Heinemann Public education is suffering attacks that are well funded and extraordinarily complex and

multifaceted. These conditions make it difficult for educators and citizens to gather the information they need to mount meaningful resistance, especially since mainstream media tends to be uncritically supportive of neoliberal reforms. The Orwellian language of reforms is adopted and promoted through news outlets, politicians, and film; thus, arguments against these reforms must bubble up through social media and alternative outlets. By providing a

coherent, comprehensive description of contemporary neoliberal initiatives and analyzing their effects on students, teachers, administrators, and teacher education, this book will allow educators, parents, students, and citizens to strengthen their resolve to save public education and, potentially, work to preserve the promise of democracy. This book examines and uncovers the effects of standardization and privatization

on public education. Contributors consider the how of standardized curriculum and assessment, coupled with philanthropic and corporate pressure, have influenced the experiences of students, parents, and teachers. Divided in sections entitled Testing, Testing; Privatization and Militarization: Redefining Schools; Alienation: Displacing Students and Teachers; and Resistance: Opting Out and Hope for Change, this text

offers a combination of information and inspiration for teachers, teacher educators, policymakers, parents and anyone interested in understanding the current state of public education. Langford's *Advanced Photography* John Wiley & Sons This text provides all the necessary underpinning knowledge for the BTEC National IT Practitioners qualification. It offers: case studies to enable students to apply theory to vocational practice, portfolio builders providing activities

and guidance, and IVA Advice on completing assignments.

The monitoring of indoor air pollutants in a spatio-temporal basis is challenging. A key element is the access to local (i.e., indoor residential, workplace, or public building) exposure measurements.

Unfortunately, the high cost and complexity of most current air pollutant monitors result in a lack of detailed spatial and temporal resolution. As a result, individuals in vulnerable groups (children, pregnant, elderly, and sick people) have little insight into their personal exposure levels. This becomes significant in cases of hyper-local variations and short-term pollution events such as instant indoor activity (e.g., cooking, smoking, and dust resuspension). Advances in sensor miniaturization have encouraged the development of small, inexpensive devices capable of estimating pollutant concentrations. This new class of sensors

presents new possibilities for indoor exposure monitoring. This Special Issue invites research in the areas of the triptych: indoor air pollution monitoring, indoor air modeling, and exposure to indoor air pollution. Topics of interest for the Special Issue include, but are not limited to, the following: low-cost sensors for indoor air monitoring; indoor particulate matter and volatile organic compounds; ozone-terpene chemistry; biological agents indoors; source apportionment; exposure assessment; health effects of indoor air pollutants; occupant perception; climate change impacts on indoor air quality.
