Where Is the Church? Martyrdom, Persecution, and Baptism in North Africa is an overview of North African Christianity from the second to the fifth century. Beginning with the African martyrs, Ronald D. Burris investigates the idea of how "church" was defined in North African Christianity through the understanding of water baptism, martyrdom (baptism in blood), and key theological concepts such as origo or conscientia. In addition to baptism and ecclesiology, this work investigates the social, political, and economic issues that were germane to the shaping, hardening, and eventual condemnation of those beliefs as expressed by the North African Christians, called the Donatists. Morevoer, this work seeks to explain why so many North African Christians were drawn to that group. They were drawn to the Donatists because the

latter more closely represented the tradition of the early African martyrs, Tertullian, and their beloved hero and martyr, Saint Cyprian.

The Indian Listener (fortnightly programme journal of AIR in English) published by The Indian State Broadcasting Service, Bombay, started on 22 December, 1935 and was the successor to the Indian Radio Times in english, which was published beginning in July 16 of 1927. From 22 August, 1937 onwards, it was published by All India Radio, New Delhi. In 1950, it was turned into a weekly journal. Later, The Indian listener became "Akashvani" in January 5, 1958. It was made a fortnightly again on July 1, 1983. It used to serve the listener as a bradshaw of broadcasting, and give listener the useful information in an interesting manner about programmes, who

The divisions in the Corinthian church are catalogued by Paul in 1 Corinthians 1:12: "Each of you says, 'I follow Paul,' or 'I follow Apollos,' or 'I follow Cephas,' or 'I follow Christ.' " White shows how these splits are found in the milieu of 1st-century Graeco-Roman education. By consulting relevant literary and epigraphic evidence, White develops a picture of ancient education throughout the Empire generally, and in Roman Corinth specifically. This serves as a backdrop to the situation in the Christian community, wherein some of the elite, educated members preferred Apollos to Paul as a teacher since Apollos more closely resembled other teachers of higher studies. White takes a new and different direction to other studies in the field, arguing that it is against the values inculcated through "higher education" in general that the teachers are being compared. By starting with this broader category, one that much better reflects the very eclectic nature of Graeco-Roman education, a sustained reading of 1 Corinthians 1 – 4 is made possible.

will help you walk into your oral exam with confidence. This study guide covers all of the CRJ 700 systems in an efficient question/answer format. Reading and reviewing systems information in a manual doesn't necessarily challenge a pilot's knowledge of the aircraft. Reading a question and trying to answer it from memory is much more challenging and provides positive feedback. STOP going through your systems manual trying to figure out what you know and what you don't know. After going through this study guide a few times, you will easily organize what you know and what you don't know on the CRJ 700. This kind of organization will make it much easier and faster to study for your next CRJ checkride. Need a better way to study for a CRJ training event? Try the Aviation Study Made Easy System. Over 1,200 questions with answers The average time to go through a system chapter in our book, after organizing the information, is 15 minutes Easy to quiz yourself 100% of your study time will be spent on information you don't know Easily organize all of the systems information for future training events Build your confidence Whether you are studying for an initial training event or recurrent training, this book will help you prepare efficiently.

Mathematical gauge theory studies connections on principal bundles, or, more precisely, the solution spaces of certain partial differential equations for such connections. Historically, these equations have come from mathematical physics, and play an important role in the description of the electro-weak and strong nuclear forces. The use of gauge theory as a tool for studying topological properties of four-manifolds was pioneered by the fundamental work of Simon Donaldson in the early 1980s, and was revolutionized by the introduction of the Seiberg-Witten equations in the mid-1990s. Since the birth of the subject, it has retained its close connection with symplectic topology. The analogy between these two fields of study was further underscored by Andreas Floer's construction of an infinite-dimensional variant of Morse theory that applies in two a priori different contexts: either to define symplectic invariants for pairs of Lagrangian submanifolds of a symplectic manifold, or to define topological

Linguistic Geometry: From Search to Construction is the first book of its kind. Linguistic Geometry (LG) is an approach to the construction of mathematical models for large-scale multi-agent systems. A number of such systems, including air/space combat, robotic manufacturing, software re-engineering

and Internet cyberwar, can be modeled as abstract board games. These are games with moves that can be represented by the movement of abstract pieces over locations on an abstract board. The purpose of LG is to provide strategies to guide the games' participants to their goals. Traditionally, discovering such strategies required searches in giant game trees. These searches are often beyond the capacity of modern and even conceivable future computers. LG dramatically reduces the size of the search trees, making the problems computationally tractable. LG provides a formalization and abstraction of search heuristics used by advanced experts including chess grandmasters. Essentially, these heuristics replace search with the construction of strategies. To formalize the heuristics, LG employs the theory of formal languages (i.e. formal linguistics), as well as certain geometric structures over an abstract board. The new formal strategies solve problems from different domains far beyond the areas envisioned by the experts. For a number of these domains, Linguistic Geometry yields optimal solutions.
