Registries for Evaluating Patient Outcomes Lippincott Williams & Wilkins

2017-2018 update. This little booklet has been fully revised this year. Two overlapped sections ("Additional things for admission order" and "floor orders") are finally combined. Some redundant sections are removed based on the feedback we received. More management sections (such as managing acute alcohol intoxication, sepsis, renal failure, etc) are added. New section on "Introduction to Cardiology Procedures" is added. All the sections are edited and at least one-third of the book has changed. The sole purpose of this booklet is to help new interns in the beginning of the year. It is mostly focused on inpatient medicine and ICU rotations - how to handle the most

common floor calls, such as chest pain, uncontrolled HTN, vomiting and to help guide running RRT/ Code Blue. With advances in technology such as widespread use of electronic medical records, this booklet has been electronically formatted to meet the demands of dynamic medical system. We hope this booklet will make your intern year less stressful, so that you can focus on learning, the decision making process, and ultimately, better patient care.

The Washington Manual Obstetrics and Gynecology Survival Guide Academic Press

This User's Guide is intended to support the design, implementation, analysis, interpretation, and quality evaluation of registries created to increase understanding of patient outcomes. For the purposes of this guide, a patient registry is an organized system that uses observational study methods to collect uniform data (clinical and other) to evaluate specified outcomes for a population defined by a particular disease, condition, or exposure, and that serves one or more predetermined scientific, clinical, or policy purposes. A registry database is a file (or files) derived from the registry. Although registries can serve many purposes, this guide focuses on registries created for one or more of the following purposes: to describe the natural history of disease, to determine clinical effectiveness or cost-effectiveness of health care products and services, to measure or monitor safety and harm, and/or to measure quality of care. Registries are classified according to how their populations are defined. For example, product registries include patients who have been exposed to biopharmaceutical products or medical devices. Health services registries consist of patients who have had a common procedure, clinical encounter, or hospitalization. Disease or condition registries are defined by patients having the same diagnosis, such as cystic fibrosis or heart failure. The User's Guide was created by researchers affiliated with AHRQ's Effective Health Care Program, particularly those who participated in AHRQ's DEClDE (Developing Evidence to Inform Decisions About Effectiveness) program. Chapters were subject to multiple internal and external independent reviews.
