This book is the revised 1941 mid-century guide on the basic principles of Shop from the prestigious Henry Ford Trade School, first published in 1934.

The book was used by students attending Shop Theory classes and focusses on the historical development, principles of construction, and use, care, and operation of hand tools, precision tools, and the usual toolroom machines and equipment. The lesson sheet method of instruction, supplemented by lecture and discussion, is used.

This compilation of the sheets, which was revised and brought up

to date, should prove valuable as a reference for students and shop instructors.

How are businesses responding to global changes in markets driven by changes in technology? Whatever the industry, the trends are familiar: globalization and the rise of industrial conglomerates, mergers and acquisitions, the networking of businesses and markets, outsourcing and shifts in the distribution of resources and production, all reflected in the emergence of new players, new products and services and new forms of competition. As arguably the first knowledge-based business, book publishing provides an ideal setting for the study of challenge and opportunity. The industry is currently experiencing fierce levels of competition, extreme financial pressures, restructuring and the threat of technology-induced obsolescence. Added to these are the challenges posed by new and potential entrants to the market, the emergence of new

---

products and services, new ways of doing business, including trading in virtual markets, and the vulnerability of traditional business models. The suitability of book publishing as a context for researching the emergence of knowledge-based business becomes all too apparent. Through combining primary research with secondary analysis drawn from the relevant literatures, *Books, Bytes and Business* is both a readable and informative account of business in the knowledge-based economy.

Since the rise of the smartphone, apps have become entrenched in billions of users' daily lives. Accessible across phones and tablets, watches and wearables, connected cars, sensors, and cities, they are an inescapable feature of our current culture. In this book,

Gerard Goggin provides a comprehensive and authoritative guide to the development of apps as a digital media technology. Covering the technological, social, cultural, and policy dynamics of apps, Goggin ultimately considers what a post-app world might look like. He argues that apps represent a pivotal moment in the development of digital media, acting as a hinge between the visions and realities of the "mobile," "cyber," and "online" societies envisaged since the late 1980s and the imaginaries and materialities of the digital societies that emerged from 2010. Apps offer frames, construct tools, and constitute "small worlds" for users to reorient themselves in digital media settings. This fascinating book will reframe the conversation about the software that underwrites our digital worlds. It is essential reading for students and scholars of media and communication, as well as for anyone interested

**Emergent Strategies for E-Business Processes, Services and Implications: Advancing Corporate Frameworks** John Wiley & Sons

In the late 1990s, the MP3 became the de facto standard for digital audio files and the networked computer began to claim a significant place in the lives of more and more

listeners. The dovetailing of these two circumstances is the basis of a new mode of musical production and distribution where new practices emerge. This book is not a definitive statement about what the new music industry is. Rather, it is devoted to what this new industry is becoming by examining these practices as experiments, dedicated to negotiating what is replacing an "object based" industry oriented around the production and exchange of physical recordings. In this new economy, constant attention is paid to the production and licensing of intellectual property and the rise of the "social musician" who has been encouraged to become more entrepreneurial. Finally, every element of the industry now must consider a new type of audience, the "end user", and their productive and distributive capacities around which services and musicians must orient their practices and investments.
