Web. The idea has been for many years that images should be saved with a resolution of 72 PPI. . But the common misconception is that this resolution or PPI value is the deciding factor of image quality for web images, where it is actually about pixel dimensions (http://medialoot.com/blog/high-resolution-web/).

Web Resolution Dpi

As screens and printers have improved, the 72 DPI rule for web resolution is now completely irrelevant. Literally no one uses 72 ppi resolution monitors anymore. Monitors these days, especially Apple's retina displays, have much greater resolutions, commonly 227 DPI. Some smartphones even display at up to 500 dpi.

Window.devicePixelRatio - Web APIs | MDN

Dpi stands for 'dots-per-inch' and is used in printing to describe the number of dots laid down on paper per square inch – in an image with a resolution of 10dpi, each square inch will be made up for ten smaller squares called pixels.

How to Check the DPI of an Image - Tech Junkie

DPI is used to describe the resolution number of dots per inch in a digital print and the printing resolution of a hard copy print dot gain, which is the increase in the size of the halftone dots during printing. This is caused by the spreading of ink on the surface of the media.

Dots per inch - Wikipedia

If you've been around computers and digital images for a while, especially if you're a web designer or a photographer publishing your photos online, you've no doubt heard it said that the correct resolution for images displayed on the web, or on computer screens in general, is 72 pixels per inch (ppi). You may have even heard it said that while 72 ppi is correct for images displayed on a Mac, a Windows-based PC needs the resolution set to 96 ppi.

Understanding DPI, Resolution and Print vs. Web Images

Image Resolution for Web Design | Shutterstock Blog
There's no standard resolution for web design that is best for all cases since websites need to consider how their audience is using the site and what their design concept is. But to give you a quick answer, the most common design file resolution used by the digital agencies that we work with is 1440px wide, with the main content container that is 1140px.
PPI vs. DPI: what's the difference? - Logos, Web, Graphic ...
Website 1: 300 DPI. Print - 72 DPI < 300 DPI. URL: http://www.vsel lis.com/understanding-dpi-resolution-and-print-vs-web-images/ "Print: 300dpi is standard, sometimes 150 is acceptable but never lower, you may go higher for some situations." With examples of 300dpi and 72dpi. Website 2: 72 DPI. Web - 72 DPI = 300 DPI. Print - 72 DPI > 300 DPI

The DPI (dots per inch) of an image is simply metadata embedded inside the image (header). The actual quality (resolution) of the image (within the file itself) is not affected when its DPI value is adjusted. The DPI value is read by some devices (such as printers) to determine how your image should be presented on a medium (such as paper).
