This is the first edition of this manual. It has been revised, expanded, and updated to meet the most recent demands for Peer Specialist training curricula

in the Department of Veterans Affairs (DVA). This manual is adapted from the 2007 National Association of Peer Specialists (NAPS) Training Manual, Third Edition, with permission from Steven Harrington, founder and CEO of NAPS. It has been developed through extensive input from peer support practitioners across the United States. The author of the original manual is also an experienced peer support specialist. The major modification in this DVA version has been to focus the content on the competencies expected of Peer Specialists and Peer Support Technicians in the DVA. The competencies were developed by a DVA workgroup that synthesized information from the training programs and testing instruments of six prominent peer support specialist

---

training and certification programs in the United States. This manual also contains DVA specific language and procedures.

Water/Wastewater

Equipment Maintenance,

Volumes 1 and 2 deals with

equipment maintenance as

individual components, not

as complete machines,

allowing more information

about the design,

application and

maintenance requirements

of machinery to be

presented. This work-

related inventory of

wastewater covers plant

components where

breakdowns most

frequently occur. The text

explains the design,

operation and maintenance

of equipment critical to

plant functioning; motors,

pumps, blowers, mixers

and more. The author

demonstrates how careful

---

attention to specific equipment parts and operation, especially through systematic maintenance, will lead to fewer breakdowns and more rapid repairs. These texts cover basic operating characteristics of machinery components, making them a valuable reference source as well as a training and maintenance manual. Written in easy-to-understand language, without complex formulas or technical theories, Hands-On Water/Wastewater Equipment Maintenance Volumes 1 and 2 provides you with basic information to help you acquire a general understanding of how components function and how to keep equipment operating properly. These two volumes belong in every water and wastewater treatment plant as a reference and manual for

equipment maintenance. The hands-on approach provides maintenance operators, crew leaders and supervisors with practical information about how the machinery they work with every day functions, and how to keep it running smoothly.
