This book addresses the current crisis that threatens the rule of law and has led to the need for its adjustment as normative concept, legal principle and pragmatic guideline for the behaviour of political players. Rule of law is a pillar of the constitutional orders and a key principle of national, international and EU law. Yet, rule of law is subject to pressure for change in the face of emergency, crisis and transition. This book explores how constitutional crisis, emergency constitutionalism and constitutional polycrisis assert pressures for the transformation of rule of law and thus produce a state of flux. It examines the rule of law from the viewpoint of constitutional imaginaries, memory politics and identity politics. It critically assesses the responses given by the EU and its member states to the current crisis. The work also

provides an analysis of the most important challenges to rule of law stemming from the performance of constitutional courts, including the risks of judicial activism, politicization of the courts and judicialization of politics. The book will be an invaluable resource for researchers, academics and policy-makers working in the areas of Constitutional Law and Political Science.

[Emerging Developments and Technologies in Digital Government](#)

Harvard Business Press This book is reflective of a science-based vision of the future development paradigm of economic and social systems. It deals with the digitization as the technological basis for the future development of economic and social systems and presents a review of groundbreaking technologies and

prospects for their application. The specific character of the industry and prospects for the application of digital technologies in business are analyzed. A rationale is provided for future prospects for the sustainable development of economic and social systems in a digital economy. The authors determine the process of the formation and development of the information-oriented society, social and educational aspects of the digitization, as well as the institutional framework of the digital future of social and economic systems. The book combines the best works following the results of the 12th International Research-to-Practice Conference “Artificial Intelligence: Anthropogenic Nature vs. Social Origin” that was held by the Institute of Scientific Communications (ISC) in cooperation with the Siberian Federal University and the Krasnoyarsk Regional Fund of support of scientific and scientific – technical activities on 5 – 7 December 2019, in Krasnoyarsk, Russia, as well as following the results of the 3rd

International Research-to-Practice Conference “Economic and Social Systems: Paradigms for the Future” that was held by the ISC in cooperation with the Pyatigorsk State University on 5 – 6 February 2020. The target audience of the book consists of representatives of the academic community concerned with the future prospects for the development of economic and social systems, as well as economic agents engaged in the digitization of business processes, and representatives of public agencies regulating the development of business systems for their progressivity, sustainability and competitiveness. *Going digital for noncommunicable diseases* Springer Nature Transforming Agriculture with Artificial Intelligence. This book provides a nuanced exploration of contemporary digital data governance, highlighting the importance of

cooperation across sectors and disciplines in order to adapt to a rapidly evolving technological landscape. Most of the theory around global digital data governance remains scattered and focused on specific actors, norms, processes, or disciplinary approaches. This book argues for a polycentric approach, allowing readers to consider the issue across multiple disciplines and scales. Polycentrism, this book argues, provides a set of lenses that tie together the variety of actors, issues, and processes intertwined in digital data governance at subnational, national, regional, and global levels. Firstly, this approach uncovers the complex array of power centers

and connections in digital data governance. Secondly, polycentric perspectives bridge disciplinary divides, challenging assumptions and drawing together a growing range of insights about the complexities of digital data governance. Bringing together a wide range of case studies, this book draws out key insights and policy recommendations for how digital data governance occurs and how it might occur differently. Written by an international and interdisciplinary team, this book will be of interest to students and scholars in the field of development studies, political science, international relations, global studies, science and technology studies, sociology,

and media and communication studies. *Africa Bounces Back* World Bank Publications Digital media histories are part of a global network, and South Asia is a key nexus in shaping the trajectory of digital media in the twenty-first century. Digital platforms like Facebook, WhatsApp, and others are deeply embedded in the daily lives of millions of people around the world, shaping how people engage with others as kin, as citizens, and as consumers. Moving away from Anglo-American and strictly national frameworks, the essays in this book explore the intersections of local, national, regional, and global forces that shape contemporary digital culture(s) in regions like South Asia: the rise of digital and mobile media technologies, the ongoing transformation of established media industries, and emergent forms of

digital media practice and use that are reconfiguring sociocultural, political, and economic terrains across the Indian subcontinent. From massive state-driven digital identity projects and YouTube censorship to Tinder and dating culture, from Twitter and primetime television to Facebook and political rumors, Global Digital Cultures focuses on enduring concerns of representation, identity, and power while grappling with algorithmic curation and data-driven processes of production, circulation, and consumption. It has been nearly ten years since Africa is Open for Business was first published and Victor Kgomoewana showcased the continent as a place of opportunity and fertile ground for business. But, if recent headlines are anything to go by, then the current outlook seems dim. As a result of corruption, the deepening infrastructure backlog, including resistance to 4IR developments, and the current global pandemic, it seems the continent is fast running out of time. However, when asked if Africa is still open for business, Kgomoewana confidently says, 'It depends on your perspective.' Africa Bounces Back draws on case studies that look at the continent's response to COVID-19 and where it might leave us, how the shift from globalisation to more nationalist politics could impact the region amidst growing global terror and the tipping point of the African Continental Free Trade Area implementations. Kgomoewana also revisits previous case studies, including Ethiopian Airlines, China's ongoing involvement in Africa and the 'new normal' innovations that have caused much-needed disruptions in their sectors. Africa Bounces Back is a reminder that even in the mist of crisis, a resilient spirit, decisive action and the correct perspective can lead to progress and, ultimately, success. A multidisciplinary and timely presentation of digital communication and multimodal texts from the perspective of media linguistics. Optimizing Digital Solutions for Hyper-Personalization in Tourism and Hospitality World Health Organization

The application of digital information and communication technologies (ICTs) to reform governmental structures and public service is widely and perhaps naively viewed as the 21st century "savior", the enlightened way to reinvigorate democracy, reduce

costs, and improve the quality of public services. This book examines the transition from e-government to digital governance in light of the financial exigencies and political controversies facing many governments. The chapters concentrate on strategies for public sector organizational transformation and policies for improved and measurable government performance in the current contentious political environment. This fully updated second edition of *Digital Governance* provides strategies for public officials to apply advanced technologies, manage remote workforces, measure performance, and improve service delivery in current crisis-driven administrative and political environments. The full implementation of advanced digital governance requires fundamental changes in the relationship between citizens and their governments, using ICTs as catalysts for political as well as administrative communication. This entails attitudinal and behavioral changes, secure networks, and less dependence on formal bureaucratic structures (covered in Part I of this book); transformation of administrative, educational, and security systems to manage public services in a more citizen-centric way (covered in Part II); the integration of advanced digital technologies with remote broadband wireless internet services (Part III); and the creation of new forms of global interactive citizenship and self-governance (covered in Part IV). Author Michael E. Milakovich offers recommendations for further improvement and civic actions to stimulate important instruments of governance and public administration. This book is required reading for political science, public administration, and public policy courses, as well as federal, state, and local government officials. *Understanding the Digital Transformation of Socio-Economic-Technological Systems* University of Michigan Press

As hyper-personalization has yet to be perfected, developing hyper-personalized strategies presents a critical

challenge; due to this, optimizing hyper-personalization and designing new processes and business models takes center stage in tourism and hospitality to reach new levels of customer service and experience through the introduction and development of new solutions supported in the internet of things, software interfaces, artificial intelligence solutions, back-end and front-end management tools, and other emergent business intelligence strategies. *Optimizing Digital Solutions for Hyper-Personalization in Tourism and Hospitality* serves as an essential reference source that emphasizes the importance of hyper-personalization models, processes, strategies, and issues within tourism and hospitality fields with a particular focus on digital IT solutions. More than a simple starting point for a critical reflection on the state of the art of this sector, this book aims to contribute in an objective way to leveraging digital solutions to optimize the concept of hyper-personalization in the tourist experience. The content of this book covers research topics that include digital tourism and hospitality, consumer behavior, customer journey, and smart technologies and is ideal for professionals, executives, hotel managers, event coordinators, restaurateurs, travel agents, tour directors, policymakers, government officials, industry professionals, researchers, students, and academicians in the fields of tourism and hospitality management, marketing, and communications.

In 2011 the World Bank—with funding from the Bill and Melinda Gates Foundation—launched the Global Findex database, the world's most comprehensive data set on how adults save, borrow, make payments, and manage risk. Drawing on survey data collected in collaboration with Gallup, Inc., the Global Findex database covers more than 140 economies around the world. The initial survey round was followed by a second one in 2014 and by a third in 2017. Compiled using nationally representative surveys of more than 150,000 adults age 15 and above in over 140 economies, The Global

Findex Database 2017: Measuring Financial Inclusion and the Fintech Revolution includes updated indicators on access to and use of formal and informal financial services. It has additional data on the use of financial technology (or fintech), including the use of mobile phones and the Internet to conduct financial transactions. The data reveal opportunities to expand access to financial services among people who do not have an account—the unbanked—as well as to promote greater use of digital financial services among those who do have an account. The Global Findex database has become a mainstay of global efforts to promote financial inclusion. In addition to being widely cited by scholars and development practitioners, Global Findex data are used to track progress toward the World Bank goal of Universal

Financial Access by 2020 and the United Nations Sustainable Development Goals. The database, the full text of the report, and the underlying country-level data for all figures—along with the questionnaire, the survey methodology, and other relevant materials—are available at www.worldbank.org/globalfindex.

Note: this is an abridged version of the original book with references removed. The complete edition is also available. This book explores the intersection of public policy and the fast changing digital media economy. Over the last 20 years, digital technologies and digital content have revolutionized many aspects of social, economic and political life around the world. Governments, locked into the policies and programs of the

traditional economy, are struggling to respond to this dynamic and commercially unique global ecosystem. This study examines the nature and extent of the digital economy, looking at both the commercial diversity within the sector and the different digital implementations across the world. While the digital engagement of North America is well known, the scale and intensity of digital growth in East Asia is not fully understood not are the transformative changes occurring in parts of Africa. The digital world is marked by the unexpected and rapid re-orientation of economic, social, cultural and political affairs. The digitization of work, for example, has already brought major disruptions within national economies. Governments are struggling to respond, in part because of pressures from the traditional

industrial and resource sectors but also because of the unique, somewhat anarchistic nature of the digital content industry. The Global Digital Economy provides a profile of the global digital environment, reviews current government digital policies (with an emphasis on innovative strategies), and offers policy suggestions for national and subnational governments. Countries that respond creatively to the digital economy--like Taiwan, South Korea, Finland and Israel--stand to prosper from the anticipated accelerated growth of the sector. Those nations that struggle to keep pace with the digital infrastructure needs of the new economy and with the potential for employment and business creation stand to fall behind economically. This book provides a policy roadmap for the digital economy

and identifies the risks and opportunities of this core sector in the twenty-first-century economy.

The dynamics of the world's pervasive digital technologies is transforming organisations and enabling enterprises to create sustainable competitive advantage. This presents huge economic opportunities for Africa. This book responds to the need for African enterprises and organisations—particularly those in the service sector—to fully exploit the inherent potential in digital platforms by putting in place processes to respond effectively to changing consumer demands. Digital service delivery is conceptualised as a key driver of effective management and service delivery across the value chain of businesses. The authors offer insights into the opportunities, drivers, structures, and

models of digital service delivery specific to the African context, using case studies and country-based themes that highlight how the adoption of digital platforms and practices can transform service delivery for value-creation. The book examines the scope and applications of digital businesses, emphasising the emergence, value-creation, and strategic implications for Africa's private and public enterprises. Students, entrepreneurs, IT innovators, academics, and policymakers will gain a greater understanding of how digitalisation is shaping consumer expectations, industry practices, and service delivery in Africa.
