This book is about the end times. The aim of this book is to bring clarity and to counter confusion in the lives of many Christians regarding the end-times, especially regarding the prophetic time we live in at this moment. Clarity will equip and enable God's children to follow His vision for, and in this time period we are living in right now. It will enable them to report for duty. It will enable them to become mighty instruments in His hand. End-time ministry does not only mean that God is at work. It also means that we have some part to play in order to enable God to carry out His plans. This report will enable God's children to stand up and be counted".

[Why Do We Hurt Ourselves?](#)

Simon and Schuster

Why We Are the Way We Are answers questions like: Why are our relationships are so difficult? Full of conflict? Why do we often feel hurt? Don't feel loved? Don't feel acknowledged? Why those around us sometimes act in unloving, hurtful, or aggressive ways? Have you ever wondered why the world is the way it is? Why ... guides us to better understand ourselves, and take charge of our life and express ourselves properly so that we feel energized and empowered. It also shows us how to better understand and communicate with those close to us in ways that create more harmonious relationships. Why ... explains why we often feel

bad, uninspired, apathetic, lash out at people, or get hurt by others. It shows us how to deal with those who behave badly around us, towards others, and how to make peace with people who have different ways of being or beliefs than we do. With its few simple worksheets, "Why ..." helps us to uncover any habitual thought, reactive, or behavioral patterns we may hold - and may not even be aware of, but that are holding us back from being our Best Self. (Book 2, "Becoming Our Best Self" delves more deeply into this and will be out Fall 2019). These new understandings also inspire us to no longer judge, blame, or criticize those around us, creating more peace and harmony in our lives and relationships. Making peace with others and having a peaceful existence is no small thing. This book also explains how to make peace with the world around us - especially when we see negativity splashed all over the newscasts. Why ... shows us that even small shifts to positive, loving, fair, and inclusive attitudes and behaviors not only help us and our relationships, but that they also help the world as a whole. This first book in 'Our Journeys to Peace' Series also explains how Humanity, we, and others, got to be the way we are, why the world is the way it is, and how we perpetrate this - individually and collectively.

"Every attempt to help people must first begin with an effort to understand people," says Dr. Larry Crabb. "And the only fully reliable source of information on that topic is the Bible." In this Gold Medallion Award-winning classic, Dr. Crabb affirms the power of the Scriptures to address the intricacies and deep needs of the human heart.

Exploring the inseparable link between spiritual and psychological realities, Understanding People offers a vital lens on how we're put together—who we really are and what makes us tick in our relationships with other people, with God, and with ourselves. In three parts, this book first points us to the Bible as our source of insight into perplexing heart issues. Then it helps us come to grips with our brokenness as God's image-bearers, and it shows how we can reclaim our ability to reflect him in our growth toward maturity and healed relationships.

Realist Challenges to Metaphysical Neutralism ABC-CLIO

Understand, avoid, and defeat the subconscious causes of your irrational and self-defeating behaviors. It's only human nature. A psychological trigger is something that causes us to act out of urgency - not correctness or even happiness. It's a switch that is flipped outside of our consciousness. This is fertile ground for some of the worst decisions of our lives. Seize control and of your impulses and make better decisions. Psychological Triggers is an introduction to yourself - your impulses, your desires, and everything in your subconscious that drives you to action. It answers the question, "Why did I just make a terrible choice when I know I shouldn't have?" We are all slaves to our triggers, and this book seeks to identify them to better battle them. We might think we are making our decisions independently and out of free will, but you'll discover

that to be far from reality. Master your psychology, master your life. Peter Hollins has studied psychology and peak human performance for over a dozen years and is a bestselling author. He has worked with a multitude of individuals to unlock their potential and path towards success. His writing draws on his academic, coaching, and research experience. Think clearly and triumph over your human nature.

- The triggering effects of social pressure and conformity.
- How everyday emotions are behind some of the most powerful triggers.
- Natural, biological, evolutionary human drives - can you regulate them?
- Simple thinking traps we all fall victim to.
- The notion of free will and whether it truly exists.

Why We Do what We Do MIT Press

An exploration of what we can know about what we don't know: why ignorance is more than simply a lack of knowledge. Ignorance is trending. Politicians boast, "I'm not a scientist." Angry citizens object to a proposed state motto because it is in Latin, and "This is America, not Mexico or Latin America." Lack of experience, not expertise, becomes a credential. Fake news and repeated falsehoods are accepted and shape firm belief. Ignorance about American government and history is so alarming that the ideal of an informed citizenry now seems quaint. Conspiracy theories and false knowledge thrive. This may be the Information Age, but we do not seem to be well informed. In this book, philosopher Daniel DeNicola explores ignorance—its abundance, its endurance, and its consequences. DeNicola aims to understand ignorance, which seems at first paradoxical. How can the unknown become known—and still be unknown? But he argues that ignorance is more than a lack or a void, and that it has dynamic and complex interactions with knowledge. Taking a broadly philosophical approach, DeNicola examines many forms of ignorance, using the metaphors of ignorance as place, boundary, limit, and horizon. He treats willful ignorance and describes the culture in which ignorance becomes an ideological stance. He discusses the ethics of ignorance, including the right not to know, considers the supposed virtues of ignorance, and concludes that there are situations in which ignorance is morally good. Ignorance is neither pure nor simple. It is both an accusation and a defense ("You are ignorant!" "Yes, but I didn't know!"). Its practical effects range from the inconsequential to the momentous. It is a scourge, but, DeNicola argues daringly, it may also be a refuge, a value, even an accompaniment to virtue.

**"Why We Drop Out"** Abbott Press

One of The New York Times Book Review's "10 Best Books of 2021" Shortlisted for the 2021 International Booker Prize A fictional examination of the lives of real-life scientists and thinkers whose discoveries resulted in moral consequences beyond their imagining. When We Cease to Understand the World is a book about the complicated links between scientific and mathematical discovery, madness, and destruction. Fritz Haber, Alexander Grothendieck, Werner Heisenberg, Erwin Schrödinger—these are some of luminaries into whose troubled lives Benjamín Labatut thrusts the reader, showing us how they grappled with the most profound questions of existence. They have strokes of unparalleled genius, alienate friends and lovers, descend into isolation and insanity. Some of their discoveries reshape human life for the better; others pave the way to chaos and unimaginable suffering. The lines are never clear. At a breakneck pace and with a wealth of disturbing detail, Labatut uses the imaginative resources of fiction to tell the stories of the scientists and mathematicians who expanded our notions of the possible.

*Understanding Why We and Others Act the Way We Do, and Why Humanity Is the Way It Is* Penguin

- What's happening in the world lately?
- How can I be happy when so many are not?
- Is life about following your heart or taking what's served to you?
- Who were the prophets, what are angels, and what happens when we die?
- What happened to our ancient civilizations, do secret societies have any real secrets, and are aliens now visiting us?
- What's real? What matters? Who says? Who cares?
- How do we know or find our purpose? Many of us ask ourselves these questions, and many more, as we go through our days and try to make sense of our lives. Mike Dooley asks them too, except . . . his questions get answered. Wisely. Compassionately. Fully. One such answer explained its source, stating that we all have a higher self within that predates this life and will live beyond it, and thus it knows a whole lot more than we do about where we've been, why we're here, and what will likely happen next on planet Earth. Life on Earth takes the form of a journal in which Mike asks what's on his mind during pivotal times in his life. As one of today's most respected New Thought leaders and reality theorists, he offers a lofty platform for this wide-ranging dialogue that powerfully expands our perspectives on essential truths, taking on topics such as:
- Why and how to see through the "illusions" of life on earth
- How to make sense of natural disasters and man-made tragedies
- Living deliberately, creating consciously, and finding your power
- Wealth, relationships, "past lives," and the evolution of consciousness
- The ultimate reason for life on earth (it's shockingly simple)

These are questions asked from the heart with a cautious, even suspicious, mind. Mike explores the subtleties of the replies in depth and detail using his trademark wit and realism, in this intrepid explorer's guide to the jungles of time and space.

Educational practice does not, for the most part, rely on research findings. Instead, there's a preference for relying on our intuitions about what's best for learning. But relying on intuition may be a bad idea for teachers and learners alike. This accessible guide helps teachers to integrate effective, research-backed strategies for learning into their classroom practice. The book explores exactly what constitutes good evidence for effective learning and teaching strategies, how to make evidence-based judgments instead of relying on intuition, and how to apply findings from cognitive psychology directly to the classroom. Including real-life examples and case studies, FAQs, and a wealth of engaging illustrations to explain complex concepts and emphasize key points, the book is divided into four parts: Evidence-based education and the science of learning Basics of human cognitive processes Strategies for effective learning Tips for students, teachers, and parents. Written by "The Learning Scientists" and fully illustrated by Oliver Caviglioli, *Understanding How We Learn* is a rejuvenating and fresh examination of cognitive psychology's application to education. This is an essential read for all teachers and educational practitioners, designed to convey the concepts of research to the reality of a teacher's classroom.

From the author of *When Bad Things Happen to Good People* comes an inspiring new bestseller that puts human feelings of guilt and inadequacy in perspective - and teaches us how we can learn to accept ourselves and others even when we and they are less than perfect. *How Good Do We Have to Be?* is for everyone who experiences that sense of guilt and disappointment. Harold Kushner, writing with his customary generosity and wisdom, shows us how human life is too complex for anyone to live it without making mistakes, and why we need not fear the loss of God's love when we are less than perfect. Harold Kushner begins by offering a radically new interpretation of the story of Adam and Eve, which he sees as a tale of *Paradise Outgrown* rather than *Paradise Lost*: eating from the Tree of Knowledge was not an act of disobedience, but a brave step forward toward becoming human, complete with the richness of work, sexuality and child-rearing, and a sense of our mortality. Drawing on modern literature, psychology, theology,,and his own thirty years of experience as a congregational rabbi, Harold Kushner reveals how acceptance and forgiveness can change our relationships with the most important people in our lives and help us meet the bold and rewarding challenge of being human.

*Understanding Sustainable Architecture* is a review of the assumptions, beliefs, goals and bodies of knowledge that underlie the endeavour to design (more) sustainable buildings and other built developments. Much of the available advice and rhetoric about sustainable architecture begins from positions where important ethical, cultural and conceptual issues are simply assumed. If sustainable architecture is to be a truly meaningful pursuit then it must be grounded in a coherent theoretical framework. This book sets out to provide that framework. Through a series of self-reflective questions for designers, the authors argue the ultimate importance of reasoned argument in ecological, social and built contexts, including clarity in the problem framing and linking this framing to demonstrably effective actions. Sustainable architecture, then, is seen as a revised conceptualisation of architecture in response to a myriad of contemporary concerns about the effects of human activity. The aim of this book is to be transformative by promoting understanding and discussion of commonly ignored assumptions behind the search for a more environmentally sustainable approach to development. It is argued that design decisions must be based on both an ethical position and a coherent understanding of the objectives and systems involved. The actions of individual designers and appropriate broader policy settings both follow from this understanding.

**Understanding Social Signals: How Do We Recognize the Intentions of Others?** Back Bay Books

This volume examines mathematics as a product of the human mind and analyzes the language of "pure mathematics" from various advanced-level sources. Through analysis of the foundational texts of mathematics, it is demonstrated that math is a complex literary creation, containing objects, actors, actions, projection, prediction, planning, explanation, evaluation, roles, image schemas, metonymy, conceptual blending, and, of course, (natural) language. The book follows the narrative of mathematics in a typical order of presentation for a standard university-level algebra course, beginning with analysis of set theory and mappings and continuing along a path of increasing complexity. At each

stage, primary concepts, axioms, definitions, and proofs will be examined in an effort to unfold the tell-tale traces of the basic human cognitive patterns of story and conceptual blending. This book will be of interest to mathematicians, teachers of mathematics, cognitive scientists, cognitive linguists, and anyone interested in the engaging question of how mathematics works and why it works so well.

*A New Understanding of Guilt and Forgiveness* Harper Collins

The startling new science behind sudden acts of violence and the nine triggers this groundbreaking researcher has uncovered We all have a rage circuit we can't fully control once it is engaged as R. Douglas Fields, PhD, reveals in this essential book for our time. The daily headlines are filled with examples of otherwise rational people with no history of violence or mental illness suddenly snapping in a domestic dispute, an altercation with police, or road rage attack. We all wish to believe that we are in control of our actions, but the fact is, in certain circumstances we are not. The sad truth is that the right trigger in the right circumstance can unleash a fit of rage in almost anyone. But there is a twist: Essentially the same pathway in the brain that can result in a violent outburst can also enable us to act heroically and altruistically before our conscious brain knows what we are doing. Think of the stranger who dives into a frigid winter lake to save a drowning child. Dr. Fields is an internationally recognized neurobiologist and authority on the brain and the cellular mechanisms of memory. He has spent years trying to understand the biological basis of rage and anomalous violence, and he has concluded that our culture's understanding of the problem is based on an erroneous assumption: that rage attacks are the product of morally or mentally defective individuals, rather than a capacity that we all possess. Fields shows that violent behavior is the result of the clash between our evolutionary hardwiring and triggers in our contemporary world. Our personal space is more crowded than ever, we get less sleep, and we just aren't as fit as our ancestors. We need to understand how the hardwiring works and how to recognize the nine triggers. With a totally new perspective, engaging narrative, and practical advice, *Why We Snap* uncovers the biological roots of the rage response and how we can protect ourselves—and others.
