NEW YORK TIMES BESTSELLER • “ A fascinating look at how consumers perceive logos, ads, commercials, brands, and products. ” —Time How much do we know about why we buy? What truly influences our decisions in today ’ s message-cluttered world? In Buyology, Martin Lindstrom presents the astonishing findings from his groundbreaking three-year, seven-million-dollar neuromarketing study—a cutting-edge experiment that peered inside the brains of 2,000 volunteers from all around the world as they encountered various ads, logos, commercials, brands, and products. His startling results shatter much of what we have long believed about what captures our interest—and drives us to buy. Among the questions he explores: • Does sex actually sell? • Does subliminal advertising still surround us? • Can “ cool ” brands trigger our mating instincts? • Can our other senses—smell, touch, and sound—be aroused when we see a product? Buyology is a fascinating and shocking journey into the mind of today's consumer that will captivate anyone who's been seduced—or turned off—by marketers' relentless attempts to win our loyalty, our money, and our minds.

"The wide range of topics covered as well as detailed insight make Retail Store Planning & Design Manual a welcome teacher--or reminder--for anyone concerned with the industry." --Visual Merchandising and Store Design on the First Edition Now one of the nation's most respected and sought-after retail store design specialists tells you what he knows about the art and science of retail planning, design, and remodeling. An indispensable tool of the trade that no practicing designer will want to be without, it supplies you with: More than 370 professional diagrams and illustrations of store layouts and design elements 120 forms to help you more efficiently manage all phases of planning, budgeting, scheduling, and construction Innovative lighting design techniques and color schemes that promote sales Practical guidelines on every aspect of managing a successful retail store design firm Special chapters on budgeting, cost control, and planning for maximum ROI In-depth coverage of the state-of-the-art CAD technology for store planning and design And much more Retail store design is one of today's most challenging and rewarding interior design specialties. Creating a total store environment that is beautiful, practical, and profitable and that reflects the client's vision of the store and its position in the marketplace requires an assortment of talents. The successful store planner must combine imagination, business sense, and an understanding of buyer psychology with a thorough knowledge of materials and current design and construction trends. This comprehensive, nuts-and-bolts guide to virtually every aspect of store planning and design was written by one of North America's most accomplished retail store designers and design educators. Michael J. Lopez shares with you the fruits of his 30 years of experience in planning, designing, and remodeling retail establishments--both large and small. Here are just a few of the outstanding features that make Retail Store Planning & Design Manual, Second Edition an indispensable working resource for practicing designers and an excellent learning tool for design students: More than 370 professional diagrams and illustrations of store layouts and design elements, including merchandising presentation systems and techniques, free-standing fixtures, hardware and accessories, display racks, column treatments, fitting rooms, decor sections, and much more 120 standard and original forms that you can use to help you more efficiently manage all phases of planning, budgeting, scheduling, and construction

New chapters offering in-depth coverage of retail store lighting, budgeting, planning for maximum ROI, and the role of computer-aided design in store planning A gold mine of expert tips and guidelines on managing a successful retail design firm--from bidding and contract negotiations, the client/planner relationship, and marketing your services, to budgeting and cost control, project scheduling, bookkeeping, insurance, and more 18 appendixes on special store design topics, written by leading store designers and planners and store planning professors Retail Store Planning & Design Manual, Second Edition is sure to become the most frequently consulted resource in your working library.

The Firmware Handbook provides a comprehensive reference for firmware developers looking to increase their skills and productivity. It addresses each critical step of the development process in detail, including how to optimize hardware design for better firmware. Topics covered include real-time issues, interrupts and ISRs, memory management (including Flash memory), handling both digital and analog peripherals, communications interfacing, math subroutines, error handling, design tools, and troubleshooting and debugging. This book is not for the beginner, but rather is an in-depth, comprehensive one-volume reference that addresses all the major issues in firmware design and development, including the pertinent hardware issues. Included CD-Rom contains all the source code used in the design examples, so engineers can easily use it in their own designs

Implement machine learning and deep learning methodologies to build smart, cognitive AI projects using Python Key FeaturesA go-to guide to help you master AI algorithms and concepts8 real-world projects tackling different challenges in healthcare, e-commerce, and surveillanceUse TensorFlow, Keras, and other Python libraries to implement smart AI applicationsBook Description This book will be a perfect companion if you want to build

insightful projects from leading AI domains using Python. The book covers detailed implementation of projects from all the core disciplines of AI. We start by covering the basics of how to create smart systems using machine learning and deep learning techniques. You will assimilate various neural network architectures such as CNN, RNN, LSTM, to solve critical new world challenges. You will learn to train a model to detect diabetic retinopathy conditions in the human eye and create an intelligent system for performing a video-to-text translation. You will use the transfer learning technique in the healthcare domain and implement style transfer using GANs. Later you will learn to build AI-based recommendation systems, a mobile app for sentiment analysis and a powerful chatbot for carrying customer services. You will implement AI techniques in the cybersecurity domain to generate Captchas. Later you will train and build autonomous vehicles to self-drive using reinforcement learning. You will be using libraries from the Python ecosystem such as TensorFlow, Keras and more to bring the core aspects of machine learning, deep learning, and AI. By the end of this book, you will be skilled to build your own smart models for tackling any kind of AI problems without any hassle. What you will learnBuild an intelligent machine translation system using seq-2-seq neural translation machinesCreate AI applications using GAN and deploy smart mobile apps using TensorFlowTranslate videos into text using CNN and RNNImplement smart AI Chatbots, and integrate and extend them in several domainsCreate smart reinforcement, learning-based applications using Q-LearningBreak and generate CAPTCHA using Deep Learning and Adversarial Learning Who this book is for This book is intended for data scientists, machine learning professionals, and deep learning practitioners who are ready to extend their knowledge and potential in AI. If you want to build real-life smart systems to play a crucial role in every complex domain, then this book is what you need. Knowledge of Python programming and a familiarity with basic machine learning and deep learning concepts are expected to help you get the most out of the book

Numerical procedures based on the 2-D and 3-D full potential equations and the 2-D Navier-Stokes equations were developed to study the effects of leading and trailing edge flap motions on the aerodynamics of parallel airfoil-vortex interactions and on the aerodynamics and acoustics of the more general self-generated rotor blade vortex interactions (BVI). For subcritical interactions, the 2-D results indicate that the trailing edge flap can be used to alleviate the impulsive loads experienced by the airfoil. For supercritical interactions, the results show the necessity of using a leading edge flap, rather than a trailing edge flap, to alleviate the interaction. Results for various time dependent flap motions and their effect on the predicted temporal sectional loads, differential pressures, and the free vortex trajectories are presented. For the OLS model rotor, contours of a BVI noise metric were used to quantify the effects of the trailing edge flap on the size and directivity of the high/low intensity noise region(s). Average reductions in the BVI noise levels on the order of 5 dB with moderate power penalties on the order of 18 pct. for a four bladed rotor and 58 pct. for a two bladed rotor were obtained. Electronics for Service Engineers is the first text designed specifically for the Level 2 NVQs in Electronics Servicing. It provides the underpinning knowledge required by brown goods and white goods students, reflecting the popularity of the EMTA white goods NVQs. It has also been written in the light of the new EEB / City & Guilds Level 2 progression award (RVQ) for brown goods and commercial electronics, dubbed 'son of 2240', and the existing 2240 part 1. The wide ranging experience of the authors makes this a readable book with much relevance to the real-life challenges of the service engineer. From simple mathematics and circuit theory to transmission theory and aerials, from health and safety to logic gates and transducers, the complete range of knowledge required to service electronic and electrical equipment is here. This practical emphasis makes the book ideal for existing service engineers seeking to gain an NVQ. Numerous questions and worked examples throughout the text allow readers to monitor their own progress, and provide practice for C&G tests. Joe Cieszynski and Dave Fox have a wide mix of experience, both in the field and workshop working on TV and audio, and teaching electronic servicing and security installation at MANCAT. Joe writes regularly for Television magazine.

This book is about abduction, 'the logic of Sherlock Holmes', and about how some kinds of abductive reasoning can be programmed in a computer. The work brings together Artificial Intelligence and philosophy of science and is rich with implications for other areas such as, psychology, medical informatics, and linguistics. It also has subtle implications for evidence evaluation in areas such as accident investigation, confirmation of scientific theories, law, diagnosis, and financial auditing. The book is about certainty and the logico-computational foundations of knowledge; it is about inference in perception, reasoning strategies, and building expert systems.
