Seed Soaring | Games | Nature Cat | PBS KIDS

The nature of this material is used in both describing and classifying seeds, in addition to the embryo to endosperm size ratio. The endosperm may be considered to be farinaceous (or mealy) in which the cells are filled with starch, as for instance cereal grains, or not (non-farinaceous).

We are the nurture to our nature. We're Seed—an ecosystem of kindred scientists, doctors, innovators, entrepreneurs, and translational storytellers from around the world. We collectively believe in the potential of the microbiome to improve human and planetary health.

Seeds for Nature - Irish Biod Conf Mother Nature is brilliant, and knows exactly when the seed is ready to start growing; if the time hasn't arrived, it withholds its development during seed dormancy. A seed is formed by the flower of the plant during sexual reproduction, but let's find out what happens after that!

*Seed - Wikipedia*

Seeds should be planted promptly after stratification. Stratification mimics natural processes that weaken the seed coat before germination. In nature, some seeds require particular conditions to germinate, such as the heat of a fire (e.g., many Australian native plants), or soaking in a body of water for a long period of time.
