The objective of this state-of-the-art survey is to give a coherent overview of the main topics and results achieved by the Network of Excellence REVERSE on 'Reasoning on the Web', funded by the European Commission and Switzerland within the '6th Framework Programme' (FP6), from 2004 to 2008. The material has been organized into eight chapters, each of which addresses one of the main topics of REVERSE: hybrid reasoning with rules and ontologies, lessons in versatility or how query languages adapt to the Web, evolution and reactivity in the Semantic Web, rule-based policy representations and reasoning, component models for Semantic Web languages, controlled English for reasoning on the Semantic Web, semantic search with GoPubMed, and information integration in bioinformatics with ontologies and standards. Each chapter gives an in-depth coverage of the subject and provides an extensive bibliography with pointers to further literature.

-- What if you weren't sexually attracted to

anyone? A growing number of people are

identifying as asexual. They aren't

sexually attracted to anyone, and they

consider it a sexual orientation—like gay,

straight, or bisexual. Asexuality is the

invisible orientation. Most people believe

that "everyone" wants sex, that

"everyone" understands what it means to

be attracted to other people, and that

"everyone" wants to date and mate. But

that's where asexual people are left

out—they don't find other people sexually

attractive, and if and when they say so, they

are very rarely treated as though that's

okay. When an asexual person comes out,

alarming reactions regularly follow; loved

ones fear that an asexual person is sick, or

psychologically warped, or suffering from

abuse. Critics confront asexual people with

accusations of following a fad, hiding

homosexuality, or making excuses for

romantic failures. And all of this contributes

to a discouraging master narrative: there is

no such thing as "asexual." Being an

---

asexual person is a lie or an illness, and it needs to be fixed. In *The Invisible Orientation*, Julie Sondra Decker outlines what asexuality is, counters misconceptions, provides resources, and puts asexual people's experiences in context as they move through a very sexualized world. It includes information for asexual people to help understand their orientation and what it means for their relationships, as well as tips and facts for those who want to understand their asexual friends and loved ones.

Endocrine and Biochemical Development of the Fetus and Neonate Mango Media Inc. Sometimes called "A Fourth Orientation", asexuality is a sexual orientation characterized by a persistent lack of sexual attraction toward any gender. This book explores love, sex, and life, from the asexual point of view. This book is for anyone, regardless of orientation. Whether you're asexual, think you might be, know someone who is, or just want to learn more about what asexuality is (and isn't), there's something inside for you. This is one

of the first books exclusively dedicated to the subject of asexuality as a sexual orientation. Written by an asexual, it discusses the topic from the inside.

The annual meeting of the Perinatal Biochemical Group of the Spanish Biochemical Society held in Madrid on December 15-16, 1989, provided an excellent opportunity to bring together a group of distinguished investigators both from Spain and from abroad with a common interest in developmental endocrinology and biochemistry. The aim of the symposium was to present and discuss the most recent developments in the areas of endocrine and biochemical processes critical to normal growth and maturation of the newborn. To achieve a high degree of interaction among the participants, subject reviews as well as short communications were included in the program. The reviews provided in-depth information on selected important topics. The purpose of short communications was two fold: (i) to provide a forum to discuss on-going investigations on related areas; and (ii) to present opportunities for active participation by young investigators. This format proved very successful in generating fruitful discussions among the participants. Taken together the review chapters and the short communications have resulted in a coherent and unified subject

presentation. Advances in biochemistry, molecular biology and cell biology have provided not only new and exciting experimental approaches but also have opened up new directions in the investigation of differentiation and developmental processes at cellular, molecular and biochemical levels during the early stages of growth and maturation. In recent years a wealth of information in these areas of development has emerged at a rapid rate. Many pre-service and beginning early childhood teachers question if critical literacy is do-able with young children, particularly in the current top-down educational climate. Critical Literacies and Young Learners shows how it is possible, even in the context of the mandates and pressures so many teachers experience, and honors the sophisticated and complex social theorists that young children are. Featuring a mix of groundbreaking work by iconic researchers and teachers and original contributions by emerging scholars and

educators in the field, the text illustrates a range of approaches to doing critical literacy with young children and, at the same time, addresses the Common Core Standards. Part I provides several orienting frameworks on critical literacy, giving specific attention to its relationship to the Common Core Standards. Part II features chapters describing critical literacy in practice, grouped in 4 thematic clusters: using texts from popular culture and everyday life; focusing on issues-oriented texts and cultural identity; functional linguistic analysis of texts; interdisciplinary that engage young learners in critical social action projects. Part III addresses the micro-political contexts of teaching critical literacy.
