Examples of network protocol are http, ftp and mailto. The host name is also sometimes called the web address. URLs are written according to this syntax: protocol://host/location. The protocol's function is to specify how the URL connects. For example, mailto:// calls an e-mail client in order to communicate that way.

Which of the following is an example of a 'call to action' ...

For example, a thick piece of matter will conduct better than a thin piece of the same size and length. If you have two pieces of a material of the same thickness but one is shorter than the other, the shorter one will conduct better because the shorter piece has less resistance, in much the same way that it's easier to force water through a short pipe than a long one.
