Processes by which rock, sand, and soil are broken down and carried away (i.e. weathering, glaciation) mechanical weathering. the breakdown of rock into smaller pieces by physical means. chemical weathering. Weathering, Erosion & Soil - Videos & Lessons | Study.com
The process of weathering alters rocks at the earth's surface and breaks them down over time into fine grained particles of sediment and soil. Weathering is the result of the interactions of air, water, and temperature on exposed rock surfaces and prepares the rock for erosion. Erosion is the movement of the particles by ice, wind, or water.

Weathering and erosion constantly change the rocky ...
Weathering is the breaking down of rocks into smaller pieces. Erosion is what causes the smaller pieces to be moved. Finally, deposition drops or deposits these pieces into a new place.
Chapter 7: Weathering, Erosion and Soil | StudyHippo.com
Weathering and erosion constantly change the rocky landscape of Earth. Weathering wears away exposed surfaces over time. The length of exposure often contributes to how vulnerable a rock is to weathering. Rocks, such as lavas, that are quickly buried beneath other rocks are less vulnerable to weathering and erosion than rocks that are exposed to agents such as wind and water.
Weathering, Erosion, & Soil Test Study Guide Flashcards ...
Weathering and erosion are continuous processes that gradually change the natural environment over time. Weathering is the process of wearing down materials into sediment. Erosion occurs when this sediment is moved.
