The hope and hype about African digital entrepreneurship, contrasted with the reality on the ground in local ecosystems. In recent years, Africa has seen a digital entrepreneurship boom, with hundreds of millions of dollars poured into tech cities, entrepreneurship trainings, coworking spaces, innovation prizes, and investment funds. Politicians and technologists have offered Silicon Valley-influenced narratives of boundless opportunity and exponential growth, in which internet-enabled entrepreneurship allows Africa to "leapfrog" developmental stages to take a leading role in the digital revolution. This book contrasts these aspirations with empirical research about what is actually happening on the ground. The authors find that although the digital revolution has empowered local entrepreneurs, it does not untether local economies from the continent's structural legacies.

### Frontiers in Social Innovation The Business Year

Time to discuss anti-BEPS measures around digitalization In the course of the BEPS Report on Action 1, it was concluded that there was no instantaneous need for specific rules to address base erosion and profit shifting (BEPS) made possible by the digitalization of enterprises and new digital businesses. At the same time, it was acknowledged that general measures may not suffice with the assessment of results to begin in 2020. While awaiting possible fundamental reforms of the tax framework, it is time to discuss anti-BEPS measures bearing in mind the peculiar features of the digital economy such as increased mobility, no need for physical presence, and dematerialization. The Book focuses on five key areas of interest: International Tax Policy Tax Treaty Law Transfer Pricing Indirect Taxation Issues EU Law "Taxation in a Global Digital Economy" analyses the issues and addresses the five key areas of interest from various viewpoints.

### Spore 195: Smart farming - Transforming Agriculture with Artificial Intelligence Springer Nature

This book explores the intersection of public policy and the fast changing digital media economy. Over the last 20 years, digital technologies and digital content have revolutionized many aspects of social, economic and political life around the world. Governments, locked into the policies and programs of the traditional economy, are struggling to respond to this dynamic and commercially unique global ecosystem. This study examines the nature and extent of the digital economy, looking at both the commercial diversity within the sector and the different digital implementations across the world. While the digital engagement of North America is well known, the scale and intensity of digital growth in East Asia is not fully understood not are the transformative changes occurring in parts of Africa. The digital world is marked by the unexpected and rapid re-orientation of economic, social, cultural and political affairs. The digitization of work, for example, has

already brought major disruptions within national economies. Governments are struggling to respond, in part because of pressures from the traditional industrial and resource sectors but also because of the unique, somewhat anarchistic nature of the digital content industry. The Global Digital Economy provides a profile of the global digital environment, reviews current government digital policies (with an emphasis on innovative strategies), and offers policy suggestions for national and subnational governments. Countries that respond creatively to the digital economy—like Taiwan, South Korea, Finland and Israel—stand to prosper from the anticipated accelerated growth of the sector. Those nations that struggle to keep pace with the digital infrastructure needs of the new economy and with the potential for employment and business creation stand to fall behind economically. This book provides a policy roadmap for the digital economy and identifies the risks and opportunities of this core sector in the twenty-first-century economy.

#### The Global Digital Economy: A Comparative Policy Analysis

Harvard Business Press

This book is reflective of a science-based vision of the future development paradigm of economic and social systems. It deals with the digitization as the technological basis for the future development of economic and social systems and presents a review of groundbreaking technologies and prospects for their application. The specific character of the industry and prospects for the application of digital technologies in business are analyzed.

A rationale is provided for future prospects for the sustainable development of economic and social systems in a digital economy.

The authors determine the process of the formation and development of the information-oriented society, social and educational aspects of the digitization, as well as the institutional framework of the digital future of social and economic systems.

The book combines the best works following the results of the 12th International Research-to-Practice Conference “ Artificial Intelligence: Anthropogenic Nature vs. Social Origin ” that was held by the Institute of Scientific Communications (ISC) in cooperation with the Siberian Federal University and the Krasnoyarsk Regional Fund of support of scientific and scientific – technical activities on 5 – 7 December 2019, in Krasnoyarsk, Russia, as well as following the results of the 3rd International Research-to-Practice Conference “ Economic and Social Systems: Paradigms for the Future ” that was held by the ISC in cooperation with the Pyatigorsk State University on 5 – 6 February 2020. The target audience of the book consists of representatives of the academic community concerned with the future prospects for the development of economic and social systems, as well as economic agents engaged in the digitization of business processes, and representatives of public agencies regulating the development of business systems for their progressivity, sustainability and competitiveness.

#### Understanding the New Global Economy Routledge

Systemic change is required to move to a circular economy (CE) model which can meet the demands of a growing population in a manner that is decoupled from resource use and waste generation.

This book takes a deep dive into the innovation aspect of the circular economy (CE), with a specific focus on India as a geography, where the transformation to a circular economy is underway. How a developing country like India is tackling the complexities of the transformation and creating innovative solutions is showcased in this book through many practical examples and inspirational case studies. The book lays out the foundations for mainstreaming resource efficiency (RE)/CE in India, and covers innovation led by businesses and start-ups, along with the innovative policies, financing, and collaborative models required to spur and accelerate circular economy approaches, while also providing linkages to the international context.

Features: Provides insight into the role of innovation in the

circular economy transition; Helps to develop and facilitate adoption of resource-efficiency policy and strategy with particular focus on key resource sectors and waste streams; Treats the circular economy as a holistic approach across the entire lifecycle, and places emphasis on upstream interventions and systems change; Examines the current context of COVID-19 and its impact on circular economy models and practices; Touches upon how the EU-based approach was adapted and contextualised significantly to work in the unique Indian landscape. This book is aimed at students, researchers, and professionals engaged in the domains of circular economy, sustainability, business innovation, environmental studies, natural resources management, and environmental and resource conservation policy.

#### Distributed Leadership and Digital Innovation Routledge

This is the first book-length treatment of the advancement of EU global data flows and digital trade through the framework of European institutionalisation. Drawing on case studies of EU-US, EU-Japan and EU-China relations it charts the theoretical and empirical approaches at play. It illustrates how the EU has pioneered high standards in data flows and how it engages in significant digital trade reforms, committed to those standards.

The book marks a major shift in how institutionalisation and the EU should be viewed as it relates to two of the more extraordinary areas of global governance: trade and data flows. This significant book will be of interest to EU constitutional lawyers, as well as those researching in the field of IT and data law.

Led by Professor Lester-Irabinna Rigney, *Global Perspectives and New Challenges in Culturally Responsive Pedagogies* brings together diverse communities of education research in an innovative way to develop a nuanced understanding of the relationship between education and democracy. This book synthesises a range of theoretical, conceptual, and empirical approaches to address the complex challenges faced by young people and societies in the 21st century. Each chapter provides accounts of local inclusive encounters in education, while engaging with global debates and issues, such as racism, neoliberalism, de-colonisation, new colonialism, de-democratisation, and growing social, economic, and educational inequality. This book presents new ways of thinking about democracy, local – global enactments of culturally responsive pedagogies through teaching and learning, and future thinking for a new era. Bringing together diverse, Australian, and international perspectives, this book will be relevant to educators, researchers, and policy makers who are interested in Indigenous education, educational sociology, de-coloniality, cultural safety, critical pedagogy, and education leadership theory.

Digital commerce – the use of computer networks to facilitate transactions involving the production, distribution, sale, and delivery of goods and services – has grown from merely streamlining relations between consumer and business to a much more robust phenomenon embracing efficient business processes within a firm and between firms. Inevitably, the related taxation issues have grown as well. This latest edition of the preeminent text on the taxation of digital transactions revises, updates and expands the book's coverage. It includes a detailed and up-to-date analysis of income tax and VAT developments regarding digital commerce under the OECD and G20 Base Erosion and Profit Shifting (BEPS) reforms. It explores the implications of digital commerce for US state sales and use tax regimes

resulting from the 2018 US Supreme Court decision in *Wayfair*. It discusses cross-border tax in the United States while continuing to focus on tax developments throughout the world. Analysing the practical tax consequences of digital commerce from a multijurisdictional perspective, and using examples to illustrate the application of different taxes to digital commerce transactions, the book offers in-depth treatment of such topics as the following: how tax rules governing cross-border digital commerce are increasingly applied to all cross-border activities; how tax rules and institutional processes have evolved to confront challenges posed by digital commerce; how an emerging 'tax war' is developing whereby different countries are unilaterally imposing new tax rules on cross-border digital commerce; how technology enhances tax and cross-border tax information exchanges; how technology reduces both compliance and enforcement costs; cross-border consumption tax issues raised by cloud computing; and different approaches to the legal design of VAT place of taxation rules. The authors offer insightful views on the likely development of new approaches to taxing cross-border digital commerce. This edition, while building on the analysis of the relationship between traditional tax laws and the Internet in the first edition and its predecessors, contains a more explicit and systematic consideration of digital commerce issues and the ongoing policy responses to them. Tax professionals and academics everywhere will welcome the important contribution it makes towards the design of cross-border tax rules that are both conceptually sound and practical in application. 'A tour de force ... much larger and richer than its predecessors ... a massive contribution to the growing literature on the taxation of e-commerce.' – Rita de la Feria, *British Tax Review* 'Provides important understandings for ongoing policy discussions ... The ongoing economic and financial digitalization is making individual data a key input and source of value for companies across sectors, from bigtechs and pharmaceuticals to manufacturers and financial services providers. Data on human behavior and choices—our "likes," purchase patterns, locations, social activities, biometrics, and financing choices—are being generated, collected, stored, and processed at an unprecedented scale.

*Digital Strategies in a Global Market* Taylor & Francis

It has been nearly ten years since *Africa is Open for Business* was first published and Victor Kgomoewana showcased the continent as a place of opportunity and fertile ground for business. But, if recent headlines are anything to go by, then the current outlook seems dim. As a result of corruption, the deepening infrastructure backlog, including resistance to 4IR developments, and the current global pandemic, it seems the continent is fast running out of time. However, when asked if Africa is still open for business, Kgomoewana confidently says, 'It depends on your perspective.' *Africa Bounces Back* draws on case studies that look at the continent's response to COVID-19 and where it might leave us, how the shift from globalisation to more nationalist politics could impact the region amidst growing global terror and the tipping point of the African Continental Free Trade Area implementations. Kgomoewana also revisits previous case studies, including Ethiopian Airlines, China's ongoing involvement in Africa and the 'new normal' innovations that have caused much-needed disruptions in their sectors. *Africa Bounces Back* is a reminder that even in the mist of crisis, a resilient spirit, decisive action and the correct perspective can lead to progress and, ultimately, success.

This book addresses the current crisis that threatens the rule of law and has led to the need for its adjustment as normative concept, legal principle and pragmatic guideline for the behaviour of political players. Rule of law is a pillar of the constitutional orders and a key principle of national, international and EU law. Yet, rule of law is subject to pressure for change in the face of emergency, crisis and transition. This book explores how constitutional crisis, emergency constitutionalism and constitutional polycrisis assert pressures for the transformation of

rule of law and thus produce a state of flux. It examines the rule of law from the viewpoint of constitutional imaginaries, memory politics and identity politics. It critically assesses the responses given by the EU and its member states to the current crisis. The work also provides an analysis of the most important challenges to rule of law stemming from the performance of constitutional courts, including the risks of judicial activism, politicization of the courts and judicialization of politics. The book will be an invaluable resource for researchers, academics and policy-makers working in the areas of Constitutional Law and Political Science. *Technologies for Modern Digital Entrepreneurship* Kluwer Law International B.V.

*The EU as a Global Digital Actor* CRC Press

This book is a substantial re-write of the author's earlier book on management consultancy that has established itself as a leading book on this topic. This re-write focuses upon the analysis of the impact of e-business on the consulting industry as well as examining the changing structure of the industry and emerging segmentation. It also includes recent material on the efforts of consulting firms to manage knowledge more effectively and includes new and more examples and interviews.

*The Global Findex Database 2017* University of Michigan Press

In 2011 the World Bank—with funding from the Bill and Melinda Gates Foundation—launched the Global Findex database, the world's most comprehensive data set on how adults save, borrow, make payments, and manage risk. Drawing on survey data collected in collaboration with Gallup, Inc., the Global Findex database covers more than 140 economies around the world. The initial survey round was followed by a second one in 2014 and by a third in 2017. Compiled using nationally representative surveys of more than 150,000 adults age 15 and above in over 140 economies, *The Global Findex Database 2017: Measuring Financial Inclusion and the Fintech Revolution* includes updated indicators on access to and use of formal and informal financial services. It has additional data on the use of financial technology (or fintech), including the use of mobile phones and the Internet to conduct financial transactions. The data reveal opportunities to expand access to financial services among people who do not have an account—the unbanked—as well as to promote greater use of digital financial services among those who do have an account. The Global Findex database has become a mainstay of global efforts to promote financial inclusion. In addition to being widely cited by scholars and development practitioners, Global Findex data are used to track progress toward the World Bank goal of Universal Financial Access by 2020 and the United Nations Sustainable Development Goals. The database, the full text of the report, and the underlying country-level data for all figures—along with the questionnaire, the survey methodology, and other relevant materials—are available at [www.worldbank.org/globalindex](http://www.worldbank.org/globalindex).

The application of digital information and communication

---

technologies (ICTs) to reform governmental structures and public service is widely and perhaps naively viewed as the 21st century "savior", the enlightened way to reinvigorate democracy, reduce costs, and improve the quality of public services. This book examines the transition from e-government to digital governance in light of the financial exigencies and political controversies facing many governments. The chapters concentrate on strategies for public sector organizational transformation and policies for improved and measurable government performance in the current contentious political environment. This fully updated second edition of *Digital Governance* provides strategies for public officials to apply advanced technologies, manage remote workforces, measure performance, and improve service delivery in current crisis-driven administrative and political environments. The full implementation of advanced digital governance requires fundamental changes in the relationship between citizens and their governments, using ICTs as catalysts for political as well as administrative communication. This entails attitudinal and behavioral changes, secure networks, and less dependence on formal bureaucratic structures (covered in Part I of this book); transformation of administrative, educational, and security systems to manage public services in a more citizen-centric way (covered in Part II); the integration of advanced digital technologies with remote broadband wireless internet services (Part III); and the creation of new forms of global interactive citizenship and self-governance (covered in Part IV). Author Michael E. Milakovich offers recommendations for further improvement and civic actions to stimulate important instruments of governance and public administration. This book is required reading for political science, public administration, and public policy courses, as well as federal, state, and local government officials.
