Foreword by Dr. Asad Madni, C. Eng., Fellow IEEE, Fellow IEE Learn the fundamentals of RF and microwave electronics visually, using many thoroughly tested, practical examples RF and microwave technology are essential throughout industry and to a world of new applications-in wireless communications, in Direct Broadcast TV, in Global Positioning System (GPS), in healthcare, medical and many other sciences. Whether you're seeking to strengthen your skills or enter the field for the first time, Radio Frequency and Microwave Electronics Illustrated is the fastest way to master every key measurement, electronic, and design principle you need to be effective. Dr. Matthew Radmanesh uses easy mathematics and a highly graphical approach with scores of examples to bring about a total comprehension of the subject. Along the way, he clearly introduces everything from wave propagation to impedance matching in transmission line circuits, microwave linear amplifiers to hard-core nonlinear active circuit design in Microwave Integrated Circuits (MICs). Coverage includes: A scientific framework for learning RF and microwaves easily and effectively Fundamental RF and microwave concepts and their applications The characterization of two-port networks at RF and microwaves using S-parameters Use of the Smith Chart to simplify analysis of complex design problems Key design considerations for microwave amplifiers: stability, gain, and noise Workable considerations in the design of practical active circuits: amplifiers, oscillators, frequency converters, control circuits RF and Microwave Integrated Circuits (MICs) Novel use of "live math" in circuit analysis and design Dr. Radmanesh has drawn upon his many years of practical experience in the microwave industry and educational arena to introduce an exceptionally wide range of practical concepts and design methodology and techniques in the most comprehensible fashion. Applications include small-signal, narrow-band, low noise, broadband and multistage transistor amplifiers; large signal/high power amplifiers; microwave transistor oscillators, negative-resistance circuits, microwave mixers, rectifiers and detectors, switches, phase shifters and attenuators. The book is intended to provide a workable knowledge and intuitive understanding of RF and microwave electronic circuit design. Radio Frequency and Microwave Electronics Illustrated includes a comprehensive glossary, plus appendices covering key symbols, physical constants, mathematical identities/formulas, classical laws of electricity and magnetism, Computer-Aided-Design (CAD) examples and more. About the Web Site The accompanying web site has an "E-Book" containing actual design examples and methodology from the text, in Microsoft Excel environment, where files can easily be manipulated with fresh data for a new design.

Between the two World Wars, the US contributed significantly to the development of the tank, a weapon invented by the British and the French seeking a way to break through the lines of German trenches. From the employment of the French Renault FT and British Mark V during their involvement in World War I, the US branched out with their own indigenous designs including the M1 Cavalry Car and the M2 Light and Medium tanks, the precursors to the Stuart and Grant tanks of World War II. Tank designers in this period faced unique challenges and so the story of early American armour is littered with failures amongst the successes. Featuring previously unpublished photos and fully illustrated throughout, Early American Armor (1): Tanks 1916 – 40 is essential reading for anyone interested in American armour, or in the development of tank design.

This book is the first detailed biography of Ernst Mayr. He was an 'architect' of the Synthetic Theory of Evolution, and the greatest evolutionary biologist since Charles Darwin, influential historian and philosopher of biology, outstanding taxonomist and ornithologist, and naturalist. He is one of the most widely known biologists of the 20th century. Mayr used the theories of natural selection and population thinking as theoretical models within the framework of historical biological studies. He was the first to emphasize the role of biopopulations, thereby pointing out the basic difference between 'population thinking' and typological essentialism.

Originally written in the 1950s, Guns of the Old West is a factual account of the guns used during, and after, one of the most romanticized and often misconstrued periods in American history. It covers a wide array of firearms, from the smallest of hideaway pistols - the Derringer - to the largest of Colt's single-action revolvers, the more recent Mauser "broomhandle," and the Colt 1911 auto pistol. Illustrated throughout, this book describes not only the evolution of fighting pistols and rifles during the 1800s and before, but also the men who created and used them. Of particular interest is the chapter titled "Frontier Life Insurance" that defines the code by which men lived and fought with their pistols. It was a time when the handgun was both a defensive and offensive weapon, much more than today, when it is considered mainly for defense. The chapter on "The Long Guns" covers the development of frontier rifles, from the famous Kentucky rifle of the plains and the mountain man's Hawken to the ever-popular Winchester lever actions.

The Junkers 87 Stuka was an iconic weapon of World War Two and an aircraft name that was, and still is, instantly recognized worldwide. Its roles in Poland and the Battles of France and the Low Countries are almost legendary, but in the UK its import during the Battle of Britain is one that has never been covered in any specific detail. Here, Andy Saunders takes a critical look at every operation by Ju87s against British targets in 1940 - including those on land and at sea. Each raid is charted, covering all aspects of the attacks including participants, defending RAF fighters and those on the receiving end. Myth and reality and truth and legend are all examined and analyzed in this highly illustrated new book, which adds to our knowledge of one of the most significant periods in the whole of British history. Foreword by Dr Hans Migeod, Ju87 Stuka pilot during Battle of Britain.

Knowledge, Innovation and Competence in Engineering of Mission Critical Systems

This book explores the critical role of acquisition, application, enhancement, and management of knowledge and human competence in the context of the largely digital and data/information dominated modern world. Whilst humanity owes much of its achievements to the distinct capability to learn from observation, analyse data, gain insights, and perceive beyond original realities, the systematic treatment of knowledge as a core capability and driver of success has largely remained

the forte of pedagogy. In an increasingly intertwined global community faced with existential challenges and risks, the significance of knowledge creation, innovation, and systematic understanding and treatment of human competence is likely to be humanity's greatest weapon against adversity. This book was conceived to inform the decision makers and practitioners about the best practice pertinent to many disciplines and sectors. The chapters fall into three broad categories to guide the readers to gain insight from generic fundamentals to discipline-specific case studies and of the latest practice in knowledge and competence management.

Most people know that there are 70 million Baby Boomers in America today...but what is less known is that there are approximately 100 million people in America between the ages of 16 and 30. This generation has just entered, or will soon be entering the work force. And they have no idea how to invest, save, or handle their money. Young people today come out of school having had little or no formal education on the basics of money management. Many have large debts from student loans looming over their heads. And many feel confused and powerless when their pricey educations don't translate into high paying jobs. They feel that their \$30,000-\$40,000 salary is too meager to bother with investing, and they constantly fear that there will be "too much month left at the end of their money." Douglas R. Andrew has shown the parents of this generation a different pathway to financial freedom. Now Doug and his sons, Emron and Aaron - both of whom are in their mid-20s - show the under-30 crowd how they can break from traditional 401k investment plans and instead can find a better way by investing in real estate, budgeting effectively, avoiding unnecessary taxes and using life insurance to create tax-free income. With the principles outlined in Millionaire by Thirty, recent graduates will be earning enough interest on their savings to meet their basic living expenses by the time they're 30. And by the time they're 35, their investments will be earning more money than they are, guaranteeing them a happy, wealthy future.

Already well-known for his bestselling series of exposés on secret Nazi technology and the survival of the Third Reich after the end of World War II, Oxford-educated historian and physicist Joseph P. Farrell here delves ever deeper into the activities of this nefarious group. In his previous works, Farrell has clearly demonstrated that the Nazis were clandestinely developing new and amazing technologies toward the end of WWII, and that the key scientists involved in these experiments were exported to the Allied countries at the end of the conflict, mainly the United States, in a move called Operation Paperclip. NASA director and developer of the Saturn V rocket that sent Americans to the moon, Werner von Braun, was one of these scientists. Farrell has traced the links between ongoing Reich activities and the newly-formed CIA and other defense/military/industrial establishments. Now, Farrell has meticulously reviewed the best-known Roswell research from UFO-ET advocates and skeptics alike, as well as some little-known source material, and comes to a radically different scenario of what happened in Roswell, New Mexico in July 1947, and why the US military has continued to cover it up to this day. Farrell presents a fascinating case sure to disturb both ET believers and disbelievers, namely, that what crashed may have been representative of an independent postwar Nazi power-an extraterritorial Reich monitoring its old enemy, America, and the continuing development of the very technologies confiscated from Germany at the end of the War.

In *Fighting Handguns*, author Jeff Cooper not only takes the reader through the development of this weapon from its beginnings in mid-16th-century Europe through the various iterations of single- and double-action revolvers and semiautomatic pistols, he also discusses some important aspects of carrying and shooting a fighting handgun under combat conditions. "For good or ill, man is a fighting animal. While most feel that this is an unmitigated evil, it may, like most aspects of nature, have its positive side. Certainly man's combative nature is responsible for most of the massive tragedy of history, but it's possible that history of any sort just wouldn't have happened had it not been characteristic of the race to struggle against its environment. And man's environment, of course, includes man. A placid, gentle, contented creature—a koala, for instance—is nice to contemplate but does not progress, and if it encounters a challenge it simply dies. Whether progress, at the price of a fighting disposition, is worth it is a question, but it's a bit on the academic side. Man is the way he is, and gets along as he must. Being human, we are involved in strife. Much as we may deplore this, we must master the techniques of strife or perish. "This book is devoted to one of these techniques—the one-hand firearm as used by man against man."—Jeff Cooper

This document summarizes the main findings and implications of the first empirical study investigating the scale and scope of arms trafficking on the dark web, which was conducted by RAND Europe and the University of Manchester from September 2016 to July 2017. There is an ongoing debate over the extent to which online black markets on the so-called "dark web," the part of the Internet not searchable by traditional search engines and hidden behind anonymity software, facilitate arms trafficking. Details have emerged in the media following the Munich shooting in 2016 linking the weapons used by the attacker to vendors on dark web marketplaces (also known as cryptomarkets). Some media reports have also linked the Paris terrorist attacks in November 2015 to these platforms. While these reports appear to have raised concerns about the role of such dark web markets in arms trade, evidence on the subject is largely anecdotal, based on secondary data as reported after events such as terrorist attacks or successful law enforcement operations.

Quotes, maxims, short stories to provoke thought and give tired warrior's purpose and direction. The author is the founder of the website Spotterup.com. Spotter Up has 35+ writers who are accomplished former or active duty members of the Special Operations community (Green Berets, Navy SEALs, Rangers, Marine Scout Snipers, S.W.A.T, etc.), master-level shooters, special agents, case officers, athletes, and outdoor enthusiasts who like to share their knowledge with anyone interested in learning more about subjects such as fitness, nutrition, shooting, martial arts, mindset, survival, and far more. The writers of Spotter Up have completed nearly 900+ gear reviews on subjects such as: footwear, body, tactical clothing, armor, optics, and firearms and is known as a credible site for its opinions by the tactical industry. Spotter Up is about "spotting" a problem and coming up with solutions. Spotter Up promotes the idea of the classical "whole" man found in ancient texts. For our modern day he is a person who aspires to be the GUNFIGHTER, WRITER, WILDMAN, MONK: Man of Action, Man of Intellect, Man of Emotion, Man of Spirit. Consider the Athenian ideal of a balanced education from the book *Greek Realities: Life and Thought in Ancient Greece*, By Finley Hooper "They could play some flute but should not neglect wrestling. They avoided the excesses of life. They might focus on music or philosophy but spent enough time so that their bodies did not become soft." Spotter Up is for anyone, whether they are military, law-enforcement, emergency response or not, that is searching for ways to become more well-rounded. *We Fight Monsters* is a collection of quotes, maxims, poems and more written and posted by the author originally on Instagram, over a four-year period of time, as a way to provoke thought, and simultaneously inspire men and women. The author of *We Fight Monsters* hopes it helps readers transcend the ordinary world by relishing the unexpected. The book was written because many of the followers of Spotter Up's social media sites stated, "the writing got me through some very hard times." The cover illustration is based off the Greek Hydra and the Hercules myth. Man has an internal struggle after he's battled a beast, and sometimes he must battle the beast within himself. He isn't a demigod. He's just a regular Joe who is a hero to many, that lives to win against evil. Maybe he's a Marine who did several deployments and lost some friends, maybe she's a cop fighting crime on the streets. The illustration symbolizes the brotherhood of man, (men and women), that fight the good fight despite experiencing PTSD, physical
