This volume focuses on the major aspects of post-transcriptional mRNA processing in the nucleus of eukaryotic cells. Each of the described mRNA reactions is required for proper gene expression and can also serve as a control point for regulating the expression of many genes, for example during embryonic development or in

different cell types. The different chapters review the assembly of newly synthesized nuclear mRNA transcripts into hnRNP particles and catalytically active spliceosomes; the structure and mechanism of action of small nuclear ribonucleoprotein particles and protein factors that catalyze pre-mRNA splicing in mammalian cells and in yeast; the regulation of gene expression and generation of protein isoform diversity by alternative splicing; the mechanisms of 3' end cleavage and polyadenylation; the architecture of the cell nucleus in relation to these

processes and to the localization of the relevant substrates and factors; the diverse mechanisms of RNA processing by ribozymes and their potential relevance for nuclear mRNA processing; the mechanism of spliced-leader addition by trans-splicing in nematodes and trypanosomes; and the process of insertion/deletion mRNA editing in kinetoplastid protozoa. In each chapter, leading researchers have provided detailed, critical reviews of the history, experimental approaches, major advances, current ideas and models, as well as future

directions, for each of these active areas of research.

The first general consumer book ever on the powerful, award-winning, scientifically proven new system of intervention that is turning the recovery field on its head.

Historically there have been few options available for individuals seeking help for treatment-resistant loved ones suffering from substance abuse. Co-author Dr. Robert Meyers spent ten years developing a treatment program that helps concerned significant others both improve the quality of their lives and learn how to make treatment an

attractive option for their partners who are substance abusers.

Get Your Loved One Sober describes this multi-faceted program that uses supportive, non-confrontational methods to engage substance abusers into treatment. Called Community Reinforcement and Family Training (CRAFT), the program uses scientifically validated behavioral principles to reduce the loved one's substance use and to encourage him or her to seek treatment. Equally important, CRAFT also helps loved ones reduce personal stress and introduce meaningful, new sources of satisfaction into their life. Key Features: --CRAFT is more effective than other types of

interventions. This breakthrough new system is sweeping the recovery field. This is its first introduction to the general public.

--Contains simple exercises readers can practice at their own pace, with no costly or heart-breaking interventions.

--Proven successful for numerous addictions, not just alcoholism.

Alternative splicing is an important posttranscriptional process in eukaryotes. It dramatically expands the proteome and contributes essentially to the

---

regulation of gene expression. Cis-acting regulatory motifs play a pivotal role in the regulation of alternative splicing. Many human diseases involved with aberrant (alternative) splicing are caused by mutations of splicing regulatory motifs. However, due to the short, degenerate and context-dependent nature, the prediction of cis-acting splicing motifs is a very challenging task. In this dissertation, we focus on discovery of splicing signals from sequences. This may help to reveal the integrated splicing code and to understand the regulation of gene expression in the resolution of exon level. In chapter one, we review the up-to-date research development in alternative splicing and its regulation, as well as the experimental and computational approaches in genome-wide alternative splicing analysis. We describe a large-scale data analysis experiment to discover AS motifs in chapter two. We applied a computational framework to re-analyze a dataset containing about 3,000 cassette exons and skipping rates for regulatory motifs. The alternative spliced events were clustered by their expression profiles to find co-regulated genes. Rather than using a fixed cutoff as cluster boundary, we used systematic sampling to sample sequence clusters and eliminated redundant motifs predicted from overlapping clusters. We conclude that these predicted motifs

---

may be promising candidates responsible for AS regulation by comparison to known motifs and by positional bias. In chapter three, we describe a new approach to discover short and degenerate AS motifs. We implemented a two-step approach incorporating skipping rates in motif discovery. In the simulation study, we show that this approach is especially suitable to discover short and highly degenerate motifs. Analysis of cassette exons in Central Nervous

Molecular Biology of The Cell IRL Press Integration of complementary and alternative medicine therapies (CAM) with conventional medicine is occurring in hospitals and physicians offices, health maintenance organizations (HMOs) are covering CAM therapies, insurance coverage for CAM is increasing, and integrative medicine centers and clinics are being

established, many with close ties to medical schools and teaching hospitals. In determining what care to provide, the goal should be comprehensive care that uses the best scientific evidence available regarding benefits and harm, encourages a focus on healing, recognizes the importance of compassion and caring, emphasizes the centrality of relationship-based care, encourages patients to share

---

in decision making about therapeutic options, and promotes choices in care that can include complementary therapies where appropriate. Numerous approaches to delivering integrative medicine have evolved. Complementary and Alternative Medicine in the United States identifies an urgent need for health systems research that focuses on identifying the elements of these models, the outcomes of care delivered in

these models, and whether these models are cost-effective when compared to conventional practice settings. It outlines areas of research in convention and CAM therapies, ways of integrating these therapies, development of curriculum that provides further education to health professionals, and an amendment of the Dietary Supplement Health and Education Act to improve quality, accurate

labeling, research into use of supplements, incentives for privately funded research into their efficacy, and consumer protection against all potential hazards. were crucial to the conquest of polio, for example, and they will undoubtedly be one of the keystones in AIDS research. However, some persons believe that the cost to the animals is often high. Authored by a committee of experts from various fields, this book discusses the benefits that have resulted from animal research, the scope of animal research today, the concerns of advocates of

animal welfare, and the prospects for finding alternatives to animal use. The authors conclude with specific recommendations for more consistent government action. Too many examples of what passes for educational innovation today—MOOCs especially—focus on transactions, on questions of delivery. In *Alternative Universities*, David J. Staley argues that modern universities suffer from a poverty of imagination about how to reinvent themselves. Anyone seeking innovation in

higher education today should concentrate instead, he says, on the kind of transformational experience universities enact. In this exercise in speculative design, Staley proposes ten models of innovation in higher education that expand our ideas of the structure and scope of the university, suggesting possibilities for what its future might look like. What if the university were designed around a curriculum of seven broad cognitive skills or as a series of global gap year experiences?

What if, as a condition of matriculation, students had to major in three disparate subjects? What if the university placed the pursuit of play well above the acquisition and production of knowledge? By asking bold "What if?" questions, Staley assumes that the university is always in a state of becoming and that there is not one "idea of the university" to which all institutions must aspire. This book specifically addresses those engaged in university strategy—university presidents, faculty, policy experts,

---

legislators, entrepreneurs—those involved in what Simon Marginson calls "university making." Pairing a critique tempered to our current moment with an explanation of how change and disruption might contribute to a new "golden age" for higher education, *Alternative Universities* is an audacious and essential read. *Brain Transcriptome* Simon and Schuster The fourth edition of the foundational, widely adopted AAC textbook *Augmentative and Alternative Communication* is

the definitive introduction to AAC processes, interventions, and technologies that help people best meet their daily communication needs. Future teachers, SLPs, OTs, PTs, and other professionals will prepare for their work in the field with critical new information on advancing literacy skills; conducting effective, culturally appropriate assessment and intervention; selecting AAC vocabulary tailored to individual needs; using new consumer technologies as affordable, nonstigmatizing

communication devices; promoting social competence supporting language learning and development; providing effective support to beginning communicators; planning inclusive education services for students with complex communication needs; and improving the communication of people with specific developmental disabilities and acquired disabilities. An essential core text for tomorrow's professionals--and a key reference for in-service practitioners--this

---

fourth edition prepares readers to support the communicative competence of children and adults with a wide range of complex needs.

How to Establish an Alternative School Thomas Nelson  
Leading landscape architect and planner Carl Steinitz has developed an innovative GIS-based simulation modeling strategy that considers the demographic, economic, physical, and

environmental processes of an area and projects the consequences to that area of various land-use planning and management decisions. The results of such projections, and the approach itself, are known as "alternative futures." *Alternative Futures for Changing Landscapes* presents for the first time in book form a detailed case study of one alternative

futures project—an analysis of development and conservation options for the Upper San Pedro River Basin in Arizona and Sonora, Mexico. The area is internationally recognized for its high levels of biodiversity, and like many regions, it is facing increased pressures from nearby population centers, agriculture, and mining

---

interests. Local officials and others planning for the future of the region are seeking to balance the needs of the natural environment with those of local human communities. The book describes how the research team, working with local stakeholders, developed a set of scenarios which encompassed public opinion on the major issues facing the area. They then simulated

an array of possible patterns of land uses and assessed the resultant impacts on biodiversity and related environmental factors including vegetation, hydrology, and visual preference. The book gives a comprehensive overview of how the study was conducted, along with descriptions and analysis of the alternative futures that resulted. It

includes more than 30 charts and graphs and more than 150 color figures. Scenario-based studies of alternative futures offer communities a powerful tool for making better-informed decisions today, which can help lead to an improved future. *Alternative Futures for Changing Landscapes* presents an important look at this promising approach and how it works

for planners, landscape architects, local officials, and anyone involved with making land use decisions on local and regional scales. Complementary and Alternative Medicine in the United States John Wiley & Sons The U.S. military has a stockpile of approximately 400,000 tons of excess, obsolete, or unserviceable munitions. About 60,000 tons are added

to the stockpile each year. Munitions include projectiles, bombs, rockets, landmines, and missiles. Open burning/open detonation (OB/OD) of these munitions has been a common disposal practice for decades, although it has decreased significantly since 2011. OB/OD is relatively quick, procedurally straightforward, and inexpensive.

However, the downside of OB and OD is that they release contaminants from the operation directly into the environment. Over time, a number of technology alternatives to OB/OD have become available and more are in research and development. Alternative technologies generally involve some type of contained destruction of the energetic

---

materials, including contained burning or contained detonation as well as contained methods that forego combustion or detonation. Alternatives for the Demilitarization of Conventional Munitions reviews the current conventional munitions demilitarization stockpile and analyzes existing and emerging disposal, treatment, and

reuse technologies. This report identifies and evaluates any barriers to full-scale deployment of alternatives to OB/OD or non-closed loop incineration/combustion, and provides recommendations to overcome such barriers. The Open Source Alternative Houghton Mifflin Harcourt Strengthen programs of family and community engagement to

promote equity and increase student success! When schools, families, and communities collaborate and share responsibility for students education, more students succeed in school. Based on 30 years of research and fieldwork, the fourth edition of the bestseller School, Family, and Community Partnerships: Your Handbook for Action, presents tools and guidelines

to help develop more effective and more equitable programs of family and community engagement. Written by a team of well-known experts, it provides a theory and framework of six types of involvement for action; up-to-date research on school, family, and community collaboration; and new materials for professional development and on-going technical

assistance. Readers also will find: Examples of best practices on the six types of involvement from preschools, and elementary, middle, and high schools Checklists, templates, and evaluations to plan goal-linked partnership programs and assess progress CD-ROM with slides and notes for two presentations: A new awareness session to

orient colleagues on the major components of a research-based partnership program, and a full One-Day Team Training Workshop to prepare school teams to develop their partnership programs. As a foundational text, this handbook demonstrates a proven approach to implement and sustain inclusive, goal-linked programs of partnership. It

---

shows how a good partnership program is an essential component of good school organization and school improvement for student success. This book will help every district and all schools strengthen and continually improve their programs of family and community engagement. Alternative Work Organizations Academic Press In this collection, 17 leading scholars based in Solomon Islands, Fiji, Papua New Guinea, Timor-Leste, Australia, New Zealand, the United States and China analyse key dimensions of the changing relationship between China and the Pacific Islands and explore the strategic,

economic and implications for regional actors. The China Alternative includes chapters on growing great power competition in the region, as well as the response to China's rise by the US and its Western allies and the island countries themselves. Other chapters examine key dimensions of China's Pacific engagement, including Beijing's programs of aid and diplomacy, as well as the

massive investments of the Belt and Road Initiative. The impact of China's rivalry for recognition with Taiwan is examined, and several chapters analyse Chinese communities in the Pacific, and their relationships with local societies. The China Alternative provides ample material for informed judgements about the ability of island leaders to maintain their agency in the changing regional order, as well as other

issues of significance to the peoples of the region. ‘ China ’ s “ discovery ” of the diverse Pacific islands, intriguingly resonant of the era of European explorers, is impacting on this too-long-overlooked region through multiple currents that this important book guides us through. ’

China Alternative is a must-read for all students and practitioners interested in

understanding the new geopolitics of the Pacific. It assembles a stellar cast of Pacific scholars to deeply explore the impact of the changing role of China on the Pacific islands region. Significantly, it also puts the Pacific island states at the centre of this analysis by questioning the collective agency they might have in this rapidly evolving strategic context. ’ —Greg Fry, The Australian
