NEW YORK TIMES BESTSELLER • A leading political scientist examines the dramatic rise in violent extremism around the globe and sounds the alarm on the increasing likelihood of a second civil war in the United States “Required reading for anyone invested in preserving our 246-year experiment in self-government.”—The New York Times Book Review ONE OF THE BEST BOOKS OF 2022 SO FAR: Esquire, Financial Times Political violence rips apart several towns in southwest Texas. A far-right militia plots to kidnap the governor of Michigan and try her for treason. An armed mob of Trump supporters and conspiracy theorists storms the U.S. Capitol. Are these isolated incidents? Or is this the start of something bigger? Barbara F. Walter has spent her career studying civil conflict in places like Iraq, Ukraine, and Sri Lanka, but now she has become increasingly worried about her own country. Perhaps surprisingly, both autocracies and healthy democracies are largely immune from civil war; it's the countries in the middle ground that are most vulnerable. And this is where more and more countries, including the United States, are finding themselves today. Over the last two decades, the number of active civil wars around the world has almost doubled. Walter reveals the warning signs—where wars tend to start, who initiates them, what triggers them—and why some countries tip over into conflict while others remain stable. Drawing on the latest international research and lessons from over twenty countries, Walter identifies the crucial risk factors, from democratic backsliding to factionalization and the politics of resentment. A civil war today won't look like America in the 1860s, Russia in the 1920s, or Spain in the 1930s. It will begin with sporadic acts of violence and terror, accelerated by social media. It will sneak up on us and leave us wondering how we could have been so blind. In this urgent and insightful book, Walter redefines civil war for a new age, providing the framework we need to confront the danger we now face—and the knowledge to stop it before it's too late.

The German Shepherd, or Deutscher Schäferhund, used to be first installed as a breed in Germany in the late 1800s, the place it used to be created through combining the traits of a range of shepherd dogs. Shepherd dogs have been widely used in Germany for protecting and transferring livestock, and have been bred for traits such as intelligence, a calm demeanor, and the ability to work independently with the livestock, frequently without human direction. Some of the German Shepherd ancestors have been wolf-like, while others were heavier boned and lop-eared, and some had light coloured coats. The modern-day German Shepherd appears like a wolf, however is no more related to the wolf than any different breed of domestic dog.

ROBOTIC PROCESS AUTOMATION (RPA) software exploded on the stage of business technology in the mid-2010s and quickly became the fastest growing technology trend of the last fifty years. By 2020 RPA has grown into a nearly \$10 billion industry, and continues to grow at high-double-digit rates. RPA has been viewed as a miracle technology that allows companies to automate their persistent manual processes, making them better, faster and cheaper with nearly no cost or effort. The reality has proven otherwise. RPA promised fast, cheap and good automation of business processes, with return on investment measured in weeks or days. But, by 2018 reality began to settle in. RPA was more difficult than believed and the majority of organizations were failing with RPA, rather than succeeding. By 2020, the RPA wave was crashing and most organizations were scaling back, or abandoning, their RPA initiatives. In 2020, if you google the phrase "RPA implementation failure" you'll receive over 5 million hits. Thousands of clients are struggling to make their RPA robots, or "Bot", work correctly and generate the sorts of benefits promised. The vast majority of clients fail to realize the expected gains, and RPA has been seen to stumble as a result of these consistently-poor results. What happened to RPA, and more importantly, why is it failing? This book is the result of five years of effort in putting RPA to work for major organizations all over the world. "Bots" details the author's lessons-learned in deploying thousands of bots at dozens of leading organizations. In this book, he explains why bots are failing to deliver the goods, and what it takes to make bots work in your organization. Author Chris Surdak ("Data Crush" and "Jerk") summarizes the results of five years of effort in deploying hundreds of bots for dozens of organizations around the world. Along the way he experienced any number of failures, missteps, hyperbole and errors as people tried to learn how to use this new technology. "Bots" lays out the eighteen different ways that bots seem to "fail" and how to avoid those failures with your own bots. "Bots" also discusses the next wave of cognitive bots and artificial intelligence, and how these technologies are even more finicky and difficult to succeed with. Over the next ten years cyber workers like bots will subsume an enormous amount of the work currently performed by humans. Their adoption is inevitable. "Bots" is your guide for how to leverage these digital workers effectively, before your competitors do!
