A report on the test and evaluation process conducted by DoD of a specific synthetic lubricant called MILITEC-1 that is produced by Militec, Inc., and the assignment and cancellation of national stock numbers 2 (NSN) associated with that product. Militec, Inc., has challenged DoD decisions not to include MILITEC-1 in the fed. supply system. This report examined: (1) the extent to which the military services have tested and evaluated MILITEC-1 as a

small arms lubricant, as a metal conditioner, as a general purpose lubricant, and as a lubricant additive, and with what results; and (2) the extent to which the Defense Logistics Agency followed applicable DoD procedures in assigning and subsequently canceling national stock numbers to MILITEC-1. One of Israel's most celebrated novelists—the acclaimed author of *A Pigeon and a Boy*—gives us a story of village love and vengeance in the early days of British Palestine that is still being played out two generations later. “In the year 1930 three farmers committed suicide here . . . but contrary to the chronicles of our committee and the conclusions of the British policeman, the people of the moshava knew that only two of the suicides had actually taken their own lives, whereas the third suicide had been murdered.” This is the

contention of Ruta Tavori, a high school teacher and independent thinker in this small farming community who is writing seventy years later about that murder, about two charismatic men she loves and is trying to forgive—her grandfather and her husband—and about her son, whom she mourns and misses. In a story rich with the grit, humor, and near-magical evocation of Israeli rural life for which Meir Shalev is beloved by readers, Ruta weaves a tale of friendship between men, and of love and betrayal, which carries us from British Palestine to present-day Israel, where forgiveness, atonement, and understanding can finally happen.

The mechanical engineering curriculum in most universities includes at least one elective course on the subject of reciprocating piston engines. The majority of these courses today emphasize the application of thermodynamics to

engine efficiency, performance, combustion, and emissions. There are several very good textbooks that support education in these aspects of engine development. However, in most companies engaged in engine development there are far more engineers working in the areas of design and mechanical development. University studies should include opportunities that prepare engineers desiring to work in these aspects of engine development as well. My colleagues and I have undertaken the development of a series of graduate courses in engine design and mechanical development. In doing so it becomes quickly apparent that no suitable textbook exists in support of such courses. This book was written in the hopes of beginning to address the need for an engineering-based introductory text in engine design and mechanical development. It is of necessity an overview. Its focus is limited to reciprocating-piston internal-combustion engines – both diesel and spark-ignition engines. Emphasis is specifically on automobile engines, although much of the discussion

applies to larger and smaller engines as well. A further intent of this book is to provide a concise reference volume on engine design and mechanical development processes for engineers serving the engine industry. It is intended to provide basic information and most of the chapters include recent references to guide more in-depth study.

The Lee-Enfield is one of the 20th century's most recognizable and longest-serving military rifles. It was adopted by the British Army in 1895 and only replaced by the L1A1 SLR in 1957. It saw combat from the Boer War onwards, and thousands are still in use today; it is estimated that 17 million have been produced. Soldier's recollections of the rifle are overwhelmingly affectionate (it was known as the Smellie); today it remains a very popular target rifle for

competitive shooting, and modern copies are being manufactured to meet demand. Featuring first-hand accounts, brand-new full-colour artwork and close-up photographs, this is the story of the Lee-Enfield, the innovative, reliable and long-lived rifle that equipped British and other forces through the world wars and beyond.
