Administration on Windows. This course teaches the Server Version 7.0. Space requirements

basics of the administration and deployment of enterprise applications in the IBM WebSphere Application Server v7.0 Network Deployment environment. This course covers all of the topics required to administer a production WebSphere environment, including troubleshooting, security, databases, messaging, performance, scripting, web services, and clustering.

WebSphere Application Server 7 Administration

The IBM HTTP Server installation includes the administration server, which installs by default during a typical IBM HTTP Server installation. The administration server is the interface that handles requests between the administrative console and the remote IBM HTTP Server defined on the unmanaged node. The administration server must be started by a root user and defined to an unmanaged WebSphere Application Server node.
