This report
presents the
results of a study
of the problem of
water supply and
waste disposal
in the three-
State, six-county
region in which
the Tocks Island
Reservoir and
the Delaware
Water Gap
National
Recreation Area
are being
developed. Peak
summer
populations are
projected over a
50-year period
and utilities

systems
alternatives
which could
accommodate
such projected
growth are
presented in the
report. Water
supplies in the
region are seen
as adequate to
meet future
demands, with
heavy emphasis
on development
of groundwater
resources. Five
alternative
sewerage plans,
ranging in
degree of
regionalization
from 116 local
treatment
systems to a
single system for
the entire region,
are outlined

including detailed
cost estimates.
Preservation of
water quality in
the region is a
primary objective
of the study.
