This book is for programmers, scientists, and engineers who have knowledge of the Python language and know the basics of data science. It is for those who wish to learn different data analysis methods using Python and its libraries. This book contains all the basic ingredients you need to become an expert data analyst.

Counting-Out Rhymes Course Technology Offers state-of-the-art principles and strategies gleaned from high-profile projects to help readers manage design This guide to managing design process within the commercial design and construction industry addresses a growing pain point in an industry where collaborative approaches to project delivery are outpacing the way professionals work. It synthesizes issues by investigating the “ why, ” “ how, ” and “ who ” of the discipline of managing design, and gives the “ what ” and “ when ” to apply the solutions given various project delivery and contracting methods. The book features candid interviews with over 40 industry leaders—architects, engineers, contractors, owners, educators, technology evangelists, and authors—which present a broad

look at current issues and offer paths to future collaboration and change. Managing Design: Conversations, Project Controls and Best Practices for Commercial Design and Construction Projects is a self-help book for design and construction that provides an insider ’ s look at the mysteries of managing design for yourself, team, firm and future. It tackles client empathy; firm culture; owner leadership; design and budgets; dealing with engineers, consultants, and contractors; contracts; team assembly; and much more. Features eye-opening interviews with 40 industry luminaries Exposes issues and poses solutions to longstanding industry ills Offers a project design controls framework and toolset for immediate application and action Includes best practice tips, process diagrams, and comparative analytical tables to support the text Written in a relatable style, Managing Design: Conversations, Project Controls and Best Practices for Commercial Design and Construction Projects is a welcome resource for owners, contractors, and designers in search of better ways to work together. “ Managing Design blends practical advice from the author's five decades in architecture and construction with wisdom from more than three dozen luminaries in the design, delivery, ownership and operation of the built environment. The result is an extraordinary guide to integrating practice across disciplines. ” —Bob Fisher, Editor-In-Chief, Design Intelligence “ Managing Design peers into the soul of a contentious industry as it grapples with change—a deep dive into the design and construction process in the words of those doing the work. I enjoyed the engineers and contractors ’ pleas to be made parties to design process early on. The questions—as interesting as the answers—are both

here in this book.” —Richard Korman, Deputy Editor, Engineering News Record “ Managing Design hits many of the design and construction industry ’ s ills head-on with insightful interviews by new and established leaders and real-world tactics on creating better teams, better communications between players, and—most vitally—better project results.” —Rebecca W. E. Edmunds, AIA, Editor, Author and President, r4 llc

This Festschrift is published in honor of Rodney G. Downey, eminent logician and computer scientist, surfer and Scottish country dancer, on the occasion of his 60th birthday. The Festschrift contains papers and laudations that showcase the broad and important scientific, leadership and mentoring contributions made by Rod during his distinguished career. The volume contains 42 papers presenting original unpublished research, or expository and survey results in Turing degrees, computably enumerable sets, computable algebra, computable model theory, algorithmic randomness, reverse mathematics, and parameterized complexity, all areas in which Rod Downey has had significant interests and influence. The volume contains several surveys that make the various areas accessible to non-specialists while also including some proofs that illustrate the flavor of the fields.

You can build a world-class SOA infrastructure entirely using popular, and mature, open-source applications. Unfortunately, the technical

documentation for most open-source projects focuses on a specific product, the big SOA picture. You're left to your own devices to figure out how to cobble together a full solution from the various bits. In other words, unless you already know how Mule and Tuscany work with jBPM, you're stuck. Open Source SOA shows readers how to build an entire SOA application using open-source technologies. It shows readers how to apply key ideas like Enterprise Service Bus (ESB) design and Business Process Management (BPM) and learn the tools and techniques to implement them effectively. To pull everything together, the author describes real-life case studies from his own work to tie together all the principles and practices. These hard-to-find case studies are pure gold for the reader, as most developers keep these trade secrets to themselves. Purchase of the print book comes with an offer of a free PDF, ePub, and Kindle eBook from Manning. Also available is all code from the book.

This book highlights recent research on bio-inspired computing and its various innovative applications in information and communication technologies. It presents 51 high-quality papers from the 11th International Conference on Innovations in Bio-Inspired Computing and Applications (IBICA 2020) and 10th World Congress on Information and Communication Technologies (WICT 2020), which was held online during December 16 – 18, 2019. As a premier conference, IBICA – WICT brings together researchers, engineers and practitioners whose work involves bio-inspired computing, computational intelligence and their applications in information security, real-world contexts, etc. Including contributions by authors from 25

countries, the book offers a valuable reference guide for all researchers, students and practitioners in the fields of Computer Science and Engineering.

We revisit Lipset 's law, which posits a positive and significant relationship between income and democracy. Using dynamic and heterogeneous panel data estimation techniques, we find a significant and negative relationship between income and democracy: higher/lower incomes per capita hinder/trigger democratization. Decomposing overall income per capita into its resource and non-resource components, we find that the coefficient on the latter is positive and significant while that on the former is significant but negative, indicating that the role of resource income is central to the result.

The need for light-weight materials, especially in the automobile industry, created renewed interest in innovative applications of magnesium materials. This demand has resulted in increased research and development activity in companies and research institutes in order to achieve an improved property profile and better choice of alloy systems. Here, development trends and application potential in different fields like the automotive industry and communication technology are discussed in an interdisciplinary framework.

The worldwide drought continues. A new US Constitution has been adopted with most federal power transferred to seven super-states. The old interstate agreements, including those for commercial traffic, electrical power and water sharing, are voided. Citizens in the Republic of California are dying for lack of water. Diplomacy fails. Sacramento must do something, anything, to secure water. The Republican Guards are ordered into Oregon to seize and divert water. Political leaders in the Pacific Northwest demand and immediate and unconditional withdrawal. While politicians in Sacramento seek delay through negotiation, the military in Spokane plans for war. Will California's secure needed water before the Pacific Northwest builds and delivers the ultimate retaliation? Will one side blink? And, will they blink quickly enough?

Magnesium and magnesium alloys offer a wealth of valuable properties, making them of great interest for use across a wide range of fields. This has led to extensive research focused on understanding the properties of magnesium and how these can be controlled during processing. Fundamentals of magnesium alloy metallurgy presents an authoritative overview of all aspects of magnesium alloy metallurgy, including physical metallurgy, deformation, corrosion and applications. Beginning with an introduction to the primary production of magnesium, the book goes on to discuss physical metallurgy of

magnesium and thermodynamic properties of magnesium alloys. Further chapters focus on understanding precipitation processes of magnesium alloys, alloying behaviour of magnesium, and alloy design. The formation, corrosion and surface finishing of magnesium and its alloys are reviewed, before Fundamentals of magnesium alloy metallurgy concludes by exploring applications across a range of fields. Aerospace, automotive and other structural applications of magnesium are considered, followed by magnesium-based metal matrix composites and the use of magnesium in medical applications. With its distinguished editors and international team of expert contributors, Fundamentals of magnesium alloy metallurgy is a comprehensive tool for all those involved in the production and application of magnesium and its alloys, including manufacturers, welders, heat-treatment and coating companies, engineers, metallurgists, researchers, designers and scientists working with these important materials. Overviews all aspects of magnesium alloy metallurgy Discusses physical metallurgy of magnesium and thermodynamic properties of magnesium alloys Reviews the formation, corrosion and surface finishing of magnesium and its alloys Computability and Complexity Go *-1 Eeny, meeny, figgledy, fig. (no. 577) Counting-out rhymes are used by children between the ages of six and eleven as a special way of choosing it and beginning play. They may be short and simple ("O-U-

T spells out/And out goes you") or relatively long and complicated; they may be composed of ordinary words, arrant nonsense, or a mixture of the two. Roger D. Abrahams and Lois Rankin have gathered together a definitive compendium of counting-out rhymes in English reported to 1980. These they discovered in over two hundred sources from the nineteenth and twentieth centuries, including rhymes from England, Scotland, Ireland, Australia, New Zealand, and the United States. Representative texts are given for 582 separate rhymes, with a comprehensive listing of sources and variants for each one, as well as information on each rhyme's provenience, date, and use. Cross-references are provided for variants whose first lines differ from those of the representative texts. Abrahams's introduction discusses the significance of counting-out rhymes in children's play. Children's folklore and speech play have attracted increasing attention in recent years. Counting-Out Rhymes will be a valuable resource for researchers in this field.

Gareth Morgan's monumental book, Images of Organization, revolutionized the field of organization theory. In honor of Morgan's classic text, this edited volume, Exploring Morgan's Metaphors: Theory, Research, and Practice in Organizational Studies (by Anders Örténblad, Kiran Trehan, and Linda L. Putnam), illustrates how Morgan's eight metaphors inform research, practice, and organizational intervention in a variety of contexts. Including contributions from well-known experts in their fields, specifically, Joep Cornelisen, Cliff Oswick, David Grant, and Gareth Morgan, this new text offers fresh perspectives and sets forth new metaphors for conceptualizing organizations in today's workforce. Readers will gain insights and guidelines into the different ways that Morgan's metaphors and metaphorical thinking can be used to better understand organizational life, as well as how to study and develop organizations.

This book is a part of the Proceedings of the Seventh International Symposium on Neural Networks (ISNN 2010), held on June 6-9, 2010 in Shanghai, China. Over the past few years, ISNN has matured into a well-

established premier international symposium on neural networks and related fields, with a successful sequence of ISNN series in Dalian (2004), Chongqing (2005), Chengdu (2006), Nanjing (2007), Beijing (2008), and Wuhan (2009). Following the tradition of ISNN series, ISNN 2010 provided a high-level international forum for scientists, engineers, and educators to present the state-of-the-art research in neural networks and related fields, and also discuss the major opportunities and challenges of future neural network research. Over the past decades, the neural network community has witnessed significant breakthroughs and developments from all aspects of neural network research, including theoretical foundations, architectures, and network organizations, modeling and simulation, empirical studies, as well as a wide range of applications across different domains. The recent developments of science and technology, including neuroscience, computer science, cognitive science, nano-technologies and engineering design, among others, has provided significant new understandings and technological solutions to move the neural network research toward the development of complex, large scale, and networked brain-like intelligent systems. This long-term goals can only be achieved with the continuous efforts from the community to seriously investigate various issues on neural networks and related topics.
