Ferrari Serial Numbers  
Part II is the only  
publicly available  
Ferrari Serial Number  
database. The title  
covers the even  
numbered chassis  
(racing cars) through  
serial number 1050.  
Compiled in 1989 by  
preeminent Ferrari  
Historians Hilary Raab  
and Dyke Ridgley, the  
title is the definitive  
serial number  
database. The edition  
presented here is

unchanged from the  
original 1989 version  
and has not been  
updated. While some of  
the information  
regarding the cars has  
subsequently changed,  
the title is still a unique

(Book). The Gibson Les Paul Standard 1958-1960 is one of the greatest designs to emerge from Gibson. At first, it was little appreciated and quickly discontinued. However, the UK blues explosion of the 1960s

---

changed everything and these guitars would begin to shape the music for generations to come. The USA quickly picked up this new direction and players such as Mike Bloomfield and Duane Allman then used the Bursts to great effect. Demand for the guitar began in earnest in the 1970s and they now fetch astronomical prices. The Gibson Custom Shop is working diligently on many aspects of their historic Les Pauls bringing them as close to the originals as possible. Not only did the players make this the most collectable guitar in the vintage market but collectors and weekend players played a huge role in its climb to the top. Visually, it is probably one of the most beautiful solid body guitars ever made.

Unlike some other reproductions of classic texts (1) We have not used OCR(Optical Character Recognition), as this leads to bad quality books with introduced typos. (2) In books where there are images such as portraits, maps, sketches etc We have endeavoured to keep the quality of these images, so they represent accurately the original artefact. Although occasionally there may be certain imperfections with these old texts, we feel they deserve to be made available for future generations to enjoy.

### **Serial Number Reference Book for Metalworking Machinery**

"Serial number restoration is a common and successful process of revealing obliterated serial numbers on firearms. In a crime laboratory setting, obliterated serial numbers are commonly

---

processed in order to tie a person to a crime scene or provide an investigative lead for officers. Currently serial numbers are restored using a chemical etchant method that can eat away at the metal on the firearm even after the examination is complete. It can also take several hours to complete and only provide an examiner with a partial number. There are other nondestructive options however little to no literature is available. The purpose of this study is to discover new methods for nondestructive serial number restoration and to compare them to the traditional chemical method used. Metal bars of premeasured obliteration depths and different compositions were examined using three proposed experimental methods: near infrared imaging, cold frost, and scanning acoustic microscopy. Results did not

indicate significant difference in the median number of visible digits recovered for each of the three proposed methods compared to the traditional chemical method. There were significant results in the median number of composition utilized and depth of obliteration. This indicates that different firearm compositions and depth of obliteration has an effect on serial number restoration.."--Abstract.
