### 5 Engine Oil Myths | HowStuffWorks

SAE 30 - Warmer temperatures, most common oil for small engines. SAE 10W-30 - Varying temperature range, this grade of oil improves cold-weather starting, but may increase oil consumption. Synthetic SAE 5W-30 - Best protection at all temperatures as well as improved starting with less oil consumption. SAE 5W-30 - Very cold temperatures.

Diesel engines need a high viscosity oil or a synthetic oil.

Since these engines combust at much higher compression ratio than gasoline engines, the oil used in the motor has to be able to withstand tremendous forces, usually of 40,000 to 50,000 psi. Most newer diesel engines will recommend 15W-40 because it is heavier and thicker.
