The 35th anniversary edition of the classic how-to book that has helped millions of artists learn to draw. When it was originally published in 1970, How to Draw What You See zoomed to the top of Watson-Guptill’s best-seller list—and it has remained there ever since. “I believe that you must be able to draw things as you see them—realistically,” wrote Rudy de Reyna in his introduction. Today, generations of artists have learned to draw what they see, to truly capture the world around them, using de Reyna’s methods. How to Draw What You See shows artists how to recognize the basic shape of an object—cube, cylinder, cone, or sphere—and use that shape to draw the object, no matter how much detail it contains.

Or do things look different, depending on who’s doing the looking? For example, to a human, an orangutan is small like a child. But to a flea, it’s gigantic! Here’s a quirky and original introduction to the idea of perspective and the importance of recognizing that each of us has our own way of seeing things. Kids who feel too small — or too big — in the world will be happy to learn: Size is in the eye of the beholder!
