“A thoughtful and skillful author.” —Cleveland Plain Dealer One of the most respected writers in the field of speculative fiction, Lois

McMaster Bujold has won numerous accolades and awards, including the Nebula and Locus Awards as well as the fantasy and science fiction genre's most prestigious honor, the Hugo Award for Best Novel, four times (most recently for *Paladin of Souls*). With *The Sharing Knife* series, Bujold creates a brand new world fraught with peril, and spins an extraordinary romance between a young farm girl and the brave sorcerer-soldier entrusted with the defense of the land against a plague of vicious malevolent beings. In *Passage*, volume three in Bujold's breathtaking saga of love, loyalty, and

courage in the face of bigotry and dark magic, the devoted wedded lovers Fawn Bluefield and Dag Redwing Hickory are joined by new companions in their quest to find peace, acceptance, and a place in a most dangerous world.

From one of the nation's

preeminent experts on women and emotion, a breakthrough new book about how to stop negative thinking and become more productive. It's no surprise that our fast-paced, overly self-analytical culture is pushing many people—especially women—to spend countless hours thinking about negative ideas, feelings, and experiences. Renowned psychologist Dr. Susan Nolen-Hoeksema calls this overthinking, and her groundbreaking research shows that an increasing number of women—more than half of those in her extensive study—are doing it too much and too often, hindering their

ability to lead a satisfying life. Overthinking can be anything from fretting about the big questions such as "What am I doing with my life?" to losing sleep over a friend's innocent comment. It is causing many women to end up sad, anxious, or seriously depressed, and Nolen-Hoeksema challenges the assumption—heralded by so many pop-psychology pundits of the last several decades—that constantly expressing and analyzing our emotions is a good thing. In *Women Who Think Too Much*, Nolen-Hoeksema shows us what causes so many women to be overthinkers and provides concrete strategies that can be

used to escape these negative thoughts, move to higher ground, and live more productively. *Women Who Think Too Much* will change lives and is destined to become a self-help classic.

The Hansa Towns

Publications in food technology proliferate; however, noticeable by its absence of coverage is the subject of processing and packaging of particulates in foods. Recent years have seen significant advances which will almost certainly result in substitution of existing and conventional retorting. In addition, when

combined with high temperature/short time (HTST) processing, we can expect substantial further growth, reflecting quality and convenience advantages over products processed from yesterday's technologies. The anticipated growth in particulates is driven by both materials and packaging advances and only requires modest marketing of the organoleptic advantages to establish their place on menu options. The directions taken in packaging developments, especially

those interfacing with the latest and established methods of processing, are increasingly influenced by the need to design packaging on a cradle-to-grave basis. Time was when multi-laminated films on board satisfied the total needs of consumers of aseptic products. The problems of recycling combustible, i.e. energy generating materials laminated with aluminium foil, are becoming sensitive issues in a world preoccupied with recycling, and are creating openings

for alternative and environmentally friendly material combinations. This book brings together advanced technologies in the field, to provide information for professionals with interests in aseptic processing on how to go about selecting a system appropriate to their commercial needs and constraints.

This is the new guide to the design and implementation of file systems in general, and the Be File System (BFS) in particular. This book covers all topics related to file systems, going into considerable depth where traditional operating systems books often stop. Advanced topics are covered in detail such as journaling, attributes, indexing and query processing. Built from scratch as a modern 64 bit, journaled file system, BFS is the primary file system for the Be Operating System (BeOS), which was designed for high performance multimedia

applications. You do not have to be a kernel architect or file system engineer to use Practical File System Design. Neither do you have to be a BeOS developer or user. Only basic knowledge of C is required. If you have ever wondered about how file systems work, how to implement one, or want to learn more about the Be File System, this book is all you will need. * Review of other file systems, including Linux ext2, BSD FFS, Macintosh HFS, NTFS and SGI's XFS. * Allocation policies for placing data on disks and discussion of on-disk data structures used by BFS * How to implement

journaling * How a disk cache works, including cache interactions with the file system journal * File system performance tuning and benchmarks comparing BFS, NTFS, XFS, and ext2 * A file system construction kit that allows the user to experiment and create their own file systems

"Electronic Principles, eighth edition, continues its tradition as a clearly explained, in-depth introduction to electronic semiconductor devices and circuits. This textbook is intended for students who are taking their first course in linear electronics. The prerequisites are a dc/ac circuits course, algebra, and some trigonometry. Electronic Principles provides essential understanding of semiconductor device characteristics, testing, and the practical circuits in which they are found. The text provides clearly explained concepts-written in an easy-to-read conversational style-

establishing the foundation
needed to understand the
operation and troubleshooting
of electronic systems. Practical
circuit examples, applications,
