Cable television is arguably the dominant mass media technology in the U.S. today. *Blue Skies* traces its history in detail, depicting the important events and people that shaped its development, from the precursors of cable TV in the 1920s and '30s to the first community antenna systems in the 1950s, and from the creation of the national satellite-distributed cable networks in the 1970s to the current incarnation of "info-structure" that dominates our lives. Author Patrick Parsons also considers the ways that economics, public perception, public policy, entrepreneurial personalities, the social construction of the possibilities of cable, and simple chance all influenced the development of cable TV. Since the 1960s, one of the pervasive visions of "cable" has been of a ubiquitous, flexible, interactive communications system capable of providing news, information, entertainment, diverse local programming, and even social services.

That set of utopian hopes became known as the "Blue Sky" vision of cable television, from which the book takes its title. Thoroughly documented and carefully researched, yet lively, occasionally humorous, and consistently insightful, *Blue Skies* is the genealogy of our media society.

Ever since Newton Minow taught us sophisticates to bemoan the descent of television into a vast wasteland, the dyspeptic chorus of jeremiahs who insist that television news in particular has gone from gold to dross gets noisier and noisier. Charles Ponce de Leon says here, in effect, that this is misleading, if not simply fatuous. He argues in this well-paced, lively, readable book that TV news has changed in response to broader changes in the TV industry and American culture. It is pointless to bewail its "decline." That's the Way It Is gives us the very first history of American television news, spanning more than six decades, from "Camel News Caravan" to "Countdown with Keith Oberman" and "The Daily Show." Starting in the latter 1940s, television news featured a succession of broadcasters who became household names, even presences: Eric Sevareid, Walter Cronkite,

David Brinkley, Peter Jennings, Brian Williams, Katie Couric, and, with cable expansion, people like Glenn Beck, Jon Stewart, and Bill O'Reilly. But behind the scenes, the parallel story is just as interesting, involving executives, producers, and journalists who were responsible for the field's most important innovations. Included with mainstream network news programs is an engaging treatment of news magazines like 60 Minutes and 20/20, as well as morning news shows like Today and Good Morning America. Ponce de Leon gives ample attention to the establishment of cable networks (CNN, and the later competitors, Fox News and MSNBC), mixing in colorful anecdotes about the likes of Roger Ailes and Roone Arledge. Frothy features and other kinds of entertainment have been part and parcel of TV news from the start; viewer preferences have always played a role in the evolution of programming, although the disintegration of a national culture since the 1970s means that most of us no longer follow the news as a civic obligation. Throughout, Ponce de Leon places his history in a broader cultural context, emphasizing tensions between the "public service" mission of TV news and

the quest for profitability and broad appeal.

Since its initial publication in 1978, Stay Tuned has been recognized as the most comprehensive and useful single-volume history of American broadcasting and electronic media available. This third edition has been thoroughly revised and updated to bring the story of American broadcasting forward to the 21st

century, affording readers not only the history of the most important and pervasive institution affecting our society, but also providing a contextual transition to the Internet and other modern media. The enthusiasm of authors Christopher H. Sterling and John Michael Kittross is apparent as they lead readers through the development of American electronic mass media, from the first electrical communication (telegraph and telephone); through radio and television; to the present convergence of media, business entities, programming, and delivery systems, including the Internet. Their presentation is engaging, as well as informative, promoting an interest in history and making the connections between the developments of yesterday and the industry of today. Features of this third edition include: *chronological and topical tables of contents; *new material reflecting modern research in the field; *a new chapter describing historical developments from 1988 through to the current day; *an

expanded bibliography, including Web site and museum listings; *an updated and expanded glossary and chronology; and *extensive statistical data of the development of television and radio stations, networks, advertising, programming, audiences, and other aspects of broadcasting. Designed for use in undergraduate and graduate courses on the history of American mass media, broadcasting, and electronic media, Stay Tuned also fits well into mass communication survey courses as an introduction to electronic media topics. As a chronicle of American broadcasting, this volume is also engaging reading for anyone interested in old radio, early television, and the origins and development of American broadcasting.

This thorough update to Benjamin Compaine's original 1979 benchmark and 1982 revisit of media ownership tackles the question of media ownership, providing a detailed examination of the current state of the media industry. Retaining the wealth of data of the earlier volumes, Compaine and his co-author Douglas Gomery chronicle the myriad changes in the media industry and the factors contributing to these changes. They also examine how the media industry is being reshaped by technological forces in all segments, as well as by social and cultural reactions to these forces. This third edition of *Who Owns the Media?* has been reorganized and expanded, reflecting the evolution of the media industry structure. Looking beyond conventional wisdom and expectations, Compaine and Gomery examine the characteristics of competition in the media marketplace, present alternative positions on

the meanings of concentration, and ultimately urge readers to draw their own conclusions on an issue that is neither black nor white. Appropriate for media practitioners and sociologists, historians, and economists studying mass media, this volume can also be used for advanced courses in broadcasting, journalism, mass communication, telecommunications, and media education. As a new benchmark for the current state of media ownership, it is invaluable to anyone needing to understand who controls the media and thus the information and entertainment messages received by media consumers.

As the dust settles on the 30th anniversary of Apollo 11, information is now coming to light that throws into serious doubt the authenticity of the Apollo record. New evidence clearly

suggests that NASA hoaxed the photographs taken on the surface of the Moon. These disturbing findings are supported by detailed analysis of the Apollo images by professional photographer David S Percy ARPS and physicist David Groves PhD. The numerous inconsistencies clearly visible in the Apollo photographic account are quite irrefutable. Recent research indicates that the errors evidenced in DARK MOON were deliberately planted by individuals determined to leave clues to the faking in which they were unwillingly involved. DARK MOON is the answer to the question-did the Apollo missions really land a man on the Moon and return him alive and well to Earth, or is the record incorrect?
