## **Indoor Air Pollution** Houghton Mifflin Harcourt

This book critically examines the representational politics of women in post-millennial Afghanistan, Pakistan, and Iran across a range of literary, visual, and digital media. Introducing the conceptual model of remediated witnessing, the book contemplates the ways in which meaning is constructed, deconstructed, and reconstructed as a consequence of its (re)production and (re)distribution. In what ways is information re framed? The chapters in this book therefore analyse the reiterative processes via which Afghan, Pakistani, and Iranian women are represented in a range of contemporary media. By considering how Muslim women have been exploited as part of neo-imperial, state, and patriarchal discourses, the book charts possible—and unexpected—routes via which Muslim women might enact resistance. What is more, it asks the reader to consider how they, themselves, embody the role of witness to these resistant subjectivities, and how they might do so responsibly, with empathy and accountability.

Building Systems for interior designers Second Edition Corky Binggeli, asid The updated guide to technical building systems for interior designers As integral members of the building design team, interior designers share an increasingly complex and crucial role. Now revised in its second edition, Building Systems for Interior Designers remains the one go-to resource that addresses the special concerns of the interior designer within the broader context of the rest of the building design team. Building Systems for Interior Designers, Second Edition explains technical building systems and engineering issues in a clear and accessible way to interior designers. Covering systems from HVAC to water

and waste to lighting, transportation, and safety, author Corky Binggeli enables interior designers to communicate more effectively with architects, engineers, and contractors; collaborate effectively on projects; and contribute to more accurate solutions for a broad range of building considerations. Among the many improvements in the Second Edition are: A deeper engagement with sustainable building design, giving the interior designer the resources needed to participate as part of a sustainable design team A reshaped structure that enhances the reader's understanding of the material Many more illustrations and explanatory captions With a host of features to make the book more up to date, easier to use, and more effective as an instructive guide, Building Systems for Interior Designers, Second Edition is a valuable book for students as well as a practical desktop reference for professionals.

This book is one of the first wide-ranging academic surveys of the major types and categories of Hindu contemplative praxis. It explores diverse spiritual and religious practices within the Hindu traditions and Indic hermeneutical perspectives to understand the intricate culture of meditative communion and contemplation, devotion, spiritual formation, prayer, ritual, and worship. The volume extends and expands the conceptual reach of the fields of Contemplative Studies and Hindu Studies. The chapters in the volume cover themes in Hindu contemplative experience from various texts and traditions including classical S khya and Patañjali Yoga, the Bh gavatā Pur ā, the role of S dhana in Advaita Ved ānta, r vidyā and the r cakra, the body in Tantra, the semiotics and illocution of Gau āya Vai āva s dhana, mantra in M ān s , Vai āva liturgy, as well as cross-cultural reflections and interreligious comparative contemplative praxis. The volume presents indigenous vocabulary and frameworks to examine categories and concerns particular to the Hindu contemplative traditions. It traces patterns that cut across Hindu traditions and systems and discusses contrasting methods of different theological/philosophical schools evincing a strong plurality in Hindu religious thought and practice. The volume provides intra-religious comparisons that reveal internal complexity, nuances, and a variety of contemplative states and transformative practices that exist under the rubric of Hindu practices of interiority and reflection. With key insights on forms and functions of the contemplative experience along with their theologies and philosophies, the volume suggests new hermeneutical directions that will advance the field of contemplative studies. This book will be useful to scholars and researchers of religious and theological studies, contemplative studies, Hindu studies, consciousness studies, yoga studies, Indian philosophy and religion, sociology of religion, philosophy of religion, comparative religion, and South Asian studies, as well as general readers interested in the topic.

## **Mothballing Historic Buildings**

People's desire to understand the environments in which they live is a natural one. People spend most of their time in spaces and structures designed, built, and managed by humans, and it is estimated that people in developed countries now spend 90 percent of their lives indoors. As people move from homes to workplaces, traveling in cars and on transit

systems, microorganisms are continually with and around them. The human-associated microbes that are shed, along with the human behaviors that affect their transport and removal, make significant contributions to the diversity of the indoor microbiome. The characteristics of "healthy" indoor environments cannot yet be defined, nor do microbial, clinical, and building researchers yet understand how to modify features of indoor environments — such as building ventilation systems and the chemistry of building materials — in ways that would have predictable impacts on microbial communities to promote health and prevent disease. The factors that affect the environments within buildings, the ways in which building characteristics influence the composition and function of indoor microbial communities, and the ways in which these microbial communities relate to human health and well-being are extraordinarily complex and can be explored only as a dynamic, interconnected ecosystem by engaging the fields of microbial biology and ecology, chemistry, building science, and human physiology. This report reviews what is known about the intersection of these disciplines, and how new tools may facilitate advances in understanding the ecosystem of built environments, indoor microbiomes, and effects on human health and well-being. It offers a research agenda to generate the information needed so that stakeholders with an interest in understanding the impacts of built environments will be able to make more informed decisions.
