In An Engine, Not a Camera, Donald MacKenzie argues that the emergence of modern economic theories of finance affected financial markets in fundamental ways. These new, Nobel Prize-winning theories, based on elegant mathematical models of markets, were not simply external analyses but intrinsic parts of economic processes. Paraphrasing Milton Friedman, MacKenzie says that economic models are an engine of inquiry rather than a camera to reproduce empirical facts. More than that, the emergence of an authoritative theory of financial markets altered those markets fundamentally. For example, in 1970, there was almost no trading in financial derivatives such as "futures." By June of 2004, derivatives contracts totaling \$273 trillion were outstanding worldwide. MacKenzie suggests that this growth could never have happened without the development of theories that gave derivatives legitimacy and explained their complexities. MacKenzie examines the role played by finance theory in the two most serious crises to hit the world's financial markets in recent years: the stock market crash of 1987 and the market turmoil that engulfed the hedge fund Long-Term Capital Management in 1998. He also looks at finance theory that is somewhat beyond the mainstream—chaos theorist Benoit Mandelbrot's model of "wild" randomness. MacKenzie's pioneering work in the social studies of finance will interest anyone who wants to understand how America's financial markets have grown into their current form.

In order to maximize the power-to-weight ratio, small, air-cooled utility engines are designed for WOT performance. Low-speed, light-load conditions suffer due to high residual gas retention, poor volumetric efficiency and an unfavorable in-cylinder flow field that can lead to heat release past EVO. Conditions with significant heat release past EVO have been found to contribute as a dominant HC emissions source at low-speed and lightload. The effects of a dual spark configuration, an alternate spark location, and bulk flow improvement through swirl enhancement were investigated on a single-cylinder, air-cooled utility engine. A steady flow analysis of various swirl enhancement techniques was conducted on a steady flow bench with a swirl adaptor to obtain a global view of the intake flow angular momentum. Through in-cylinder pressure recording and exhaust gas sampling, a single-zone heat release and ring-pack model were utilized to analyze

combustion and emissions performance. A similar operating condition was defined and explored to determine the light-load performance of various engine designs to isolate characteristics leading to improved performance. It was found that a dual spark configuration advances combustion leading to a reduction in burn duration, but increased burning rate only occurs when the flame fronts are held independent. With a retarded combustion phasing strategy, HC and NOX emissions were reduced independent of speed and load due to lower ring pack loading and a favorable post-oxidation environment. Conditions with significant heat release past EVO through retarded combustion phasing were found to not increase HC emissions; an oxidation reaction was still in effect. A port blockage that induced a tangential flow was found to significantly improve the part-throttle steady flow swirl coefficient leading to a greater global swirl ratio. Engine combustion tests using this blockage indicated a significant advance of combustion leading to decreased bur

This book aims to define a novel conception of what social entrepreneurship (SE) actually is, and what it is not, starting from a sharp and focused vision of SE: it entails innovations designed to explicitly improve societal well-being, housed within entrepreneurial organizations, which initiate change in society. In so doing, it provides a critical and comprehensive framework for current and future research in the area. Francesco Perrini adopts a novel approach to the SE phenomenon, considering it as a dynamic process created and managed by innovative social entrepreneur (an individual or team) who strives to create new social values in the market and community at large. By now SE has attained a wider and more enthusiastic acceptance in corporate thinking and practice than in the literature. This double line of reasoning, partly theoretical and partly practitioner-based, drives the bottom line of the book. In the first part The New Social Entrepreneurship looks for a consistent answer to a muddle of still-unresolved questions: How can SE be defined? How can

SEVs be identified? What are the main dimensions along which organizations vary and what factors lead to success? What does success mean? Does the way in which an SEV is designed matter? Does it make sense to talk about a social business plan? Is an SEV aligned with traditional sources of financing? And so on. In the second part, the book changes perspective, examining several practical examples of how perspectives on SE are translated into concrete phenomena: 'LocalFeed', CafeDirect, The Sekem Initiative, Teleserinita, the NYC Watershed Agreement, and sustainable tourism in Turkey and so on. They illustrate theoretical frameworks, each enlightening specific aspects of SE and making theory and practice comparisons.

The Italian Model of Management

This book is an essential resource for facilitators seeking to help students develop their knowledge of management practice in Italy. It presents a collection of the best case studies and accompanying teaching notes from the Italian Association for Management Development (ASFOR) competition in 2014. The cases are written by teachers across many of the members of ASFOR in Italy, leading business schools, corporate universities and academia. Knowledge gained by professionals often remains implicit and is rarely shared. By grouping together the award-winning case studies in this volume, readers can gain an important insight into how management is conducted in Italy. This collection shines a light on management practices across several industries. The Italian economy differs from others in that it is one in which small and family-run businesses dominate, and the relationship between the private sector and public life is unique. As a result, The Italian Model of Management provides the opportunity for students to enlarge the Anglo-Saxon model and perspective of management, and to offer cross-cultural learning experiences, based on the distinction of a "Made in Italy" competitive advantage. Each case provides an engaging story, plots the strategic development of the organization in question, and is supported by online teaching guidance and teaching notes.
