Time series modeling and forecasting has fundamental importance to various practical domains. Thus a lot of active research works is going on in this subject during several years. Many important models have been proposed in literature for improving the accuracy and effeciency of time series modeling and forecasting.

This is the most accessible book I have read on transfer function analysis from a time-series perspective(as opposed to an Engineering perspective with Fourier and Laplace transforms). Considering the difficulty of the topic, Wei explains things in a easy to understand way, with step-through examples of method.
