Most churches have sought out a new pastor many times, yet search committees often feel as though they are inventing the process from scratch. In *The Pastoral Search Journey*, John Vonhof provides detailed guidance for search committees to ensure a good match between pastor and congregation. This is Vonhof's third book about the pastoral search -- but the first to discuss interim pastors, transitions between pastors, and the use of the Internet and digital media. Vonhof advises congregational leaders on establishing the search committee; ensuring the congregation is cared for during the pastoral vacancy; conducting the congregational self-study and creating an information packet; finding, communicating with, and interviewing candidates; determining selection criteria as well as evaluating and recommending candidates; managing call negotiations; and finally welcoming the congregation's new pastor. Sample letters, forms, and other tools are provided.

Personality and Intelligence at Work IOS Press
Personality and Intelligence at Work examines the increasingly controversial role of individual differences in predicting and determining behaviour at work. It combines approaches from organizational psychology and personality theory to critically examine the physical, psychological and psychoanalytic aspects of individual differences, and how they impact on the world of work. Topics covered include the role of IQ at work as the best predictor of success, but also the importance of increasingly recognized social intelligences such as emotional intelligence (EQ). The significance of personality traits and the impact of temperaments on work performance are also examined, and the methods used to assess work behaviour and potential are reviewed. Psychological tests, which measure personality traits, are questioned as accurate predictors of behaviour at work, alongside other factors such as job satisfaction, productivity, absenteeism and turnover. This thoroughly revised and updated edition of *Personality at Work* provides a comprehensive review of the relevant literature from psychology, sociology and management science. It will be of interest to students of organizational psychology and business and management studies, as well as HR professionals.

Seminar paper from the year 2018 in the subject Business economics - Personnel and Organisation, grade: 1,0, Technical University of Munich (Chair of Corporate Management), language: English, abstract: New forms of applications are emerging with the introduction of image-based communication in the application process. The trend of application videos has the potential to reduce costs and risks for organizations among other considerable opportunities, but this application type has not been popularly implemented by organizations in their recruiting processes yet. However, there is practically no scientific research on the use of these videos and whether (and to what degree) applicants accept this application trend. For this term paper, applicants' aversion to application videos and potentially related constructs are empirically examined via an online survey with a sample of students from all over Germany. Results show relatively high aversion to application videos among the participants but there are differences depending on the students' fields of study. Correlation analysis reveals a weak negative correlation between video technology acceptance and aversion to application videos. Furthermore, aversion to application videos is positively correlated with participants' risk aversion whereas no significant correlation with job application experience was found. This term paper emphasizes that applicants' aversion to application videos is substantial and should therefore be carefully considered in the adoption of this trend. It represents continuation of research on e-selection solutions and builds a sound starting point for future research on application videos.
