Since the Enlightenment, alchemy has been viewed as a sort of antiscience, disparaged by many historians as a form of lunacy that impeded the development of rational

chemistry. But in *Atoms and Alchemy*, William R. Newman—a historian widely credited for reviving recent interest in alchemy—exposes the speciousness of these views and challenges widely held beliefs about the origins of the Scientific Revolution. Tracing the alchemical roots of Robert Boyle's famous mechanical philosophy, Newman shows that alchemy contributed to the mechanization of nature, a movement that lay at the very heart of scientific discovery.

Boyle and his predecessors—figures like the mysterious medieval Geber or the Lutheran professor Daniel Sennert—provided convincing experimental proof that matter is made up of enduring particles at the microlevel. At the same time, Newman argues that alchemists created the operational criterion of an “atomic” element as the last point of analysis, thereby contributing a key feature to the development of later chemistry. *Atoms and Alchemy* thus provokes a refreshing debate about the origins of modern science and will be welcomed—and deliberated—by all who are interested in the development of scientific theory and practice.

This volume highlights the latest advances, innovations, and applications in bituminous materials and structures and asphalt pavement technology, as presented by leading international researchers and engineers at the RILEM International Symposium on Bituminous Materials (ISBM), held in Lyon, France on December 14-16, 2020. The symposium represents a joint effort of three RILEM Technical Committees from Cluster F: 264-RAP “Asphalt Pavement Recycling”, 272-PIM “Phase and Interphase Behaviour of Bituminous Materials”, and 278-CHA “Crack-Healing of Asphalt Pavement Materials”. It covers a diverse range of topics concerning bituminous materials (bitumen, mastics, mixtures) and road, railway and airport pavement structures, including: recycling, phase and interphase behaviour, cracking and healing, modification and innovative materials, durability and environmental aspects, testing and modelling, multi-scale properties, surface characteristics, structure performance, modelling and

design, non-destructive testing, back-analysis, and Life Cycle Assessment. The contributions, which were selected by means of a rigorous international peer-review process, present a wealth of exciting ideas that will open novel research directions and foster new multidisciplinary collaborations.

“The working hypothesis is this: it is true that sexuality as experience is obviously not independent of codes and systems of prohibitions, but it needs to be recalled straightaway that these codes are astonishingly stable, continuous, and slow to change. It needs to be recalled also that the way in which they are observed or transgressed also seems to be very stable and very repetitive. On the other hand, the point of historical mobility, what no doubt change most often, what are most fragile, are modalities of experience.” - Michel Foucault

In 1981 Foucault delivered a course of lectures which marked a decisive reorientation in his thought and of the project of a History of Sexuality outlined in 1976. It was in these lectures that arts of living became the focal point around which he developed a new way of thinking about subjectivity. It was also the moment when Foucault problematized a conception of ethics understood as the patient elaboration of a relationship of

self to self. It was the study of the sexual experience of the Ancients that made these new conceptual developments possible. Within this framework, Foucault examined medical writings, tracts on marriage, the philosophy of love, or the prognostic value of erotic dreams, for evidence of a structuration of the subject in his relationship to pleasures (aphrodisia) which is prior to the modern construction of a science of sexuality as well as to the Christian fearful obsession with the flesh. What was actually at stake was establishing that the imposition of a scrupulous and interminable hermeneutics of desire was the invention of Christianity. But to do this it was necessary to establish the irreducible specificity of ancient techniques of self. In these lectures, which clearly foreshadow *The Use of Pleasures* and *The Care of Self*, Foucault examines the Greek subordination of gender differences to the primacy of an opposition between active and passive, as well as the development by Imperial stoicism of a model of the conjugal bond which advocates unwavering fidelity and shared feelings and which leads to the disqualification of homosexuality.
