This volume puts forth an original theoretical framework, the ludonarrative model, for studying video games which foregrounds the empirical study of the player experience. The book provides a comprehensive introduction to and description of the model, which draws on theoretical frameworks from multimodal discourse analysis, game studies, and social semiotics, and its development out of participant observation and qualitative interviews from the empirical study of a group of players. The volume then applies this approach to shed light on how players' experiences in a game influence how they understand and make use of game components in order to progress its narrative. The book concludes with a frame by frame analysis of a popular game to demonstrate the model's principles in action and its subsequent broader applicability to analyzing video game interaction and design. Offering a new way forward for video game research, this volume is key reading for students and scholars in multimodality, discourse analysis, game studies, interactive storytelling, and new media.

This book describes the anatomy and biomechanics of each area of the spine, pelvis and TMJ, and the theories behind the subjective and objective exams. Working from this foundation, detailed explanations on the assessment and treatment of each of the various areas are given, enabling the student and clinician to differentially diagnose, and integrate the results gleaned from the assessment, in order to formulate a working hypothesis. The sequential flow of the assessment is also detailed, with explanations as to its rationale, allowing a clinician of any proficiency level to use this book as a resource for an accurate biomechanical assessment, and the design of a specific treatment plan, based on those assessment findings. Recognizing the varying abilities between clinicians, most techniques are described with the patient sitting or lying in different positions.
