The water cycle is a process in which water switches its state between the three different phases, namely solid, liquid and gas. And then further the water cycle includes circulation between the earth's surface, water bodies and the atmosphere. The basic driving force of the water is the sun (Hughes 12-19). The water cycle is of immense ...

Water Cycle is an international and interdisciplinary open access journal that publishes top-tier original research in all areas of water cycles, including meta-cycles. It examines their relationship to science, technology, society, economics, health, culture, policy, regulation and strategy.

The Process of the Water Cycle Research Paper

Occurrence, fate, removal and assessment of emerging contaminants in water in the water cycle (from wastewater to drinking water) Edited by Thomas Ternes, Adriano Joss, Jörg Oehlmann Last update 1 April 2015

"Water Cycle Essay" Essays and Research Papers

...The water cycle is also known as the hydrologic cycle. The water cycle describes the

movement of water on, above and below the surface of Earth. Water can change states through the stages of the water cycle. Water can change from a solid to a liquid to water vapor in various places of the water cycle. Water moves from one lake to another, just like from an ocean to the atmosphere.

Water Cycle Research Paper

The earth has a limited amount of water. That water keeps going around and around and around in what we call the "Water cycle". It is the only way that Earth can be continually supplied with fresh water. The sun is the most important part of renewing our water supply. It can be solid ... (PDF) Hydrologic cycle - Find and share research

Water plays a crucial role in Earth's climate, functioning of ecosystems and environment. Many studies on the global water cycle deal with only specific aspects (see the review by Trenberth et al. 2007a, and other chapters in this monograph). Reliable data on the surface water budget are often available only over certain regions.
