From the author of the New York Times bestseller *The Inevitable*—a sweeping vision of technology as a living force that can expand our individual potential In this provocative book, one of today's most respected thinkers turns the conversation about technology on its head by viewing technology as a natural system, an extension of biological evolution. By mapping the behavior of life, we paradoxically get a glimpse at where technology is headed-or "what it wants." Kevin Kelly offers a dozen trajectories in the coming decades for this near-living system. And as we align ourselves with technology's agenda, we can capture its colossal potential. This visionary and optimistic book explores how technology gives our lives greater meaning and is a must-read for anyone curious about the future.

Before the Internet became widely known as a global tool for terrorists, one perceptive U.S. citizen recognized its ominous potential. Armed with clear evidence of computer espionage, he began a highly personal quest to expose a hidden network of spies that threatened national security. But would the authorities back him up? Cliff Stoll's dramatic firsthand account is "a computer-age detective story, instantly fascinating [and] astonishingly gripping" (Smithsonian). Cliff Stoll was an astronomer turned systems manager at Lawrence Berkeley Lab when a 75-cent accounting error alerted him to the presence of an unauthorized user on his system. The hacker's code name was "Hunter"—a mysterious invader who managed to break into U.S. computer systems and steal sensitive military and security information. Stoll began a one-man hunt of his own: spying on the spy. It was a dangerous game of deception, broken codes, satellites, and missile bases—a one-man sting operation that finally gained the attention of the CIA . . . and ultimately trapped an international spy ring fueled by cash, cocaine, and the KGB.

Jeff Speck has dedicated his career to determining what makes cities thrive. And he has boiled it down to one key factor: walkability. The very idea of a modern metropolis evokes visions of bustling sidewalks, vital mass transit, and a vibrant, pedestrian-friendly urban core. But in the typical American city, the car is still king, and downtown is a place that's easy to drive to but often not worth arriving at. Making walkability happen is relatively easy and cheap; seeing exactly what needs to be done is the trick. In this essential new book, Speck reveals the invisible workings of the city, how simple decisions have cascading effects, and how we can all make the right choices for our communities. Bursting with sharp observations and real-world examples, giving key insight into what urban planners actually do and how places can and do change, *Walkable City* lays out a practical, necessary, and eminently achievable vision of how to make our normal American cities great again.

Go from wired and tired to lean and thriving with *The Adrenal Reset Diet* Why are people gaining weight faster than ever before? The idea that people simply eat too much is no longer supported by science. The emerging idea is that weight gain is a survival response: Our bodies are under attack from all directions—an overabundance of processed food, a polluted world, and the pressures of daily life all take their toll. These attacks hit a very important set of glands, the adrenals, particularly hard. The adrenal glands maintain a normal cortisol rhythm (cortisol is a hormone associated with both stress and fat storage). When this rhythm is off, we can become overwhelmed more quickly, fatigued, gain weight, and eventually, develop even more severe health issues such as heart disease or diabetes. In *The Adrenal Reset Diet*, Dr. Alan Christianson provides a pioneering plan for optimal function of these small but powerful organs. His patient-tested weight-loss program is the culmination of decades of clinical experience and over 75,000 patient-care visits. In a study at his clinic, participants on the Adrenal Reset Diet reset their cortisol levels by over 50% while losing an average of over 2 inches off their waists and 9 pounds of weight in 30 days. What can you expect? • Learn whether your adrenals are Stressed, Wired and Tired, or Crashed and which adrenal tonics, exercises, and foods are best for you • The clinically proven shakes, juices, and other delicious recipes, to use for your Reset • New ways to turn off the triggers of weight gain with carbohydrate cycling, circadian repair, and simple breathing exercises • An easy 7-day ARD eating plan to move your and your adrenals from Surviving to Thriving
