Methodological know-how has become one of the key qualifications in contemporary linguistics, which has a strong empirical focus. Containing 23 chapters, each devoted to a different research method, this volume brings together the expertise and insight of a range of established practitioners. The chapters are arranged in three parts, devoted to three different stages of empirical research: data collection, analysis and evaluation. In addition to detailed step-by-step introductions and illustrative case studies focusing on variation and change in English, each chapter addresses the strengths and weaknesses of the methodology and concludes with suggestions for further reading. This systematic, state-of-the-art survey is ideal for both novice researchers and professionals interested in extending their methodological repertoires. The book also has a companion website which provides readers with further information, links, resources, demonstrations, exercises and case studies related to each chapter.

Climate change is one of the inescapable themes of current times. Climate change confronts society in issues as diverse as domestic and international political debate and negotiation, discussion in the media and public opinion, land management choices and decisions, and concerns about environmental, social and economic priorities now and for the future. Climate change also spans spatial, temporal and organisational scales, and has strong links with nature-society relationships, environmental dynamics, and vulnerability. Understanding the full range of possible consequences of climate change is essential for informed decision making and debate. This book provides a collection of chapters that span environmental, social and economic aspects of climate change. Together the chapters provide a diverse and contrasting series that highlights the need to

analyze, review and debate climate change and its possible impacts and consequences from multiple perspectives. The book also is intended to promote discussion and debate of a more integrated, inclusive and open approach to climate change and demonstrates the value of geography in addressing climate change issues. This book was originally published as a special issue of *Annals of the Association of American Geographers*.

The New York Times bestseller that gives readers a paradigm-shattering new way to think about motivation from the author of *When: The Scientific Secrets of Perfect Timing* Most people believe that the best way to motivate is with rewards like money—the carrot-and-stick approach. That's a mistake, says Daniel H. Pink (author of *To Sell Is Human: The Surprising Truth About Motivating Others*). In this provocative and persuasive new book, he asserts that the secret to high performance and satisfaction—at work, at school, and at home—is the deeply human need to direct our own lives, to learn and create new things, and to do better by ourselves and our world. Drawing on four decades of scientific research on human motivation, Pink exposes the mismatch between what science knows and what business does—and how that affects every aspect of life. He examines the three elements of true motivation—autonomy, mastery, and purpose—and offers smart and surprising techniques for putting these into action in a unique book that will change how we think and transform how we live.

A riveting true-life tale of newspaper noir and Japanese organized crime from an American investigative journalist who "pulls the curtain back on ... [an] element of Japanese society that few Westerners ever see" (San Francisco Examiner). Now a Max Original Series on HBO Max Jake Adelstein is the only American journalist ever to have been admitted to the insular Tokyo Metropolitan Police Press Club, where for twelve years he covered the dark side of Japan: extortion, murder, human trafficking, fiscal corruption, and of course, the yakuza. But when his final scoop exposed a scandal that reverberated all the way from the neon soaked streets of Tokyo to the polished Halls of the FBI and resulted in a death threat for him and his family, Adelstein decided to step down. Then, he fought back. In Tokyo Vice he delivers an unprecedented look at Japanese culture and searing memoir about his rise from cub reporter to seasoned journalist with a price on his head.

The exponential growth of clinical psychology since the late 1960s can be measured in part by the extensive literature on the subject. The field has come to be defined as much by its many topics as its many voices. The Oxford Handbook of Clinical Psychology synthesizes these decades of literature in one volume. In addition to core sections on topics such as training, assessment, diagnosis, and intervention, the handbook includes chapters devoted to emerging issues in the clinical field, including health care reforms, cultural factors, and technological innovations and challenges. Each chapter offers a review of the most pertinent literature, outlining issues and identifying possibilities for future research.

3D imaging sensors have been investigated for several decades. Recently, - provements on classical approaches such as stereo vision and structured light on the one hand, and novel time-of-flight (ToF) techniques on the other hand have emerged, leading to 3D vision systems with radically improved character- tics. Presently, these techniques make full-range 3D data available at interactive frame rates, and thus open the path toward a much broader application of 3D vision systems. The workshop on Dynamic 3D Vision (Dyn3D) was held in conjunction with the annual conference of the German Association of Pattern Recognition (DAGM) in Jena on September 9, 2009. Previous workshops in this series have focused on the same topic, i.e., the Dynamic 3D Vision workshop in conjunction with the DAGM conference in 2007 and the CVPR workshop Time of Flight Camera-Based Computer Vision (TOF-CV) in 2008. The goal of this year's workshop, as for the prior events, was to constitute a platform for researchers working in the ?eld of real-time range imaging, where all aspects, from sensor evaluation to application scenarios, are addressed. After a very competitive and high-quality reviewing process, 13 papers were accepted for publication in this LNCS issue. The research area on dynamic 3D vision proved to be extremely lively. Again, as for prior workshops on this ?eld,

numerous new insights and novel approaches on time-of-?ight sensors, on re- time mono- and multidimensional data processing and on various applications are presented in these workshop proceedings.

ICSR is the premier international conference in the ?eld of software reuse. The main goal of ICSR is to present the advances and improvements within the software reuse domain, as well as to promote interaction between researchers and practitioners. The 11th International Conference on Software Reuse (ICSR 2009) was held during September 27-30, 2009 in Falls Church, VA, USA. 2009 was the year that ICSR went back to its roots. The theme was "Formal Foundations of Reuse and Domain Engineering." We explored the theory and formal foundations that underlie current reuse and domain engineering practice and looked at current advancements to get an idea of where the ?eld of reuse was headed. Many of the papers in these proceedings directly re?ect that theme. The following workshops were held in conjunction with ICSR 2009: - Second Workshop on Knowledge Reuse (KREUSE 2009) - RESOLVE 2009: Software Veri?cation - the Cornerstone of Reuse - First International Workshop on Software Ecosystems - International Workshop on Software Reuse and Safety (RESAFE 2009) Aside from these workshops and the papers found here, the conference also included ?ve tutorials, eight tool demos, and a doctoral symposium. Links to all of this information and more can be found at the ICSR 11 conference website at icsr11.isase.org.

Scores of talented and dedicated people serve the forensic science community, performing vitally important work. However, they are often constrained by lack of adequate resources, sound policies, and national support. It is clear that change and advancements, both systematic and scientific, are needed in a number of forensic science disciplines to ensure the reliability of work, establish enforceable standards, and promote best practices with consistent application.

Strengthening Forensic Science in the United States: A Path Forward provides a detailed plan for addressing these needs and suggests the creation of a new government entity, the National Institute of Forensic Science, to establish and enforce standards within the forensic science community. The benefits of improving and regulating the forensic science disciplines are clear: assisting law enforcement officials, enhancing homeland security, and reducing the risk of wrongful conviction and exoneration. Strengthening Forensic Science in the United States gives a full account of what is needed to advance the forensic science disciplines, including upgrading of systems and organizational structures, better

training, widespread adoption of uniform and enforceable best practices, and mandatory certification and accreditation programs. While this book provides an essential call-to-action for congress and policy makers, it also serves as a vital tool for law enforcement agencies, criminal prosecutors and attorneys, and forensic science educators.

This book explores the view that normative behaviour is part of a complex of social mechanisms, processes and narratives that are constantly shifting. From this perspective, norms are not a kind of self-contained social object or fact, but rather an interplay of many things that we label as norms when we 'take a snapshot' of them at a particular instant. Further, this book pursues the hypothesis that considering the dynamic aspects of these phenomena sheds new light on them. The sort of issues that this perspective opens to exploration include: Of what is this complex we call a "social norm" composed of? How do new social norms emerge and what kind of circumstances might facilitate such an appearance? How context-specific are the norms and patterns of normative behaviour that arise? How do the cognitive and the social aspects of norms interact over time? How do expectations, beliefs and individual rationality interact with social norm complexes to effect behaviour? How does our social embeddedness relate to social constraint upon behaviour? How might the socio-cognitive complexes that we call norms be usefully researched?

Pam always said that it would take an act of congress to get her to go back home to Mercy, Georgia, but all that's really called for is the death of her twin sister, Paris. Suddenly she's eating her words and sneaking back into town like a thief in the night, trying to lay low and not draw too much attention to herself. When she left Mercy, she was an orphan with a wild and loose reputation that had as much truth to it as it did falsehood. Fast-forward eighteen years, and Pam is a celebrity recording artist with money to burn and a reputation for being curiously reclusive. Nothing about Mercy's quiet, tree-lined streets and old-fashioned way of life welcomes

Pam home. Like most small towns, Mercy seems like a safe place to live, but Pam knows different. It isn't just the little town she grew up in; it's the place where she lived her worst nightmare. Things have changed, but then again, they've remained the same, and the longer Pam stays in Mercy, the faster things spin out of control. The people she calls friends turn out to be her worst enemies, the people she considers family turn out to be wolves in sheep's clothing, and the truth about the life she lives is exposed for the lie that it really is. Everyone wants to know why Pam ran from Mercy, and they're about to find out.
