Women's Human Rights: Seeking Gender Justice in a Globalising Age explores the emergence of transnational, UN-oriented, feminist advocacy for womens human rights,

---

especially over the past three decades. It identifies the main feminist influences that have shaped the movement liberal, radical, third world and cosmopolitan and exposes how the Western, legalist, state-centric, and liberal biases of mainstream human rights discourse impede the realisation of human rights in womens lives everywhere. The book traces the evolution of the womens human rights movement through an examination of its key issues, debates, and practical interventions in international law and policy arenas. This includes efforts to: Develop global gender equality norms via the UN Womens Convention Frame violence against women as a human rights issue Address gender-based crimes in conflict situations, include women in conflict resolution and post-conflict reconstruction, and challenge new forms of militarism Highlight the gendered human rights dimensions of widening inequalities in a context of neo-liberal globalisation Develop human rights responses to anti-feminist fundamentalist movements with a focus on reproductive and sexual rights Ultimately, Women's Human Rights reaffirms a commitment to critically reinterpreted universal human rights principles and demonstrates the vital role that bottom-up, transnational movements play in making them a reality in women's lives.

Back home in Maine, Molly refuses to believe the telegram that says her pilot father is presumed dead when his plane is shot down in Holland during World War II.

Dear Beast Simon and Schuster

In this compelling and lyrical memoir, renowned classical composer, author and political activist Raymond Deane evokes his near idyllic childhood on Achill Island, his adolescence in Dublin, and his rapid descent into alcoholism. In an alternately humorous and horrific narrative moving swiftly from Ireland to Italy, England, Switzerland, Germany and France, Deane shows us how a lovingly protected childhood is no bulwark against disaster. While no 'misery memoir', Deane does show how memory can seize upon and exaggerate painful experiences to provide a convenient but spurious explanation for irrational behaviour. Throughout his story creative achievements and self-destructive frenzies succeed one another and sometimes coincide. Love is found and lost, and found and lost again. At last his recovery begins at the age of thirty-five when even those closest to him have given up hope.

There's a mantra that real writers know but wannabe writers don't. And the secret phrase is this: **NOBODY WANTS TO READ YOUR SH\*T**. Recognizing this painful truth is the first step in the writer's transformation from amateur to professional. From Chapter Four: "When you understand that nobody wants

to read your shit, you develop empathy. You acquire the skill that is indispensable to all artists and entrepreneurs—the ability to switch back and forth in your imagination from your own point of view as writer/painter/seller to the point of view of your reader/gallery-goer/customer. You learn to ask yourself with every sentence and every phrase: Is this interesting? Is it fun or challenging or inventive? Am I giving the reader enough? Is she bored? Is she following where I want to lead her?

This book includes the proceedings of the 15th International Conference on Complex, Intelligent, and Software Intensive Systems, which took place in Asan, Korea, on July 1 – 3, 2021. Software intensive systems are systems, which heavily interact with other systems, sensors, actuators, devices, and other software systems and users. More and more domains are involved with software intensive systems, e.g., automotive, telecommunication systems, embedded systems in general, industrial automation systems, and business applications. Moreover, the outcome of web services delivers a new platform for enabling software intensive systems. Complex systems research is focused on the overall understanding of systems rather than its components. Complex systems are very much characterized by the changing environments in which they act by their multiple internal and external interactions. They evolve and adapt through internal and external dynamic interactions. The development of intelligent systems and agents, which is each time more characterized by the use of ontologies and their logical foundations build a fruitful impulse for both software intensive systems and complex systems. Recent research in the field of intelligent systems, robotics, neuroscience, artificial intelligence, and cognitive sciences is very important factor for the future development and innovation of software intensive and complex systems. The aim of the book is to deliver a platform of scientific interaction between the three interwoven challenging areas of research and development of future ICT-enabled applications: Software intensive systems, complex systems, and intelligent systems.
