States in myriad ways, including increased flooding and storm damage, altered crop yields, lost labor productivity, higher crime, reshaped public-health patterns, and strained energy systems, among many other effects. Combining the latest climate models, state-of-the-art econometric research on human responses to climate, and cutting-edge private-sector risk-assessment tools, Economic Risks of Climate Change: An American Prospectus crafts a game-changing profile of the economic risks of climate change in the United States. This prospectus is based on a critically acclaimed independent assessment of the economic risks posed by climate change commissioned by the Risky Business Project. With new contributions from Karen Fisher-Vanden, Michael Greenstone, Geoffrey Heal, Michael Oppenheimer, and Nicholas Stern and Bob Ward, as well as a foreword from Risky Business cochairs Michael Bloomberg, Henry Paulson, and Thomas Steyer, the book speaks to scientists,

researchers, scholars, activists, and policy makers. It depicts the distribution of escalating climate-change risk across the country and assesses its effects on aspects of the economy as varied as hurricane damages and violent crime. Rarely has an author articulated so well the

hypocrisies of the Catholic Church while conveying the delusions of a writer's life and undermining the fantasy of suburban bliss. Each of these twelve pieces, like all great short fiction, is a crystal-clear snapshot of lives both static and full of chaos. In "The Pond" Highsmith explores the unforeseen calamities that can unalterably shatter a single woman's life, while "The Network" finds sinister loneliness and joy in the mundane yet engrossing
