Virtualizing and Tuning Large-Scale Java Platforms Technical best practices and real-world tips for optimizing enterprise Java applications on VMware vSphere® Enterprises no longer ask, "Can Java be virtualized"? Today, they ask, "Just how large can we scale virtualized Java application platforms, and just how efficiently can we tune them?" Now, the

leading expert on Java virtualization answers these questions, offering detailed technical information you can apply in any production or QA/test environment. Emad Benjamin has spent nine years virtualizing VMware's own enterprise Java applications and working with nearly 300 leading VMware customers on projects of all types and sizes—from 100 JVMs to 10,000+, with heaps from 1GB to 360GB, and including massive big-data applications built on clustered JVMs. Reflecting all this experience, he shows you how to successfully size and tune any Java workload. This reference and performance "cookbook" identifies high-value optimization opportunities that apply to physical environments, virtual environments, or both. You learn how to rationalize and scale existing Java infrastructure, modernize architecture for new applications, and systematically benchmark and improve every aspect of virtualized Java performance. Throughout, Benjamin offers real performance studies, specific advice, and "from-the-trenches" insights into monitoring and troubleshooting. Coverage includes --Performance issues associated with large-scale Java platforms, including consolidation, elasticity, and flexibility --Technical considerations arising from theoretical and practical limits of Java platforms --Building

horizontal in-memory databases with VMware vFabric SQLFire to improve scalability and response times --Tuning large-scale Java using throughput/parallel GC and Concurrent Mark and Sweep (CMS) techniques --Designing and sizing a new virtualized Java environment --Designing and sizing new large-scale Java platforms when migrating from physical to virtualized deployments --Designing and sizing large-scale Java platforms for latency-sensitive in-memory databases --Real-world performance studies: SQLFire vs. RDBMS, Spring-based Java web apps, vFabric SpringTrader, application tiers, data tiers, and more --Performance differences between ESXi3, 4.1, and 5 --Best-practice considerations for each type of workload: architecture, performance, design, sizing, and high availability --Identifying bottlenecks in the load balancer, web server, Java application server, or DB Server tiers --Advanced vSphere Java performance troubleshooting with esxtop --Performance FAQs: answers to specific questions enterprise customers have asked *Office User Guide for MicroStrategy Analytics Enterprise* Vibrant Publishers There has never been a Web Services Description Language Guide like this. **SNMP 211 Success Secrets - 211 Most Asked Questions on SNMP - What You Need to Know** BEA WebLogic Server Interview Questions You'll Most Likely Be Asked

This book will provide you with the skills you need to efficiently create routes using Apache Camel. After briefly introducing the key features and core concepts of Camel, the book will take you through all the important features and components, starting with routing and processors. You will learn how to use beans in Camel routes, covering everything from supported registries and annotations, to the creation of an OSGi bundle and writing route definitions with Blueprint DSL. Leverage the Enterprise Integration Patterns (EIPs) supported by Camel and implement them in your routes. You will then see how components and endpoints handle exchanges

in Camel, and how you can use them to create a complete and powerful mediation framework. You will finally learn how to tackle errors and perform testing to ensure that your integration projects are working successfully.

*Oracle JDeveloper 11g Handbook* Prentice Hall Professional

BEA WebLogic Workshop is a rapid

application development tool that makes building Java-based Web service applications simple. With just a basic foundation of Java programming, you can use WebLogic Workshop to develop Web services. BEA WebLogic Workshop Kick Start provides everything you need to get started with WebLogic Workshop, including a quick Java primer and appendixes covering the essentials of XML, SOAP and WSDL. Learn the features of WebLogic Workshop and review hundreds of code examples, and explore the inner workings of this new tool. The book's CD-ROM contains all the source code and examples from the book, plus a 90-day trial version of BEA WebLogic Platform, which includes WebLogic Workshop. Foreword Web services have attracted much attention recently as the next "big thing" in computing technology. Vendors of all shapes and sizes have announced their support for Web services technologies, and every month a new Web services conference is popping up somewhere on the globe. With all this hype and attention, sometimes it's difficult to really discover what Web services are, where they fit in

your company, what the business case is, and how you can actually get started taking advantage of this technology. BEA has been working with customers to answer many of these questions, and provide solutions that enable companies to easily construct Web services that meet their needs today. Contrary to the common conception of Web services as a consumer-focused technology, Web services may have the greatest potential as a technology inside enterprises as a new way of tying disparate applications together using standards-based technologies. To make Web services really work in the enterprise, however, it's essential that they meet core enterprise requirements: Web services applications have to exist in a constantly changing IT environment where different applications are built and modified by different people on different schedules. They must accommodate everything from modern J2EE-based applications, to legacy systems, to applications at business partners. They must be able to handle rich and complex information and transmit it between internal and external applications. They must easily interact with other applications to leverage

---

existing investments. They must be robust, reliable, and they must perform. Perhaps most important of all, they have to be easy to build. For Web services to flourish within an organization, all developers will need to be able to build Web services that meet these requirements. BEA WebLogic Workshop Kick Start introduces you to BEA's new WebLogic Workshop product, a development tool and runtime framework that makes it easy to build powerful Web services that take advantage of the robust, enterprise features of the WebLogic J2EE application server. WebLogic Workshop provides a graphical tool that makes it easy to visualize, develop, and test Web service applications and visual controls that dramatically simplify access to existing resources like databases, packaged applications, Enterprise Java Beans, and other Web services. The Workshop framework provides out-of-the-box support for building Web services that are loosely coupled so that the internal implementation details of an application can be cleanly separated from the "public contract" that a Web service offers to other applications. This makes Workshop Web services

flexible in the face of a constantly changing IT environment. Workshop also provides built-in support for asynchronous messaging so that Web service applications can carry on rich, two-way conversations with their clients and accommodate interaction with legacy systems and human users. Finally, Workshop supports easy manipulation of coarse-grained messages so that rich documents can be handled without resorting to tedious XML DOM programming. All of these capabilities can be accessed in a simple, declarative fashion that enables all developers not just J2EE experts to get started building Web services today. Even if you are new to the Java programming language, or have never built a J2EE application before, I think you'll be surprised how easy it is to get started with Workshop. Working inside the WebLogic Workshop environment, you can focus on the procedural business code that is important to getting your applications built and leave all of the details of Web service and J2EE plumbing to the application framework. BEA WebLogic Workshop Kick Start will give you an introduction to Web services in general, and teach you the

few Java and J2EE concepts you'll need to know along the way. Rich with examples, this book illustrates the power of Web services, and will help you realize the value they can bring to your company. --Carl Sjogreen, Product Manager, WebLogic Workshop, BEA Systems, Inc  
*Oracle WebLogic Server 12c Administration I Exam 1Z0-133* "O'Reilly Media, Inc."

Oracle Business Activity Monitoring 11g is written for new and intermediate users, key-users and administrators. It focuses on your role in an Oracle Middleware-environment and explains the Concepts, describes the main Screens, gives Step-by-Step instructions with navigation paths and has a Glossary and FAQ-list. Most chapters have Questions and Answers. The book has eight chapters and has 194 screenshots and illustrations. The Topics include: Introduction to Oracle Business Activity Monitor, , Various BAM products in marketplace, BAM and OLAP, Active Studio, Active Viewer, Starting and Stopping of BAM, Main Components of Oracle BAM, ICommands, Data Objects, Creation of an External Data Source,

Alerts, Create an Enterprise Message Source, Settings for connecting applications, Advanced XSL formatting, Creating Enterprise Message Sources for Weblogic App Server, BEA Weblogic Server EMS, Creating Enterprise Message Sources for Microsoft MSMQ, Dimensions, Adding Fields to data Object, Adding Permissions, Adding a Security Filter, Tiled Reports, Columnar Report, Formatting, Email a Report, List Views, Data Modifiers, Action Buttons, Drilling, Calculations, Alert and Alert Rules, Templates, Messages, dependent rule, Create User Accounts, Message Center, Enterprise Message Source Types and much more. What do Oracle users think about these books?" Very well structured and easy to follow, even for beginners." John M. McNamara - Wokingham Borough Council "Highly informative and exemplary, hats off." Sunil Sunder Rao - Apps DBA "I am really happy that I found these books." Peter Lung - Consultant
