Soon to be banned in Beijing, this work suggests that Lin Zexu, often called the first modern Chinese nationalist, popular icon for present-day prohibitionists, who legend says caused the first Opium War (1839-1842) by destroying some 20,000 chests of British opium, may deserve a second look from historians. His method of using lime and salt to "destroy" the opium simply shares too many parallels with European methods for extracting morphine from opium. Morphine salts were sold in both China and Europe in the 19th century as substitutes for opium or as opium "cures". Could the mandarin Lin Zexu have stolen from the British, conned the Americans, hastened the downfall of the parasitical Manchu dynasty, and manufactured a simple morphine salt? -- Graffii Milante, Valpaaiso, Chile --from book cover.

Did you drink a glass of matter today? Do you carry your matter to school with you? What kind of matter do you like on your pizza? You probably don't think twice about the items you use on a regular basis, but all the stuff in the universe - from a tiny speck of dust on the floor to the stars far, far away in our galaxy - is made of matter. Well-known science writers Alvin and Virginia Silverstein and Laura Silverstein Nunn explain what is inside matter, how it forms different states, how it is defined with the elements of the modern periodic table, and how chemical reactions take place. The authors also reveal current research on matter, showing how scientists are finding ways to use substances - even garbage - to create brand new resources and substitutes for items with limited supplies.
