals with ascending careers, parents to two small children. Brad's diagnosis stripped those identities away: he became a patient and she his caregiver. Brad's cancer quickly turned aggressive, necessitating a stem-cell transplant that triggered a massive infection, robbing him of his eyesight and nearly of his life. Kate acted as his full-time aide to keep him alive, coordinating his treatments, making doctors' appointments, calling insurance companies, filling dozens of prescriptions,

cleaning commodes, administering IV drugs. She became so burned out that, when she took an online quiz on caregiver self-care, her result cheerily declared: "You're already toast!" Through it all, she felt profoundly alone, but, as she later learned, she was in fact one of millions: an invisible army of family caregivers working every day in America, their unpaid labor keeping our troubled healthcare system afloat. Because our culture both romanticizes and erases the realities of care work, few caregivers have shared their stories publicly. As the baby-boom generation ages, the number of family caregivers will continue to grow. Readable, relatable, timely, and often raw, *Already Toast*—with its clear call for paying and supporting family caregivers—is a crucial intervention in that conversation, bringing together personal experience with deep research to give voice to those tasked with the overlooked, vital work of caring for the seriously ill.

Using a consistent, logical, and step-by-step approach, MEDICAL TERMINOLOGY: A LIVING LANGUAGE, 5/e introduces students to the anatomy and physiology of body systems and the corresponding medical terms related to them. For each body system, broad coverage of anatomy, physiology, pathology, diagnostic procedures, treatment procedures, and pharmacology is provided. The author emphasizes both terms built from Latin and Greek word parts, and modern English terms, helping students develop a full working word part vocabulary they can use to interpret any new term. This edition contains many new terms, and has been reorganized for more efficient learning. To eliminate confusion, Word Building tables have been removed from each chapter and the terms have been distributed throughout the pathology, diagnostic procedure, and treatment procedure tables, where they are more immediately relevant to students.

PTCB Exam Study Guide 2020-2021 Rodale

The definitive investigation and expos é of how some of the nation's largest corporations created and fueled the opioid crisis—from the Pulitzer Prize-winning Washington Post reporters who first uncovered the dimensions of the deluge of pain pills that ravaged the country and the complicity of a near-omnipotent drug cartel. AMERICAN CARTEL is an unflinching and deeply documented dive into the culpability of the

drug companies behind the staggering death toll of the opioid epidemic. It follows a small band of DEA agents led by Joseph Rannazzisi, a tough-talking New Yorker who had spent a storied thirty years bringing down bad guys; along with a band of lawyers, including West Virginia native Paul Farrell Jr., who fought to hold the drug industry to account in the face of the worst man-made drug epidemic in American history. It is the story of underdogs prevailing over corporate greed and political cowardice, persevering in the face of predicted failure, and how they found some semblance of justice for the families of the dead during the most complex civil litigation ever seen. The investigators and lawyers discovered hundreds of thousands of confidential corporate emails and memos during courtroom combat with legions of white-shoe law firms defending the opioid industry. One breathtaking disclosure after another—from emails that mocked addicts to invoices chronicling the rise of pill mills—showed the indifference of big business to the epidemic ' s toll. The narrative approach echoes such work as A Civil Action and The Insider, moving dramatically between corporate boardrooms, courthouses, lobbying firms, DEA field offices, and Capitol Hill while capturing the human toll of the epidemic on America ' s streets. AMERICAN CARTEL is the story of those who were on the front lines of the fight to stop the human carnage. Along the way,

they suffer a string of defeats, some of their careers destroyed by the very same government officials who swore to uphold the law before they begin to prevail over some of the most powerful corporate and political influences in the nation.

A four-year investigation into the world of synthetic drugs—from black market factories to users & dealers to harm reduction activists—and what it revealed. A deeply human story, *Fentanyl, Inc.* is the first deep-dive investigation of a hazardous and illicit industry that has created a worldwide epidemic, ravaging communities and overwhelming and confounding government agencies that are challenged to combat it. “A whole new crop of chemicals is radically changing the recreational drug landscape,” writes Ben Westhoff. “These are known as Novel Psychoactive Substances (NPS) and they include replacements for known drugs like heroin, cocaine, ecstasy, and marijuana. They are synthetic, made in a laboratory, and are much more potent than traditional drugs”—and all-too-often tragically lethal. Drugs like fentanyl, K2, and Spice—and those with arcane acronyms like 25i-NBOMe—were all originally conceived in legitimate laboratories for proper scientific and medicinal purposes. Their formulas were then hijacked and manufactured by rogue chemists, largely in China, who change their molecular structures to stay ahead of the law, making the drugs’ effects impossible to predict. Westhoff has infiltrated this shadowy world. He tracks down the little-known scientists who invented these drugs and

inadvertently killed thousands, as well as a mysterious drug baron who turned the law upside down in his home country of New Zealand. Westhoff visits the shady factories in China from which these drugs emanate, providing startling and original reporting on how China’s vast chemical industry operates, and how the Chinese government subsidizes it. Poignantly, he chronicles the lives of addicted users and dealers, families of victims, law enforcement officers, and underground drug awareness organizers in the United States and Europe. Together they represent the shocking and riveting full anatomy of a calamity we are just beginning to understand. From its depths, as Westhoff relates, are emerging new strategies that may provide essential long-term solutions to the drug crisis that has affected so many. “Timely and agonizing. . . . An impressive work of investigative journalism.” —USA Today “Westhoff explores the many-tentacled world of illicit opioids, from the streets of East St. Louis to Chinese pharmaceutical companies, from music festivals deep in the Michigan woods to sanctioned ‘shooting up rooms’ in Barcelona, in this frank, insightful, and occasionally searing exposé. . . . Westhoff’s well-reported and researched work will likely open eyes, slow knee-jerk responses, and start much needed conversations.” —Publishers Weekly “Our 25 Favorite Books of 2019” —St. Louis Post-Dispatch “Best Books of 2019” —Buzzfeed “Best Nonfiction of 2019” —Kirkus Reviews “50 Best Books of 2019” —Daily Telegraph “Best Nonfiction Books of 2019” —Tyler Cowen “Best Books of 2019” —Yahoo Finance

The primary purpose of fitness and body composition standards in the U.S. Armed Forces has always been to select individuals best suited to the physical demands of military service, based on the assumption that proper body weight and composition supports good health, physical fitness, and appropriate military appearance. The current epidemic of overweight and obesity in the United States affects the military services. The pool of available recruits is reduced because of failure to meet body composition standards for entry into the services and a high percentage of individuals exceeding military weight-for-height standards at the time of entry into the service leave the military before completing their term of enlistment. To aid in developing strategies for prevention and remediation of overweight in military personnel, the U.S. Army Medical Research and Materiel Command requested the Committee on Military Nutrition Research to review the scientific evidence for: factors that influence body weight, optimal components of a weight loss and weight maintenance program, and the role of gender, age, and ethnicity in weight management.
