Corpus linguistics has now come of age and Corpus Approaches to Discourse equips students with the means to question, defend and refine the methodology. Looking at corpus linguistics in discourse research from a critical perspective, this volume is a call for greater reflexivity in the field. The chapters, each written by leading authorities, contain an overview of an emerging area and a case-study, presenting practical advice alongside

theoretical reflection. Carefully structured with an introduction by the editors and a conclusion by leading researcher, Paul Baker, this is key reading for advanced students and researchers of corpus linguistics and discourse analysis.

We revisit Lipset ' s law, which posits a positive and significant relationship between income and democracy. Using dynamic and heterogeneous panel data estimation techniques, we find a significant and negative relationship between income and democracy: higher/lower incomes per capita hinder/trigger democratization. Decomposing overall income per capita into its resource and non-resource components, we find that the coefficient on the latter is positive and significant while that on the former is significant but negative, indicating that the role of resource income is central to the result.

This book is a part of the Proceedings of the Seventh International Symposium on Neural Networks (ISNN 2010), held on June 6-9, 2010 in Shanghai, China. Over the past few years, ISNN has matured into a well-established premier international symposium on neural networks and related fields, with a successful sequence of ISNN series in Dalian (2004), Chongqing (2005), Chengdu (2006), Nanjing (2007), Beijing (2008), and Wuhan (2009). Following the tradition of ISNN series, ISNN 2010 provided a high-level international forum for

scientists, engineers, and educators to present the state-of-the-art research in neural networks and related fields, and also discuss the major opportunities and challenges of future neural network research. Over the past decades, the neural network community has witnessed significant breakthroughs and developments from all aspects of neural network research, including theoretical foundations, architectures, and network organizations, modeling and simulation, empirical studies, as well as a wide range of applications across different domains. The recent developments of science and technology, including neuroscience, computer science, cognitive science, nano-technologies and engineering design, among others, has provided significant new understandings and technological solutions to move the neural network research toward the development of complex, large scale, and networked brain-like

intelligent systems. This long-term goals can only be achieved with the continuous efforts from the community to seriously investigate various issues on neural networks and related topics.

Find out for yourself! Islam is not the enemy; Are you surprised to know that Islam's God is like yours? Islams's holy book the Qur'an, in verse (2:62) says:

"Believers, Jews, Christians and Sabeans - whoever believes in God and the Last Day and does what is right - shall be rewarded by their Lord; they have nothing to fear or to regret." Islam preaches universalism, racial equality and social justice. The founding fathers' vision of democracy was transformed into a one-dollar, one-vote democracy. One-half of one percent of American households owns more than 90 percent of Americans. In such a democracy, Wall street owns all the money and all the votes. The American dream was hijacked in the 19th century by the few, as president Lincoln feared. It was hijacked by Wall Street and corporations, just as president Rutherford B. Hays said: "This is a government of corporations for corporations by corporations". Wall Street and capitalism have elevated materialism and economic growth to the rank of a new religion of the land. Money became the ultimate measure of success. In Wall Street Capitalism, citizens are incidental numbers on balance sheets. Materialism became "a

tumor in the soul".

Contemporary corpus linguists use a wide variety of methods to study discourse patterns. This volume provides a systematic comparison of various methodological approaches in corpus linguistics through a series of parallel empirical studies that use a single corpus dataset to answer the same overarching research question. Ten contributing experts each use a different method to address the same broadly framed research question: In what ways does language use in online Q+A forum responses differ across four world English varieties (India, Philippines, United Kingdom, and United States)? Contributions will be based on analysis of the same 400,000 word corpus from online Q+A forums, and contributors employ methodologies including corpus-based discourse analysis, audience perceptions, Multi-Dimensional analysis, pragmatic analysis, and keyword analysis. In their introductory and concluding chapters, the

volume editors compare and contrast the findings from each method and assess the degree to which 'triangulating' multiple approaches may provide a more nuanced understanding of a research question, with the aim of identifying a set of complementary approaches which could arguably take into account analytical blind spots. Baker and Egbert also consider the importance of issues such as researcher subjectivity, type of annotation, the limitations and affordances of different corpus tools, the relative strengths of qualitative and quantitative approaches, and the value of considering data or information beyond the corpus. Rather than attempting to find the 'best' approach, the focus of the volume is on how different corpus linguistic methodologies may complement one another, and raises suggestions for further methodological studies which use triangulation to enrich corpus-related research.

The worldwide drought continues. A new US Constitution has been adopted with most federal power transferred to seven super-states. The old interstate agreements, including those for commercial traffic, electrical power and water sharing, are voided. Citizens in the Republic of California are dying for lack of water. Diplomacy fails. Sacramento must do something, anything, to secure water. The Republican Guards are ordered into Oregon to seize and divert water. Political leaders in the Pacific Northwest demand and immediate and unconditional withdrawal. While politicians in Sacramento seek delay through negotiation, the military in Spokane plans for war. Will California's secure needed water before the Pacific Northwest builds and delivers the ultimate retaliation? Will one side blink? And, will they blink quickly enough?
