Alternative religions attract great public, academic and government

interest in our apparently post-Christian society. Yet how did all the 'alternatives' develop, what are their beliefs and practices and how significant is their impact in terms of the world's religions and society? This book presents a comprehensive introduction to the major forms of alternative religions: Cults, Sects, New Religious Movements, the New Age, Fundamentalism, Pentecostalism, Ethnic Religions and Quasi-religions. Stephen Hunt presents sociological insights into the rise of alternative

religions, their beliefs and practices, their impact, who joins them, and how they are being classified and could be re-classified in the future. Public and legal controversies surrounding some alternative religions, such as the so-called 'dangerous cults', are also explored. This book offers students insights into contemporary themes such as secularisation, post-modernity, links between religion, healing and and changes in our global culture.

The provision and use of traditional, complementary and alternative medicine (CAM) has been growing globally over the last 40 years. As CAM develops alongside - and sometimes integrates with - conventional medicine, this handbook provides the first major overview of its regulation and professionalization from social science and legal perspectives. The Routledge Handbook of Complementary and Alternative Medicine draws on historical and international comparative research to provide a rigorous and thematic examination of the field. It argues that many popular and policy debates are stuck in a polarized and largely asocial discourse, and that interdisciplinary social science perspectives, theorising diversity in the field, provide a much more robust evidence base for policy and practice in the field.

Divided into four sections, the handbook covers: analytical frameworks power, professions and health spaces risk and regulation perspectives for the future. This important volume will interest social science and legal scholars researching complementary and alternative medicine, professional identify and health care regulation, as well as historians and health policymakers and regulators.

Peter Lehmann Publishing  
Alternative splicing (AS) is an important post-transcriptional mechanism that increases protein diversity and may affect mRNA stability and translation efficiency. Despite its importance, our knowledge about its mechanism and regulation is very limited. Although it is known that the regulation of AS is influenced by multiple factors, most previous studies have focused on analyzing an individual regulator. In this dissertation, we apply three types of association rule mining techniques to

discover cis-regulatory motifs or motif groups that are associated with specific AS patterns in mouse. General association rule mining for categorical attributes is used to find "motif=>motif" rules in gene groups that show similar exon skipping patterns. This method provides candidates for interacting motifs. Discretization-based and distribution-based quantitative association rule mining techniques are used to find "motif => exon skipping profile" rules. Many of the discovered motif candidates coincide with known splicing factor binding sites. Our ultimate goal is to find motifs and motif combinations that are involved in the dynamic regulation of AS. Based on our observations we hypothesize that some cis-regulatory elements affect AS only in combination with other elements. Interacting motifs show interesting differences to motifs that act individually. For example, interacting motif pairs are more conserved, they occur on average closer to the splice sites, motif pairs derived from

---

distribution-based association rule mining, occur also in higher multiplicity. Based on these observations, we hypothesize that interacting cis-regulatory motifs might often correspond to weaker binding sites that occur in clusters close to the regulated splice sites.

Alternative Service Delivery: Readiness Check synthesizes academic and practitioner knowledge about alternative service delivery (ASD) systems. This handbook offers information and insights that local governments can use to provide public services more effectively and efficiently. It serves as a primer about alternative service delivery, intended to guide investigation of new approaches to service delivery. It derives from multiple conversations with local government practitioners in Illinois who were frustrated by a lack of guidance on how to think about alternative service delivery methods for public services, and in what circumstances different alternatives were more or less successful. This handbook is written for both appointed managers and

elected officials who are looking for innovative ways to consider service delivery and want to answer the basic question, “ Can we be doing this better? ” Why does your local government want to consider providing public services in new, alternative ways? As the cases in this handbook demonstrate, jurisdictions that successfully develop and implement an alternative service delivery method are driven by a desire to improve service effectiveness. Local governments that move from tactical to strategic thinking about service delivery are the ones more likely to improve services using different forms of alternative service delivery. The kinds of issues and types of questions examined in this handbook range from how to best handle such demand-driven services as allocation of police and fire resources to how to share expensive equipment that your jurisdiction needs only some of the time. The stories, solutions, and evidence are intended to help local government officials understand the differences between delivery alternatives and the prerequisites for developing and implementing each option.

A holistic approach in treating illnesses is becoming a popular trend in the United States. Patients are now frequently using complementary and alternative therapies to cope with illness and symptoms caused by mainstream medicine. Hospitals and community partners are collaborating to implement new programs and meet patient demand for alternative forms of treatment. A participatory action research model was utilized to examine key stakeholders' perceptions on the impact and value of complementary and alternative medicine (CAM). Key Stakeholders included community business partners (n=4) and the program facilitators (n=5). Qualitative in-depth interview schedules were utilized to gather statistical data. Results revealed positive benefits for everyone involved in complementary and alternative therapies. CAM programs seem to offer elements of psychological and physical wellbeing for patients as well as caregivers and besides gaining a new perspective on patients with cancer and their local hospital, key stakeholders gained a surplus of customers for their business. Results also revealed Memorial Medical Center is creating more awareness of their holistic services in and out of the community by successfully implementing complementary and alternative therapies. The impact CAM may have

on caregivers, communities and economic revenue for all collaborative partners should be further empirically analyzed.

Integration of complementary and alternative medicine therapies (CAM) with conventional medicine is occurring in hospitals and physicians offices, health maintenance organizations (HMOs) are covering CAM therapies, insurance coverage for CAM is increasing, and integrative medicine centers and clinics are being established, many with close ties to medical schools and teaching hospitals. In determining what care to provide, the goal should be comprehensive care that uses the best scientific evidence available regarding benefits and harm, encourages a focus on healing, recognizes the importance of compassion and caring, emphasizes the centrality of relationship-based care, encourages patients to share in decision making about therapeutic options, and promotes choices in care that can include complementary therapies where appropriate. Numerous approaches to delivering integrative medicine have evolved. Complementary and Alternative Medicine in the United States

identifies an urgent need for health systems research that focuses on identifying the elements of these models, the outcomes of care delivered in these models, and whether these models are cost-effective when compared to conventional practice settings. It outlines areas of research in convention and CAM therapies, ways of integrating these therapies, development of curriculum that provides further education to health professionals, and an amendment of the Dietary Supplement Health and Education Act to improve quality, accurate labeling, research into use of supplements, incentives for privately funded research into their efficacy, and consumer protection against all potential hazards. Historically, regulations governing chemical use have often focused on widely used chemicals and acute human health effects of exposure to them, as well as their potential to cause cancer and other adverse health effects. As scientific knowledge has expanded there has been an increased awareness of the mechanisms through which chemicals may exert harmful effects on human health, as well as their effects on other species and ecosystems. Identification of high-priority chemicals and other chemicals of concern has prompted a growing number of state and local

governments, as well as major companies, to take steps beyond existing hazardous chemical federal legislation. Interest in approaches and policies that ensure that any new substances substituted for chemicals of concern are assessed as carefully and thoroughly as possible has also burgeoned. The overarching goal of these approaches is to avoid regrettable substitutions, which occur when a toxic chemical is replaced by another chemical that later proved unsuitable because of persistence, bioaccumulation, toxicity, or other concerns. Chemical alternative assessments are tools designed to facilitate consideration of these factors to assist stakeholders in identifying chemicals that may have the greatest likelihood of harm to human and ecological health, and to provide guidance on how the industry may develop and adopt safer alternatives. A Framework to Guide Selection of Chemical Alternatives develops and demonstrates a decision framework for evaluating potentially safer substitute chemicals as primarily determined by human health and ecological risks. This new framework is informed by previous efforts by regulatory agencies, academic institutions, and others to develop alternative assessment frameworks that could be operationalized. In addition to hazard assessments, the framework incorporates steps

for life-cycle thinking - which considers possible impacts of a chemical at all stages including production, use, and disposal - as well as steps for performance and economic assessments. The report also highlights how modern information sources such as computational modeling can supplement traditional toxicology data in the assessment process. This new framework allows the evaluation of the full range of benefits and shortcomings of substitutes, and examination of tradeoffs between these risks and factors such as product functionality, product efficacy, process safety, and resource use. Through case studies, this report demonstrates how different users in contrasting decision contexts with diverse priorities can apply the framework. This report will be an essential resource to the chemical industry, environmentalists, ecologists, and state and local governments.

This fascinating book explores the changing relationship between orthodox and alternative medicine in Britain and the United States from the sixteenth century to the present day. Mike Saks sees the

development of orthodox and alternative medicine as two sides of the same coin and his analysis centers on the role of professionalization in health care. In the sixteenth century, the line between orthodox and alternative medicine was blurred. By the nineteenth and twentieth centuries, the increasing professionalization of orthodox bio-medicine had marginalized medical alternatives. In recent years, following the growth of a strong counter-culture in the 1960s and 1970s, perceptions of the relationship between the two forms of practice have begun to change again. The de-professionalization of orthodox medicine is being debated, while ironically, alternative medicine has become increasingly professionalized. Mike Saks considers the political dynamics of the process of professionalization, and looks at the dilemmas posed for both medical orthodoxy and alternative medicine in the development of a more integrated health care system in Britain and the United States in the future.

Alternative Investments: A Primer for Investment Professionals provides an overview of alternative investments for institutional asset allocators and other overseers of portfolios containing both traditional and alternative assets. It is designed for those with substantial experience regarding traditional investments in stocks and bonds but limited familiarity regarding alternative assets, alternative strategies, and alternative portfolio management. The primer categorizes alternative assets into four groups: hedge funds, real assets, private equity, and structured products/derivatives. Real assets include vacant land, farmland, timber, infrastructure, intellectual property, commodities, and private real estate. For each group, the primer provides essential information about the characteristics,

challenges, and purposes of these institutional-quality alternative assets in the context of a well-diversified institutional portfolio. Other topics addressed by this primer include tail risk, due diligence of the investment process and operations, measurement and management of risks and returns, setting return expectations, and portfolio construction. The primer concludes with a chapter on the case for investing in alternatives.

Complementary and Alternative Medicine in the United States Wiley-IEEE Press  
Business structures, employment relationships, job characteristics, and worker outcomes have changed in the United States over the last few decades â€" in some ways unpredictably. A high level of interest exists among policy makers and researchers in addressing concerns about the future of work in the United States. These concerns are heightened by the perceived fracturing of relationships between workers and employers, the loss of safety net protections and benefits to workers, the growing importance of access to skills and education as the impacts of new technologies and

automation are felt, and the market-based pressure that companies face to produce short-term profits, sometimes at the expense of long-term value. These issues, as well as related ones such as wage stagnation and job quality, are often associated with alternative work arrangements (AWAs) — which include independent-contractor and other nonemployee jobs, work through intermediaries such as temporary help agencies and other contract companies, and work with unpredictable schedules — although they also pertain to many standard jobs. A better understanding of the magnitude of and trends in AWAs, along with the implications for job quality, is needed to develop appropriate policies in response to the changing nature of work. *Measuring Alternative Work Arrangements for Research and Policy* reviews the Contingent Worker Supplement (CWS) of the Current Population Survey (CPS) for the Bureau of Labor Statistics (BLS) in the U.S. Department of Labor. The CWS provides key measures of temporary (contingent) work, alternative work arrangements, and the "gig" economy. Disagreements, however, exist among

researchers, policy makers, and other stakeholders about the definitions and measures of these concepts and priorities for future data collection. The report also reviews measures of employment, earnings, and worker well-being in temporary and alternative work arrangements that can be estimated using household survey data, such as those generated by the CWS, as well as measures that can be produced using administrative, commercial, and combined data sources. The comparative advantages and complementarities of different data sources will be assessed, as well as methodological issues underpinning BLS's measurement objectives. National Academies Press
