Quotes, maxims, short stories to provoke thought and give tired warrior's purpose and direction. The author is the founder of the website Spotterup.com. Spotter Up has 35+ writers who are accomplished former or active duty members of the Special Operations community (Green Berets, Navy SEALs, Rangers, Marine Scout Snipers, S.W.A.T, etc.), master-level shooters, special agents, case officers, athletes, and outdoor enthusiasts who like to share their knowledge with anyone interested in learning more about subjects such as fitness, nutrition, shooting, martial arts, mindset, survival, and far more. Spotter Up is about "spotting" a problem and coming up with solutions. Spotter Up promotes the idea of the classical "whole" man found in ancient texts. For our modern day he is a person who aspires to be the GUNFIGHTER, WRITER, WILDMAN, MONK: Man of Action, Man of Intellect, Man of Emotion, Man of Spirit. Consider the Athenian ideal of a balanced education from the book *Greek Realities: Life and Thought in Ancient Greece*, By Finley Hooper "They could play some flute but should not neglect wrestling. They avoided the excesses of life. They might focus on music or philosophy but spent enough time so that their bodies did not become soft." Spotter Up is for anyone, whether they are military, law-enforcement, emergency response or not, that is searching for ways to become more well-rounded. *We Fight Monsters* is a collection of quotes, maxims, poems and more written and posted by the author originally on Instagram, over a four-year period of time, as a way to provoke thought, and simultaneously inspire men and women. The author of *We Fight Monsters* hopes it helps readers transcend the ordinary world by relishing the unexpected. The book was written because many of the followers of Spotter Up's social media sites stated, "the writing got me through some very hard times." The cover illustration is based off the Greek Hydra and the Hercules myth. Man has an internal struggle after

he's battled a beast, and sometimes he must battle the beast within himself. He isn't a demigod. He's just a regular Joe who is a hero to many, that lives to win against evil. Maybe he's a Marine who did several deployments and lost some friends, maybe she's a cop fighting crime on the streets. The illustration symbolizes the brotherhood of man, (men and women), that fight the good fight despite experiencing PTSD, physical injuries, loss of friends, lovers etc. "WE FIGHT MONSTERS. I'm not afraid of anything in this world that's been seen. I have scars on the inside. My badges of honor. There's a light inside my heart; it's for others to see. I live to show the way to those lost and in pain. And you? Walk with magnificence. Cock of the walk. Lead the way or follow those who use their pain to fight monsters and the injustices in this world" ~Michael Kurcina.

This book earns it's name! Over the course of 172 pages, I have taken all the great material in the first ed, and added to it a series of recipes and procedures which are very low profile and stunningly effective. This treasure trove of information features the Hardware Store Nitro recipe, fuel/air explosives, butt kicking ammonium nitrate formulations, nitromethane mixtures and a vastly improved detonator section. The fun doesn't stop there either. Read all about the construction of remote control cruise missiles and RC torpedoes. Claymore mines and air cannons add spice to the stew. Then top it off with my commentary on the easiest way to obtain all the materials one would need. I've read all the books on the topic of explosives, from tiny paperbacks to 600 page volumes written by PhDs. I have no hesitation saying I've topped them all!

Ballistic Imaging assesses the state of computer-based imaging technology in forensic firearms identification. The book evaluates the current law enforcement database of images of crime-related cartridge cases and bullets and recommends ways to improve the usefulness of the technology for suggesting leads in criminal investigations. It also advises against the construction of a national reference database that would include images from test-fires of every newly manufactured or imported firearm in the United States. The book also suggests further research on an alternate method for generating an investigative lead to the location where a gun was first sold: "microstamping," the direct imprinting of unique identifiers on firearm parts or ammunition.

Animation has had a global renaissance during the 1990s, and nowhere is this more evident than in Asia. With the exception of China and Japan, most Asian nations are relatively new to this art form. Over the last decade, countries such as Taiwan, South Korea, the Philippines, and Thailand, as well as China, have acted as major offshore production plants for North American and European studios. One of the spurs for this increase in activity has been the global growth of terrestrial, cable, satellite, and video systems, all demanding large menus of programming, including animation. A second spur has been the exceptional popularity that Japanese animé has enjoyed across Asia, Europe, and the United States. Despite these developments, there has not been corresponding growth of a serious literature covering industrial and aesthetic issues about Asian animation, and the small amount of work that has been produced has not been published in English. Animation in Asia and the Pacific provides the first continent-wide analysis, delving into issues of production, distribution, exhibition, aesthetics, and regulation in this burgeoning field. Animation in Asia and the Pacific also offers vignettes of the fascinating experiences of a group of

animation pioneers. The historical and contemporary perspectives derive from interviews, textual analysis, archival research, and participation/observation data.

The enormous genetic flexibility of bacteria jeopardizes the usefulness of currently available antibiotics, and requires new approaches to antibiotic discovery and development. Antimicrobial resistance can be acquired in a short time frame, both by genetic mutation and by direct transfer of resistance genes across genus and species boundaries. Understanding mechanisms of resistance is crucial to the future of antimicrobial therapy. Extensively revised, with contributions from international leaders in their fields, *Bacterial Resistance to Antimicrobials, Second Edition* blends scientific and practical approaches to the social, economic, and medical issues related to this growing problem. The book begins with a history of antimicrobial agents and bacterial resistance, and outlines the forces that contributed to the abuse of antibiotics and precipitated the current crisis. It goes on to describe what is known about the ecology of antibiotic resistant bacteria and reveals the inadequacies in our understanding. Emphasizing public health aspects, the editors stress that significant progress will be made only by addressing the problem only as a public, worldwide, problem. Chapters on resistance mechanisms describe the latest findings on what makes different groups of bacteria susceptible or resistant to antibiotics. They reveal the staggering diversity of bacteria and the need for a foundational understanding that will stimulate development of antibiotics capable of avoiding resistance mechanisms. Examining the success and limitations of complementary approaches, such as combining  $\beta$ -lactam antibiotics with  $\beta$ -lactamase inhibitors, the book brings together information on resistance mechanisms in different groups of bacteria to help future efforts to more effectively develop and deploy antimicrobial therapies.
