Inventory Management in Multi-Echelon Networks presents methods to plan inventory in distribution networks. By holistically looking at the supply chain, it shows how safety stocks across all echelons can be optimized if inventory of all levels is taken into consideration. The gap between the existence of advanced inventory planning methods and their low penetration in the industry was the motivation for this book. Christopher Grob develops essential algorithms that companies can use for network inventory planning and highlights achievable implementation benefits. The work of the author was inspired by the needs of an after sales supply chain of a large automotive company. This company supplies customers all over the world with spare parts and operates a distribution network with more than 100 warehouses. This supply chain faces two particular challenges: demand is highly uncertain and customers expect a high service level. About the Author Christopher Grob works in after sales supply chain management at a major German automotive company. He is responsible for the functional development of inventory planning systems for the spare parts business. He is an expert in the field of inventory management.

Warehouses are often seen as a necessary evil: places that stop the flow of goods and thus increase costs without adding value. But the truth is that they have a critical part to play in supply chain management, and warehouse managers should be centrally involved in the strategic aspects of any business. Excellence in Warehouse Management covers everything you need to know to manage warehouse operations as part of a streamlined and holistic system, fine-tuned to serve the customer and

drive the bottom-line. With thinking points, self-assessment exercises and case studies Stuart Emmett challenges you to consider your own operations in a new way, and plot a course into the future.

Logistics, Shipping and Supply Chain Management is an emerging subject of importance in an emerging country like India and similar economies. Since India is at the cusp of being a developed nation and subjects like Logistics are still at the infancy stage, lot of Universities and Institutes in India have started including these subjects at the Bachelors, Masters and diploma levels of Business Administration, Management Science, Commerce and Export & Import related subjects and this book will have, I hope, tremendous interests among the practitioners, young students and the academia not only for the global community but Indian sub-continent and South East Asia specifically. Since now, after more than 30 years of professional life, I am a visiting faculty member of various Universities and Institutes, I felt that there is dearth of proper books in this field, and I felt it

as my humble duty to share whatever limited knowledge with the young students who were never exposed to subjects like Shipping, Logistics, Supply Chain Management, Commerce, Export Import Trade and their operational and legal aspects. If this book also assist the faculty members even in a limited way, then my humble efforts are fulfilled. Although there are lot of people worldwide who has guided and helped me during my career in India and abroad, to name them is a huge task. But I can't forget the help and guidance given to me during my professional life in Germany by Mr. Herbert Poetschke, Hapag Lloyd AG, Hamburg, Mr. Christian Conen, VLA-Vereinigte Linen Agenturen GmbH, Bremen and specially my well wishers in India Mr. K.C. Raman, former Director of Forbes Gokak, and Mr. Shantanu Bhatkamkar, Chairman of the ATC Logistics Group, Mumbai. But it was the persuasion from one of my cousins and a friend, Mr. Sam G. Nilamel of Nilamel Exports, an industrialist in Kerala and Kuwait, who always prompted me to write a book. Though in I have commenced this hilarious exercise of bringing out this comprehensive handbook on Logistics and Shipping couple of years back, it was a tremendous task to write, re-write, revise and edit this volume. After the main script is finalized, it is my daughter Aatira Benn John who helped me in formatting and designing this book in its present form and I am thankful to her. Accounting and Finance Policies and Procedures John Wiley & Sons

Challenges faced by supply chains appear to be growing exponentially under the demands of increasingly complex business environments confronting the decision makers. The world we live in now operates under interconnected economies that put extra pressure on supply chains to fulfil ever-demanding customer preferences.

Relative attractiveness of manufacturing as well as consumption locations changes very rapidly, which in consequence alters the economies of large scale production. Coupled with the recent economic swings, supply chains in every country are obliged to survive with substantially squeezed margins. In this book, we tried to compile a selection of papers focusing on a wide range of problems in the supply chain domain. Each chapter offers important insights into understanding these problems as well as approaches to attaining effective solutions.

Inventories are prevalent everywhere in the commercial world, whether it be in retail stores, manufacturing facilities, government stockpile material, Federal Reserve banks, or even your own household. This textbook examines basic mathematical techniques used to sufficiently manage inventories by using various computational methods and mathematical models. The text is presented in a way such that each section can be read independently, and so the order in which the reader approaches the book can be inconsequential. It contains both deterministic and stochastic models along with algorithms that can be employed to find solutions to a variety of inventory control problems. With exercises at the end of each chapter and a clear, systematic exposition, this textbook will appeal to advanced undergraduate and first-year graduate students in operations research, industrial engineering, and quantitative MBA programs. It also serves

as a reference for professionals in both industry and government worlds. The prerequisite courses include introductory optimization methods, probability theory (non-measure theoretic), and stochastic processes.
