Woodpeckers are distinguished by several anatomical features, including: short legs and long toes to assist in climbing a head built to withstand repeated hammering a long, straight bill designed for chopping wood a long tongue with a barbed end to extract hidden prey nostrils covered with feathers to keep them free of wood debris. 100 color photographs capture the intriguing

The book begins with statehood and continues with Congress's decision to expand jurisdiction of the original 1836 District Court of Arkansas to include the vast Indian Territory to the west. The territory's formidable size and rampant lawlessness brought in an overwhelming number of cases. The

situation was only somewhat mitigated in 1851, when Congress split the state into eastern and western districts, which were still served by just one judge who travelled between the two courts. A new judgeship for the Western District was created in 1871, and new seats for that court were established, but it wasn't until 1896 that Congress finally ended all jurisdiction of Arkansas's Western District Court over the Indian Territory.
