This book explores the intersection of public policy and the fast changing digital media economy. Over the last 20 years, digital technologies and digital content have revolutionized many aspects of social, economic and political life around the world. Governments, locked into the policies and programs of the traditional economy, are struggling to respond to this dynamic and commercially unique global ecosystem. This study examines the nature and extent of the digital economy, looking at both the commercial diversity within the sector and the different digital implementations across the world. While the digital engagement of North America is well known, the scale and intensity of digital growth in East Asia is not fully understood not are the transformative changes occurring in parts of Africa. The digital world is marked by the unexpected and rapid re-orientation of economic, social, cultural and political affairs. The digitization of work, for example, has already brought major disruptions within national economies. Governments are struggling to respond, in part because of pressures from the traditional industrial and resource sectors but also because of the unique, somewhat anarchistic nature of the digital content industry. The Global Digital Economy provides a profile of the global digital environment, reviews current government digital policies (with an emphasis on innovative strategies), and offers policy suggestions for national and subnational governments. Countries that respond creatively to the digital economy--like Taiwan, South Korea, Finland and Israel--stand to prosper from the anticipated accelerated growth of the sector. Those nations that struggle to keep pace with the digital infrastructure needs of the new economy and with the potential for employment and business creation stand to fall behind economically. This book provides a policy roadmap for the digital economy and identifies the risks and opportunities of this core sector in the twenty-first-century economy.

Global Health Watch (GHW), now in its sixth edition, provides the definitive voice for an alternative discourse on health. It integrates rigorous analysis, alternative proposals and stories of struggles and change to present a compelling case for the imperative to work for a radical transformation of the way we approach actions and policies on health. It was conceived in 2003 as a

collaborative effort by activists and academics from across the world, and is designed to question present policies on health and to propose alternatives. Global Health Watch 6 (GHW6) has been coordinated by eight civil society organizations – the People's Health Movement, ALAMES, Health Poverty Action, Medico International, Third World Network, Medact, Sama and Viva Salud. With contributions from across the globe, GHW6 addresses key issues related to health systems and the range of social, economic, political and environmental determinants of health, locating decisions and choices that impact on health in the structure of global power relations and economic governance.

This book examines central aspects of the new technologies and the legal questions raised by them from both an international and an inter-disciplinary perspective. The technology revolution and the global networking of IT systems pose enormous challenges for the law. Current areas of discussion relate to autonomous systems, big data and issues surrounding legal tech. Ensuring data protection and IT security as well as the creation of a legal framework for the new technology as a whole can only be achieved through international and inter-disciplinary co-operation. The team of authors is made up of experienced, internationally renowned experts as well as young researchers and professionals who give valuable insights from numerous different jurisdictions. This book is written for jurists and those responsible for technology in public authorities and companies as well as practising lawyers and researchers.

Understanding the New Global Economy: A European Perspective argues that globalisation is facing economic and political headwinds. A new global economic geography is emerging, cross-border relationships are changing, and global governance structures must come to terms with a new multipolar world. This book clarifies the fundamental questions and trade-offs in this new global economy, and gives readers the tools to understand contemporary debates. It presents a range of possible policy options, without being prescriptive. Following a modular structure, each chapter takes a similar approach but can also be read as a stand-alone piece. State-of-the-art academic research and historical experiences are weaved throughout the book, and readers are pointed towards relevant sources of information. This text is an

accessible guide to the contemporary world economy, suited to students of international economics, political economy, globalisation, and European studies. It will also be valuable reading for researchers, professionals, and general readers interested in economics, politics, and civil society.

Organization and Leadership in Disruptive Times Harvard Business Press

This book is a substantial re-write of the author's earlier book on management consultancy that has established itself as a leading book on this topic. This re-write focuses upon the analysis of the impact of e-business on the consulting industry as well as examining the changing structure of the industry and emerging segmentation. It also includes recent material on the efforts of consulting firms to manage knowledge more effectively and includes new and more examples and interviews.

Facing Global Digital Revolution Springer Nature

This is the first book-length treatment of the advancement of EU global data flows and digital trade through the framework of European institutionalisation. Drawing on case studies of EU-US, EU-Japan and EU-China relations it charts the theoretical and empirical approaches at play. It illustrates how the EU has pioneered high standards in data flows and how it engages in significant digital trade reforms, committed to those standards. The book marks a major shift in how institutionalisation and the EU should be viewed as it relates to two of the more extraordinary areas of global governance: trade and data flows. This significant book will be of interest to EU constitutional lawyers, as well as those researching in the field of IT and data law.

The Industrial Revolution 4.0 describes the exponential changes to the way we live, work, and relate to one another due to the adoption of cyber-physical systems, the Internet of Things, and the Internet of Systems. This revolution is expected to impact all disciplines, industries, business, and economics. Therefore, the main goal of the conference was to provide recent research related development of digital technology to the business, economics, management, and accounting field. These proceedings consist of selected papers, accepted after a rigid review process covering several issues in strategic decision making, management, accounting, policy studies, knowledge management, innovation management, applied economics, econometrics, capital market, and marketing & sales management. It will provide details beyond what is possible to be included in an oral presentation and constitute a concise but timely medium for the dissemination of recent research results. BES Conference Proceedings 2019 will be invaluable to professionals and academics in business, management, accounting, and economics for a good understanding of the developments towards industrial revolution 4.0.

The Global Digital Economy: A Comparative Policy Analysis Harvard Business Press

This book is reflective of a science-based vision of the future development paradigm of economic and social systems. It deals with the digitization as the technological basis for the future development of economic and social systems and presents a review of groundbreaking technologies and prospects for their application. The specific character of the industry and prospects for the application of digital technologies in business are analyzed. A rationale is provided for future prospects for the sustainable development of economic and social systems in a digital economy. The authors determine the process of the formation and development of the information-oriented society, social and educational aspects of the digitization, as well as the institutional framework of the digital future of social and economic systems. The book combines the best works following the results of the 12th International Research-to-Practice Conference “ Artificial Intelligence: Anthropogenic Nature vs.

Social Origin ” that was held by the Institute of Scientific Communications (ISC) in cooperation with the Siberian Federal University and the Krasnoyarsk Regional Fund of support of scientific and scientific – technical activities on 5 – 7 December 2019, in Krasnoyarsk, Russia, as well as following the results of the 3rd International Research-to-Practice Conference “ Economic and Social Systems: Paradigms for the Future ” that was held by the ISC in cooperation with the Pyatigorsk State University on 5 – 6 February 2020. The target audience of the book consists of representatives of the academic community concerned with the future prospects for the development of economic and social systems, as well as economic agents engaged in the digitization of business processes, and representatives of public agencies regulating the development of business systems for their progressivity, sustainability and competitiveness.

Digital transformation is not about technology--it's about change. In the rapidly changing digital economy, you can't succeed by merely tweaking management practices that led to past success. And yet, while many leaders and managers recognize the threat from digital--and the potential opportunity--they lack a common language and compelling framework to help them assess it and guide them in responding. They don't know how to think about their digital business model. In this concise, practical book, MIT digital research leaders Peter Weill and Stephanie Woerner provide a powerful yet straightforward framework that has been field-tested globally with dozens of senior management teams. Based on years of study at the MIT Center for Information Systems Research (CISR), the authors find that digitization is moving companies' business models on two dimensions: from value chains to digital ecosystems, and from a fuzzy understanding of the needs of end customers to a sharper one. Looking at these dimensions in combination results in four distinct

business models, each with different capabilities. The book then sets out six driving questions, in separate chapters, that help managers and executives clarify where they are currently in an increasingly digital business landscape and highlight what's needed to move toward a higher-value digital business model. Filled with straightforward self-assessments, motivating examples, and sharp financial analyses of where profits are made, this smart book will help you tackle the threats, leverage the opportunities, and create winning digital strategies.

The hope and hype about African digital entrepreneurship, contrasted with the reality on the ground in local ecosystems. In recent years, Africa has seen a digital entrepreneurship boom, with hundreds of millions of dollars poured into tech cities, entrepreneurship trainings, coworking spaces, innovation prizes, and investment funds. Politicians and technologists have offered Silicon Valley-influenced narratives of boundless opportunity and exponential growth, in which internet-enabled entrepreneurship allows Africa to "leapfrog" developmental stages to take a leading role in the digital revolution. This book contrasts these aspirations with empirical research about what is actually happening on the ground. The authors find that although the digital revolution has empowered local entrepreneurs, it does not untether local economies from the continent's structural legacies.
