defined in 1987 by the 18th General Conference on Weights and Measures and in use from 1990, is implemented using the Josephson effect for exact frequency-to-voltage conversion, combined with the caesium frequency standard. For the Josephson constant,  $K_J = 2e/h$  (where  $e$  is the elementary charge and  $h$  is the Planck constant), a "conventional" value  $K_{J-90} = 0 \dots$
